HAWAII vegetables for fresh market: Acreage, yield, production, season average price received by growers and value, average 1949-58, annual 1959 and 1960 57

VEGETABLES--FRESH MARKET
ANNUAL SUMMARY
1960

Production of the 27 principal fresh market vegetables and melons in 1960 was 6 percent more than in 1959, the Crop Reporting Board announced today. The production of 219.3 million hundredweight compares with 207.7 million hundredweight in 1959 and the average annual production of 203.5 million hundredweight. Watermelon production, with a 15 percent increase, contributed more than any other crop to the gain over last year. Other crops with much heavier production this year than last were lettuce, cabbage, carrots and cauliflower. Three vegetables--lettuce, onions and green peppers -- set new records in production. Crops with considerably less production than last year were tomatoes, celery, sweet corn and cantaloups. Value of the principal vegetable and melon crops totaled $796,902,000, down slightly from last year but 6 percent above average. Tomatoes and lettuce, the only two crops down over 100 million dollars value, account for 36 percent of the total.

Strawberry production in 1960 at 469.5 million pounds was 1 percent below last year but 5 percent above average. A larger portion of the crop went to fresh market channels this year with a smaller percent going to processors.

Several changes in rank occurred in the five leading vegetable producing States but California still dominates the picture. In acreage, Texas moved back to second place, Florida down to third, New York up to fourth and Arizona down to fifth. Production wise, New York took over fourth place which Arizona held last year. There was no change in ranking of States according to value of production.

LEADING FRESH MARKET VEGETABLE STATES IN 1960

Rank	Acreage		Production		Value	
	State	Percent of total	State	Percent of total	State	Percent of total
1	California	23.3	California	32.1	California	38.2
2	Texas	14.6	Florida	13.1	Florida	16.4
3	Florida	13.8	Texas	9.7	Arizona	7.4
4	New York	4.7	New York	6.5	Texas	6.6
5	Arizona	4.4	Arizona	6.2	New York	4.5

The estimates in this publication relate primarily to fresh market production. While the estimates for many of the vegetable crops include only fresh market production, those for a few crops, such as broccoli, cauliflower and carrots, include substantial quantities processed. For asparagus and strawberries, which are perennial crops providing production for both fresh-market and processing outlets from the same acreage, a utilization breakdown is given in addition to total production. "Acreage for harvest" in this summary embraces total acreage available for harvest, including mature acreage abandoned or only partially harvested because of low prices or other economic factors. "Value" is for the marketing season or crop year and does not correspond to calendar year income. Group and All States averages are simple averages of annual data.

This summary, issued by the Crop Reporting Board, provides fresh market estimates of acreage, production, and value for the 27 principal vegetables and melons grown commercially in the more important producing States. These estimates provide basic statistics on over 80 percent of the national output of all vegetables and melons grown for fresh market sale. Fiscal limitations prevent including all vegetables in all States in this program. Estimates of mint for oil and strawberries are also in this report. These data are based upon information secured by State Agricultural Statisticians from growers, shippers, processors, public agencies, and other sources.

For the first time this report carries statistics on 6 major crops grown in Hawaii. On page 57 is a table containing information on snap beans, cabbage, cucumbers, lettuce, tomatoes, and watermelons.
