January, 2018

This file describes the data and code for "Price Regulation and Environmental Externalities: Evidence from Methane Leaks" by Catherine Hausman and Lucija Muehlenbachs, in the *Journal of the Association of Environmental and Resource Economists*.

A. DESCRIPTION:

The original data cannot be posted, as is it is from SNL.com, a provider of proprietary energy data. We provide instructions for obtaining the data. We also provide the Stata code (in .do format) used for estimation.

Please contact us with questions:

Catherine Hausman
Ford School of Public Policy
University of Michigan
chausman@umich.edu

Lucija Muehlenbachs
Department of Economics
University of Calgary
lmuehlen@ucalgary.ca

B. INSTRUCTIONS FOR OBTAINING DATA:

We obtained a subscription to the Energy module of SNL.com. SNL assembles information on regulated utilities from the Department of Energy's EIA, from the Department of Transportation's PHMSA, and from state-level public utilities commission filings. We use the following categories of fields: "Gas LDC Operating Detail," "Gas Source/Use and Retail Sales," and "Gas Infrastructure." We also use the "Rate Case" product within the Energy module.

We supplement with:

- Data from PHMSA on pipeline incidents, available at https://www.phmsa.dot.gov/data-and-statistics/pipeline/distribution-transmission-gathering-lng-and-liquid-accident-and-incident-data
- Data from the EIA on state-level citygate prices, available at https://www.eia.gov/dnav/ng/ng_pri_sum_a_EPG0_PG1_DMcf_a.htm
- Data from FRED on the CPI, available at http://research.stlouisfed.org/fred2/series/CPILEGNS

C. CODE FOR ESTIMATION:

HM_estimation.do creates figures and tables for the main text and the Online Appendix.
