================================================================================
Project Code: BYUC0024
Project Name: American Family Values
Prepared for: Jeremy Pope and Chris Karpowitz
Interviews: 3000
Field Period: July 03, 2020 - July 14, 2020
Project Manager: Marissa Shih - 650 319 0707
================================================================================
YouGov interviewed 3251 respondents who were then matched down to a
sample of 3000 to produce the final dataset. The respondents were
matched to a sampling frame on gender, age, race, and education. The
frame was constructed by stratified sampling from the full 2017 American
Community Survey (ACS) 1-year sample with selection within strata by weighted
sampling with replacements (using the person weights on the public use
file).

The matched cases were weighted to the sampling frame using propensity
scores. The matched cases and the frame were combined and a logistic
regression was estimated for inclusion in the frame. The propensity
score function included age, gender, race/ethnicity, years of education,
and region. The propensity scores were grouped into deciles of the
estimated propensity score in the frame and post-stratified according to
these deciles.

The weights were then post-stratified on 2016 Presidential vote choice, and
a four-way stratification of gender, age (4-categories), race (4-
categories), and education (4-categories), to produce the final weight.
