VEGETABLES - FRESH MARKET

ANNUAL SUMMARY

1964

Production of the 27 principal fresh market vegetables and melons in 1964 was 3 percent less than last year and slightly above average, the Crop Reporting Board announced today. Production was 213.9 million hundredweight compared with 221.2 million hundredweight last year and the 5-year average production of 213.4 million hundredweight. Major vegetables and melons contributing most to the decrease from last year were cantaloups, carrots, celery, sweet corn, lettuce, and watermelons. Record high tonnages of artichokes, cucumbers, and garlic were produced in 1964 and an increase over 1963 was also registered for tomatoes. Lowest production of record was recorded for asparagus, snap beans, and beets. Value of the principal vegetable and melon crops totaled 965.4 million dollars, 5 percent above last year. Tomatoes, at 177 million dollars, and lettuce, at 170 million, accounted for 36 percent of the U. S. total, about the same percentage as last year.

Strawberry production, of 549 million pounds, was 8 percent more than last year and 9 percent above average. Of the total 1964 production, 54 percent was used for fresh market and 46 percent went to processors. Estimates of mint oil, valued in 1964 at 13.3 million dollars, are also included in this report.

California continues to be the leading producer of fresh vegetables and melons. In 1964, California had nearly a fourth of the acreage, and about a third of the production and value. Florida continues to rank second in acreage, production, and value. The five leading States--California, Florida, Texas, Arizona, and New York--accounted for 62 percent of the Nation's harvested acreage in 1964, 69 percent of the production, and 73 percent of the value.

LEADING FRESH MARKET VEGETABLE STATES IN 1964

Rank	Harvested Acreage		Production		Value	
	State	Percent of total	State	Percent of total	State	Percent of total
1	California	22.8	California	31.8	California	34.6
2	Florida	15.4	Florida	15.5	Florida	18.7
3	Texas	14.1	Texas	10.4	Texas	8.3
4	Arizona	5.2	Arizona	6.3	Arizona	7.0
5	New York	4.4	New York	5.4	New York	4.7

Estimates in this publication relate primarily to fresh market production. While estimates for many vegetable crops include only fresh market production, those for a few crops, such as broccoli, cauliflower, and carrots, include substantial quantities processed. For asparagus and strawberries, which are perennial crops providing production for both fresh market and processing outlets from the same acreage, a utilization breakdown is given in addition to total production.

"Acreage for harvest" in this summary embraces total acreage available for harvest, including mature acreage abandoned or only partially harvested because of low prices or other economic factors. Planted acreage in this report includes in addition to acreage for harvest, acreage lost or abandoned due to natural causes and acreage abandoned prior to reaching maturity because of economic conditions. Acreage lost and replanted to the same crop early enough to be harvested in the season for which it was originally intended, is counted only once. Acreage lost and replanted to the same crop for harvest in a later season is considered to have been planted in both seasonal classifications but is included as acreage for harvest in the second season only. Acreage lost and replanted to another vegetable crop is included as planted

acreage in estimates for both crops but as acreage harvested for the second crop only. Both planted and harvested acreage published for asparagus and strawberries include only bearing acreage and exclude non-bearing acreage planted for harvest in future marketing seasons. Value is for the crop year and does not correspond to calendar year income. All 5-year averages of State and group totals are simple averages of annual data.

This summary provides fresh market estimates for the 27 principal vegetables and melons grown commercially in the more important producing States. These estimates provide basic statistics on over 80 percent of the national output of all vegetables and melons grown for fresh market sale. It has not been possible to include all vegetables in all States in this program.

These data are based upon information secured by State Agricultural Statisticians from growers, shippers, processors, public agencies, and other sources.
