CROP REPORTING BOARD, AMS, USDA
WASHINGTON, D. C.

RELEASE: DECEMBER 17, 1956
3:00 P.M. (E.S.T.)

VEGETABLES - PROCESSING

1956

ANNUAL SUMMARY

This year's estimated production of the 10 principal vegetables for commercial processing exceeds by 15 percent the previous record high production obtained in 1951, according to the Crop Reporting Board. Estimated at 8.26 million tons, it exceeds the 1955 production by 34 percent and the 1945-54 average by about 39 percent. These processing crops were harvested from an acreage only about 6 percent more than the 1955 harvested acreage and slightly above average.

The tonnage of each processing crop covered by this report, except asparagus, is above the 1955 production; all exceed the 10-year average. Record-large quantities are estimated for tomatoes, sweet corn, green peas, green lima beans and beets for canning. For snap beans, pickling cucumbers and spinach, this year's production has been exceeded only once and for kraut cabbage, twice.

The 1956 value of the 10 processing crops, based on season-average prices to growers is 315 million dollars, also a record high. Last year the value was 251 million; the 10-year average is 239 million dollars. These value estimates should not be confused with estimates of cash receipts or calendar-year income.

The 1956 rank of the leading processing-vegetable States is:

Acreage - (1) Wisconsin; (2) California; (3) Minnesota; (4) Illinois and (5) Washington.

Production - (1) California; (2) Wisconsin; (3) Illinois; (4) Indiana and (5) New York.

Value - (1) California; (2) Wisconsin; (3) Oregon; (4) New Jersey and (5) Washington.

This report was prepared from basic data obtained from commercial processors, State agricultural statisticians and cooperating agencies.

PROCESSING VEGETABLE ESTIMATES REVISED

All of the processing vegetable estimates, including the averages, contained in this report, have been revised, where necessary, on the basis of the 1954 Census of Agriculture. Since the original estimates were based on reports from nearly all known processors, the number and magnitude of such revisions were generally small. Revised estimates for the individual years 1949-55 inclusive will be published in a separate bulletin at a later date. Estimates for years prior to 1949, which have not been revised, are available in Statistical Bulletin No. 132.

Vegetables for commercial processing: General summary of acreage, production and value of principal crops, United States, average 1945-54, annual 1955 and 1956
