Spinach	24 - 25
Tomatoes	26 - 27

VEGETABLES - PROCESSING

ANNUAL SUMMARY

1961

Aggregate production of the 10 principal vegetable crops grown for processing in the United States totaled 8,109,300 tons in 1961 according to the year-end summary of the Crop Reporting Board. This is 11 percent more than comparable production in 1960 and 20 percent more than the 1950-59 average. Total production this year was the highest since the record output of 8,376,320 tons in 1956. Production of some crops, notably green lima beans, snap beans, sweet corn, and cucumbers for pickles, however, reached new individual crop highs this season.

Percentage increases in production this year over last were: beets, 23; sweet corn, 23; cucumbers for pickles, 20; snap beans, 16; green peas, 14; green lima beans, 13; tomatoes, 4; and asparagus, 3. A decline of 5 percent was shown in production of cabbage for sauerkraut and production of spinach for processing was nominally less this year than last.

This publication includes data on planted acreage of the principal processing vegetable crops which were formerly issued in a special supplementary report. Planted acreage as shown in the following tables consists of harvested acreage plus any acreage lost or abandoned either before or after reaching maturity. Acreage lost but replanted for harvest in the same season is counted only once. For asparagus, planted acreage does not include non-bearing acreage planted for harvest during some future marketing season. Harvested acreage is defined as that brought successfully to maturity which was either completely or partially harvested.

Value of all vegetables harvested for processing in 1961 is estimated at $334,463,000. This compares with $287,430,000 in 1960 and the average valuation of $268,384,000. Aggregate value of processing vegetables this year is the highest since 1956.

The States leading in acreage, production, and value of processing vegetables rank as follows:

Rank	Acreage		Production		Value	
	State	Percent of total	State	Percent of total	State	Percent of total
1	Wisconsin	15.4	California	32.4	California	31.8
2	California	15.2	Wisconsin	8.9	Wisconsin	7.4
3	Minnesota	9.5	Minnesota	5.7	Oregon	6.7
4	Washington	7.0	Illinois	5.4	New Jersey	6.0
5	Illinois	6.6	New York	5.4	Washington	5.8

This report is made possible through the cooperation of vegetable processors who provide basic statistics concerning their operations.

Summary of acreage and yield per acre of principal vegetables for processing, United States, average 1950-59, annual 1960 and 1961
