=========================================================================
Project Code: BROW0009
Project Name: Election Study
Prepared for: Susan Moffitt
Interviews: 1000
Field Period:  June 10, 2020 - June 16, 2020
Project Manager: Ashley Grosse
=========================================================================

YouGov interviewed 1100 respondents who were then matched down to a
sample of 1000 to produce the final dataset. The respondents were
matched to a sampling frame on gender, age, race, and education. The
frame was constructed by stratified sampling from the full 2018
American
Community Survey (ACS) 1-year sample with selection within strata by
weighted
sampling with replacements (using the person weights on the public use
file).

The matched cases were weighted to the sampling frame using propensity
scores. The matched cases and the frame were combined and a logistic
regression was estimated for inclusion in the frame. The propensity
score function included age, gender, race/ethnicity, years of
education,
and region. The propensity scores were grouped into deciles of the
estimated propensity score in the frame and post-stratified according
to
these deciles.

The weights were then post-stratified on 2016 Presidential vote
choice, and
a four-way stratification of gender, age (4-categories), race (4-
categories), and education (4-categories), to produce the final
weight.
