The do file (SovietCollaboratio.do) is a Stata 13 file that creates the tables and figures in the paper based on three data sets: SovietCollaboration_MainDataset.dta, SovietCollaboration_CitationToSovietArtDataset.dta, SovietCollaboration_SpecializationDataset.dta. The data sets are Stata 13 data sets.

The first data set, SovietCollaboration_MainDataset, is called by the do file for results on increase in team size, both OLS and Poisson estimations, graph on increases in team size, increases in team size alternative ranking, increases in team size robustness to including Soviet papers, increases in team size for Japan, graph on increases in team size in Japan, and increases in team size other countries. (Fig 1-6, Tables 1-4, Tables A1-A7)

The second dataset, SovietCollaboration_CitationToSovietArtDataset.dta, is called for results on citations to prior Soviet art. (Table 5)

The third dataset, SovietCollaboration_SpecializationDataset.dta, is called for results on specialization and graph of specialization over time. (Fig 7, Table 6, Table A8-A9)
