R&P AI Paper Replication Material Note

Our replication materials consist of the (Stata Vers 16 format) dataset, 'AIpaper_Data_R&Pclean.dta', the Stata do-file 'AIpaper_Analysis_R&P.do', and the Stata log file, 'AIpaperreplication_log'.

To recreate all of the output that features in our article and the associated supplementary materials appendix, simply open the dataset AIpaper_Data_R&Pclean.dta (which consists of a 'cleaned' version of our dataset, with all the necessary variables coded and labelled) and then run the do-file, 'AIpaper_Analysis_R&P.do'. All of the raw data used in our tables and figures will then be reproduced for inspection. This can all be confirmed by observing the output in 'AIpaperreplication_log'. The do file begins with the Tables and Figures in the main text of our article, before moving on to the supplementary appendix material afterwards. The do-file contains sufficient labelling to make it clear which precise table/figure/model is being replicated in any given line of code.

Best wishes,
The authors.
