REPLICATION FILES FOR

"VOTER REACTIONS TO CANDIDATE BACKGROUND CHARACTERISTICS DEPEND ON CANDIDATE POLICY POSITIONS"

February 2019

This document describes the files needed to reproduce the results reported in the article *"Voter Reactions to Candidate Background Characteristics Depend on Candidate Policy Position."*

The replication files are as follows:

1. **Rawdata_voter_reactions**: Raw survey data received from survey company. ID numbers of respondents deleted to ensure anonymity (Microsoft Excel file format: .xlsx)
2. **Voter_reactions**: A Stata do-file, used to produce all of the empirical results reported in the article (Stata file format: .do)

To reproduce the results:

1. Download and save all replication files in "C:\Voter_reactions"
   - If files are saved elsewhere, minor adjustments may be needed in the Stata do-file.
2. Run the Stata do-file **Voter_reactions**, which uses the datafile **Rawdata_voter_reactions.**
   - NOTE: The do-file create and subsequently delete multiple Stata graphs (file format: .gph), as well as other output files. Do not store other Stata graphs in the working directory, as these will be deleted by this do-file.
