Farm Labor

Release
March 10, 1965
3:00 P.M. (E.S.T.)

February Survey Week Shows Winter's Dominance

The number of persons working on the Nation's farms during the week of February 21-27, totaling 4,334,000, was 9 percent less than the previous low for a February week. Both groups of workers, farm family members and hired workers, were notably less numerous then in recent years. Farm family workers totaled 3,491,000 or 10 percent less than in February 1964. Hired workers totaled 843,000 or 5 percent under last year's low February level. Compared with February survey week averages for the 5 years 1959-63, the current totals show a decrease in all workers of 18 percent, in family workers of 17 percent, and in hired workers of 19 percent.

Weather during the survey week was mostly mild and sunny west of the Rockies but cold or wet in the East. A cold wave of driving intensity hit many central States and swept southward taking freezing weather as far south as the lower Rio Grande Valley of Texas. Cold weather and wet soils hampered field work in the Southeast and in the lower Mississippi Valley, areas where much activity at this date could be expected, given sunshine and dry fields.

Citrus harvest assumed large relative importance during this period for hired workers in both Florida and California. Worker shortages were reported, mainly for oranges and grapefruit in Florida and lemons in Southern California.

Hours Worked, Worker Numbers Show Slow Seasonal Gain

The number of all farm workers in late February, although at a record low for the month, represented an increase of about 7 percent over January - near the average change. Comparison of hours worked is also of interest in indicating seasonal change. The summary of hours worked on reporting farms on page 7, shows a national average for the farm operators reporting of 37.1 hours; other family, 29.3 hours; and hired workers 34.9 hours per week. The January survey week showed the following averages - operators, 36.8 hours, other family 28.8 hours, and hired workers 33.7 hours per week. The average for all workers on reporting farms in the February week was 35.0 hours per week, a gain of 1 percent over January.

Complete Monthly Record for 1964 Shows July Peak

This report shows on pages 4-6 a complete record of 1964 monthly estimates of farm worker numbers by States. Some revisions from estimates published currently were made in a number of State monthly estimates in a review made by State Statisticians. The changes were generally of minor importance in relation to the annual average levels of employment estimated and were compensating in effect on the U.S. total. The survey week in July showed the largest total employment, with 7,500,000 persons doing farm work, including 2,542,000 hired workers.
