READ ME Run data stored here

There two zipped packages herein, each containing 11 files, one for each of the 11 runs. The first zipped group are Excel tabulations of data related to strain and strain rate, the second are pdf scans of lab book pages.

Excel files: Data tabulated in real time during each run giving time, date, identification (= indexing) of associated radiograph and diffraction spectrum of each reading, pixel measurements from the associated radiograph, and calculations based on time and pixel values of strain and strain rate.

pdf files: Handwritten notes taken in real time associating the indexing in the Excel files with the progress and events of each run step.
