VEGETABLES - FRESH MARKET

ANNUAL SUMMARY

1962

Production of the 27 principal fresh market vegetables and melons in 1962 was slightly less than last year, but 4 percent above average, the Crop Reporting Board announced today. The production of 213.4 million hundredweight compares with 214.3 million hundredweight last year and an annual average production of 206.0 million hundredweight. Major vegetables and melons contributing to the decline from last year were lettuce, tomatoes, cabbage, and celery. Increases were registered in the production of watermelons, onions, carrots, sweet corn, and cantaloups. Record tonnages of sweet corn and cantaloups were produced in 1962. Total production of the 24 vegetables for fresh market at 169.7 million hundredweight was 1 percent below last year, but 4 percent above average. Value of the principal vegetable and melon crops totaled 867 million dollars, 2 percent above last year and 10 percent above average. Tomatoes and lettuce--the two crops with values over 100 million dollars--account for 35 percent of the total compared with 33 percent last year.

Strawberry production, at 515.5 million pounds, was 1 percent above last year and 10 percent above average. Of the total 1962 production, 56 percent was used for fresh market and 44 percent went to processors. This is about the same percentage utilization as last year.

California continues to be the leading producer of fresh vegetables and melons. In 1962, California had nearly a fourth of the acreage, and about a third of the production. Florida continues to rank second in acreage, production and value of crops produced. The five leading States--California, Florida, Texas, Arizona, and New York--all rank the same as last year and account for 61 percent of the Nation's harvested acreage; 67 percent of the total production; and 74 percent of the value of vegetables and melons produced.

LEADING FRESH MARKET VEGETABLE STATES IN 1962

Rank	Harvested Acreage		Production		Value	
	State	Percent of total	State	Percent of total	State	Percent of total
1	California	23.2	California	31.8	California	35.9
2	Florida	14.8	Florida	14.4	Florida	19.2
3	Texas	13.8	Texas	8.9	Arizona	8.1
4	Arizona	4.8	Arizona	6.5	Texas	7.0
5	New York	4.5	New York	5.8	New York	4.1

Estimates in this publication relate primarily to fresh market production. While estimates for many vegetable crops include only fresh market production, those for a few crops, such as broccoli, cauliflower, and carrots, include substantial quantities processed. For asparagus and strawberries, which are perennial crops providing production for both fresh market and processing outlets from the same acreage, a utilization breakdown is given in addition to total production. "Acreage for harvest" in this summary embraces total acreage available for harvest, including mature acreage abandoned or only partially harvested because of low prices or other economic factors. Planted acreage in this report includes in addition to acreage for harvest, acreage lost or abandoned due to natural causes and acreage abandoned prior to reaching maturity because of economic conditions. Acreage lost and replanted to the same crop early enough to be harvested in the season for which it was originally intended, is counted only once. Acreage lost and replanted to the same crop for harvest in a later season, is considered to have been planted in both seasonal classifications but is included as acreage for harvest in the second season only. Acreage lost and replanted to another vegetable crop is included as planted

eage in estimates for both crops but as acreage for harvest for the second crop only. Both nted and for harvest acreage published for asparagus and strawberries includes only bearing eage and excludes non-bearing acreage planted for harvest in a future marketing season. lue" is for the marketing season or crop year and does not correspond to calendar year income. up and all states averages are simple averages of annual data.

This summary provides fresh market estimates for the 27 principal vegetables and melons wn commercially in the more important producing States. These estimates provide basic statis- s on over 80 percent of the national output of all vegetables and melons grown for fresh ket sale. It has not been possible to include all vegetables in all States in this program. se data are based upon information secured by State Agricultural Statisticians from growers, ppers, processors, public agencies, and other sources. Estimates of mint for oil are also luded in this report.
