README

The contained files provide data and replication code for BLIS Collective's Fabric of Repair Report (2025): https://www.bliscollective.org/collect

The data were collected by Swayable in early 2025 and analyzed internally by the BLIS Collective research team (PI: Dr. Camilla Griffiths).

The data are provided as a .csv `BLIS_Swayable_2025.csv` and are merged from two waves of data collection.

The first file, `0_Data.R`, provides preliminary cleaning of the data for the report (e.g., limiting the Indigenous respondents per the sampling requirements). All other files use these cleaned data.

Files starting with `1_` through `3_` replicate Tables 1-3 of the report. Files starting with `4_` through `10_` replicates Figures 1-7 of the report. File `11_KeyReportStats.R` calculates the percentage changes used in the report from regression prediction results.

Variables and their column labels may be gleaned from the survey instrument used, provided in this replication file by Swayable. Further questions about the data/variables, methodology, and code can be directed to the PI at camilla@bliscollective.org.
