Replication File

The replication file includes instructions for formulating the final database using Stata. The quarterly files are prepped and appended together with the creation of the longitudinally formatted variables. The file named "1033_DataReplication_DoFile" can be run in Stata or the instructions and steps could be transposed by a user to another data application.

Final Database

The final database can be used for 1033 Program inquiries and analyses. The database is prepped and includes all relevant variables. The folder marked "1033_Current_Database_2023-2" contains a file named "1033_AgencyQTRData_2014-4_2023-2" – This file can be opened for use as a .csv file (Excel) or a .dta file (Stata). Future versions will be updated (with past version archived) upon each 1033 quarterly release. The structured file folders with access to the final database are only accessible via Dropbox (Harvard Dataverse does not allow separate folders).

Metadata

The below table serves as a Masterfile for variable naming conventions used in the updated database.
