Codebook for `uk_occ_gen_unemployment.csv'
Replication materials for Baderin and Barnes, Risk and Self-Respect.

These data are originally from the Office for National Statistics, series UNEM02. We used the November 2013 release, accessed 13 Jan 2014. The ONS site has been updated but the data are archived, and can be retrieved from http://webarchive.nationalarchives.gov.uk/20160114101732/http://www.ons.gov.uk/ons/rel/lms/labour-market-statistics/november-2013/table-unem02.xls

We subset and reshape the data.

The first four variables are as follows:

pn	period number: integer marker for time period ranges from 1 (Apr-Jun 2001) to 49 (Apr-Jun 2013)
period	time period (quarter)
date	end date of the time period/quarter
uer_overall	overall unemployment rate for the time period/quarter

The remaining variables all take the form uer_x_y and indicate the gender-occupation group-specific unemployment rate as indicated in the table below. For example, uer_w_managers_senior_officials is the unemployment rate of female managers (etc).

z	Gender	y	SOC2010 Occupational group
m	Men	overall	All groups
w	Women	managers_senior_officials	Managers, directors & senior officials
		professionals	Professional occupations
		assoc_prof_technical	Associate professional & technical
		admin_sec	Administrative & secretarial
		skilled_trades	Skilled trades
		personal_services	Caring, leisure & other services
		sales_cust_serv	Sales & customer services
		proc_plant_machine_op	Process, plant & machine operatives
		elem_occ	Elementary occupations
