VEGETABLES - FRESH MARKET

1955

ANNUAL SUMMARY

Production of the 28 principal vegetables for fresh market in the major producing States reached a record 10,290,000 tons in 1955. This is only slightly higher than the previous record of 10,287,000 tons of these crops produced in 1954 but it is 6 percent more than the 1949-53 average. Compared with 1954, production in 1955 was up significantly for snap beans, broccoli, cauliflower, sweet corn, garlic, lettuce, shallots, tomatoes, and watermelons. Increased output of these commodities was nearly balanced by sharp declines in the production of beets, Brussels sprouts, cabbage, and honey dew melons and smaller crops of lima beans, cantaloups, carrots, celery, onions, and spinach.

Winter vegetable production in 1955 was 2 percent greater than in the previous year. Favorable late winter weather and market conditions caused production of many crops to exceed early season forecasts. Total production of spring vegetables in 1955 was equal to that of 1954. Losses in production resulting from freezing temperatures in the Southern States early in the spring were offset by favorable late spring weather in these and other States. For the summer season total vegetable and melon production was only slightly greater than in 1954. A sharp increase in watermelon production was largely responsible for sustaining summer production at this level. Production of beets, carrots, celery, honey dew melons onions and tomatoes was down sharply from 1954. The indicated production of fall vegetables is 4 percent less than last year.

California, the leading producing State, accounted for 30 percent of the 1955 production of the 28 principal vegetables for fresh market. Florida produced about 15 percent and Texas about 10 percent of the national total, retaining their position as second and third ranking States. New York and Arizona remained fourth and fifth in importance in fresh market vegetable production.

Strawberry production in 1955 was 9 percent above the preceding year and was close to the record large crop harvested in 1942. Unfavorable spring weather curtailed production in the Southern States and in Washington in 1955, but in most other States production was larger than in 1954. The tonnage of strawberries used by processors continued to increase and reached a new record high in 1955.

This report is compiled by the Crop Reporting Board from data supplied by State agricultural statisticians in the major vegetable producing States. The crops in this publication are those which the Crop Reporting Board includes in its regular program of monthly fresh market vegetable reports. The 28 principal vegetable crops in the major producing States account for about 81 percent of the commercial production of all fresh-market vegetables in the United States. The estimated United States commercial production of all vegetables for 1955 will be published in a separate report.

Commercial vegetables for fresh market: General summary of acreage of principal crops, United States, annual 1954 and 1955 1/

1/ Includes casabas, Persians, and other muskmelons; but not honey ball and honey dew melons.
2/ Acreage available for harvest, including mature acreage abandoned or only partially harvested because of low prices or other economic factors.
3/ Group averages (including All States) are simple averages of annual data for the group.
4/ Jumbo cantaloup crate, approximately 83 pounds.
5/ All Texas cantaloup production included in mid-summer group prior to 1953.
6/ Includes some quantities not marketed and excluded in computing value: Spring, Florida, 9,000 crates in 1955; Early Summer, Georgia, 20,000 crates in 1954 and 10,000 in 1955; Mid-Summer, North Carolina, 77,000 crates in 1955.

CARROTS, Commercial crop for fresh market: Acreage, ield ,production, season average price received by growers, nd value, average 1949-53, annual 1954 and 1955 1/

1/ Mostly for fresh market but includes production used for processing and for dehydration.
2/ Acreage available for harvest including mature acreage abandoned or only partially harvested because of low prices or other economic factors.
3/ Group averages (including All States) are simple averages of annual data for the group.
4/ Value is for the marketing season or crop year and does not correspond to calendar year income.
5/ Approximately 60 pounds.
6/ Includes some quantities not marketed and excluded in computing value: Winter, Florida 71,000 crates in 1954; Spring, Florida 456,000 crates in 1954 and 110,000 crates in 1955; Early Summer, New York 40,000 crates in 1954.

SWEET CORN, Commercial crop for fresh market: Acreage, yield, production, season average price received by growers, and value, average 1949-53, annual 1954 and 1955. 1/

1/ Acreage available for harvest, including mature acreage abandoned or only partially harvested because of low prices or other economic factors.

2/ Group averages are simple averages of annual data for the group.

3/ Approximate net weight of units: Artichokes - Box of 40 pounds, Escarole - Bushel of 25 pounds, Honey Balls - Crate of 70 pounds, Kale - Bushel of 18 pounds, Shallots - Barrel of 100 pounds (240 bunches).

4/ Value is for the marketing season or crop year and does not correspond to calendar year income.

5/ Includes production for fresh market and processing.

6/ Includes some quantities not marketed and excluded in computing value: Escarole, Florida, 417,000 bushels in 1954 and 83,000 bushels in 1955; Kale, Virginia, 50,000 bushels in 1954; Shallots, Louisiana, Winter, 19,000 barrels in 1955; Spring, 12,000 barrels in 1955.

POTATOES: Early Commercial crop: Acreage, yield, production, season average price received by growers, and value, average 1944-53, annual 1954 and 1955.
