VEGETABLES - FRESH MARKET

ANNUAL SUMMARY

1963

Production of the 27 principal fresh market vegetables and melons in 1963 was 2 percent more than last year and 4 percent above average, the Crop Reporting Board announced today. Production was 219.4 million hundredweight compared with 214.5 million hundredweight last year and the 5-year average production of 211.1 million hundredweight. Major vegetables and melons contributing to the increase from last year were carrots, celery, sweet corn, cucumbers, lettuce, and watermelons. Decreases were registered for snap beans, cabbage, onions, and tomatoes. Record high tonnages of cucumbers, lettuce, and cantaloups were produced in 1963. Lowest production of record was recorded for kale and green peas. Value of the principal vegetable and melon crops totaled 886.4 million dollars, 1 percent above last year and 9 percent more than average. Tomatoes and lettuce--each with values of over 150 million dollars--accounted for 35 percent of the U. S. total, the same percentage as last year.

Strawberry production, at 510.8 million pounds, was 3 percent less than last year but 1 percent above average. Of the total 1963 production, 58 percent was used for fresh market and 42 percent went to processors. Estimates of mint for oil, valued in 1963 at 2.2 million dollars, are also included in this report.

California continues to be the leading producer of fresh vegetables and melons. In 1963, California had nearly a fourth of the acreage, and about a third of the production. Florida continues to rank second in acreage, production and value of crops produced. The five leading States--California, Florida, Texas, Arizona, and New York--all retain the same rank as last year and account for 62 percent of the Nation's harvested acreage; 70 percent of the total production; and 73 percent of the value of vegetables and melons produced.

LEADING FRESH MARKET VEGETABLE STATES IN 1963

Rank	Harvested Acreage		Production		Value	
	State	Percent of total	State	Percent of total	State	Percent of total
1	California	23.4	California	32.3	California	35.7
2	Florida	15.4	Florida	15.8	Florida	17.3
3	Texas	13.9	Texas	9.7	Arizona	8.4
4	Arizona	4.9	Arizona	6.5	Texas	6.9
5	New York	4.4	New York	5.4	New York	4.4

Estimates in this publication relate primarily to fresh market production. While estimates for many vegetable crops include only fresh market production, those for a few crops, such as broccoli, cauliflower, and carrots, include substantial quantities processed. For asparagus and strawberries, which are perennial crops providing production for both fresh market and processing outlets from the same acreage, a utilization breakdown is given in addition to total production. "Acreage for harvest" in this summary embraces total acreage available for harvest, including mature acreage abandoned or only partially harvested because of low prices or other economic factors. Planted acreage in this report includes in addition to acreage for harvest, acreage lost or abandoned due to natural causes and acreage abandoned prior to reaching maturity because of economic conditions. Acreage lost and replanted to the same crop early enough to be

harvested in the season for which it was originally intended, is counted only once. Acreage lost and replanted to the same crop for harvest in a later season is considered to have been planted in both seasonal classifications but is included as acreage for harvest in the second season only. Acreage lost and replanted to another vegetable crop is included as planted acreage in estimates for both crops but as acreage harvested for the second crop only. Both planted and harvested acreage published for asparagus and strawberries includes only bearing acreage and excludes non-bearing acreage planted for harvest in a future marketing season. "Value" is for the marketing season or crop year and does not correspond to calendar year income. All 5-year averages of State and group totals are simple averages of annual data.

This summary provides fresh market estimates for the 27 principal vegetables and melons grown commercially in the more important producing States. These estimates provide basic statistics on over 80 percent of the national output of all vegetables and melons grown for fresh market sale. It has not been possible to include all vegetables in all States in this program. These data are based upon information secured by State Agricultural Statisticians from growers, shippers, processors, public agencies, and other sources.
