Codebook for Open-Ended Responses

Eddy S. F. Yeung and Kai Quek

exp_group [experimental group]
1 = win-lose; no additional vignette; China
2 = win-lose; no additional vignette; Country X
3 = win-win; no additional vignette; China
4 = win-win; no additional vignette; Country X
5 = win-lose; additional vignette; China
6 = win-win; additional vignette; China
7 = win-lose; additional vignette; Country X
8 = win-win; additional vignette; Country X

supp1 [support for the proposed trade policy]
0 = oppose strongly
1 = oppose somewhat
2 = lean toward opposing
3 = lean neither way
4 = lean toward favoring
5 = favor somewhat
6 = favor strongly

supp2 [collapsed version of **supp1**]
0 = oppose strongly, oppose somewhat, lean toward opposing, or lean neither way
1 = favor strongly, favor somewhat, or lean toward favoring

open_ended [open-ended response]

content1 [categorization of open-ended responses; win-lose scenario only]
1 = self-serving preference (e.g., gains for the U.S., personal gains)
2 = other-regarding preference
3 = retaliation concern
4 = other (e.g., negative views on China or its imports, support for free trade)
12 = self-serving preference + other-regarding preference
13 = self-serving preference + retaliation concern
23 = other-regarding preference + retaliation concern
-99 = unclassified (e.g., nonsense, restating neutrality, stating inability to form an opinion due to insufficient information)

content2 [disaggregation of "other-regarding" responses]
1 = altruism / empathy
2 = equality / fairness
3 = cosmopolitanism
4 = other (e.g., ambiguous other-regarding preference, utilitarian perspective)
12 = (altruism / empathy) + (equality / fairness)
13 = (altruism / empathy) + cosmopolitanism
23 = (equality / fairness) + cosmopolitanism
