This document provides a guide to the code for the paper, “The Environmental Bias of Trade Policy,” author Joseph S. Shapiro.

The folder codeSTATA contains the Stata to produce the tables and figures. Program naming is self explanatory: 1_f1.do produces Figure 1, 1_f2.do produces Figure 2, 1_t1.do produces Table 1, etc. 0_header.do defines a few macros and parameters. The folder codeMATLAB contains the Matlab programs to produce Table 5; running the program A_ToRun.m calls on the other programs as needed. The folder dataSTATA has all the data files that the programs call on, and running the programs produces output files in the results subfolder.
