ReadMe Memo for Data and Analysis used for "Self-Coding: A Method to Assess Semantic Validity and Bias when Coding Open-Ended Responses"

The findings appearing in the manuscript rely on the following files:

- Stata .do file (using Stata version 16.1): self_coding.do
    - Which imports this Excel .xlsx file: Self Coding Survey Data, for Stata.xlsx
    - And then produces this .log file: self_coding.log

The .do file is annotated with notes about which sections of syntax are used for which tasks. The t-test result reported in the manuscript is on line 90. The results reported in Figure 1 begin on line 680. The results reported in Table 1 begin on line 706.
