Replication Readme

Requirements from JEPS

(1) Files necessary to replicate your experiment, including (where relevant for your studies):
- full text of any survey instruments or experimental instructions (both in English and in the original language, where this is not English)

A: The codebooks are in the replication folder. For Great Britain, the codebook is titled: GB_Scotto_W3_cleaned_(XPS-D-15-00053R1)**.txt. For the United States, the codebook is titled US_W3_Scotto_CLEANED_**(XPS-D-15-00053R1)**.txt.**

(2) Files necessary to replicate your data analysis, including:
- the raw data from your experiment (what this means exactly will vary from study to study; we obviously don't mean hand-scanned copies of individual responses to pencil-and-paper-administered surveys or many terabytes of fMRI data)
- the final dataset(s), derived from the raw data, on which your results are based, plus a description of how previous intermediate data sets and programs were used to create the final data set(s)
- programs used to run the final models (e.g., a stata .do file that should run easily and transparently when your data files are located in an appropriate working directory)

A: The datafiles, as produced by YouGov (our contracted survey company) are Stata v.13 files w3_uk_(XPS-D-15-00053R1**.dta is the UK file and w3_us.dta_(**(XPS-D-15-00053R1) **is for the US. The "foreign" package in R can read these files.**

B: The R command line file is: finalreplicationfile_(XPS-D-15-00053R1**.R and runs in R Studio. The following directory files need to be adapted for local use:**

i) uk_w3<-read.dta("C:/Users/pkb16122/Dropbox/w3_uk.dta", convert.underscore=TRUE)

ii) us_w3<-read.dta("C:/Users/pkb16122/Dropbox/w3_us.dta", convert.underscore=TRUE)
