Title: “Affective Polarization: Over Time, Through the Generations, and During the Lifespan”

Authors:
Joseph Phillips, University of Kent

There are 7 files (not including this one) necessary to replicate all analyses:
1. “ANES Cumulative IE Non-Imputed.csv”
2. “anes_timeseries_cdf.dta”
3. “Appendices APCI.R”
4. “Appendices Intrinsic Estimator.do”
5. “Jennings Niemi.por”
6. “Main Analyses IE.do”
7. “Main Analyses.R”

NOTE: All analyses were executed on a MacBook Air running MacOS Big Sur 11.4. Stata Analyses were exected using StataMP 14.2. Figures were produced in RStudio 1.4.1106, using R 4.0.4 (Mac OS).

Main Analyses IE.do
This Stata .do file contains all the code necessary to produce all analyses using the Intrinsic Estimator in the main text. Requires “ANES Cumulative IE Non-Imputed.csv”.

Main Analyses.R
This is an R script containing the code necessary to produce all figures in the main text as well as their underlying analyses using the APCI model. Requires "anes_timeseries_cdf.dta"

Appendices Intrinsic Estimator.do
This State .do file contains all the code necessary to produce all analyses using the Intrinsic Estimator in the Supplemental Information. Requires “ANES Cumulative IE Non-Imputed.csv”.

Appendices APCI.R
This is an R script containing the code necessary to produce all tables and figures in the Supplemental Information as well as their underlying analyses using the APCI model. Requires "anes_timeseries_cdf.dta".
