Replication for Mummolo and Nall 2016
April 19, 2016

Instructions:

1. Open the R script file “Estimation_batch.R”. This script executed successfully using R version 3.2.4 through RStudio version 0.98.507.

2. Load all packages listed at the top of the script. All packages used in our analysis were last updated on April 19, 2016.

3. Set your working directory as the object “wd” and a file path for where you would like tables and figures to be stored as the object “output,” as directed in the script.

4. Execute the rest of the code to reproduce all tables and figures in the manuscript and online appendix.
