General Comments on Replication Files

The following are replication files for the article, "Alliances, Institutional Design, and the Determinants of Military Strategy," appearing in the forthcoming vol.25 no.2 issue of *Conflict Management and Peace Science*.

codebook.pdf
- Codebook containing descriptions of all variables in the data set.

alliance.dta
- Data set used for the paper in Stata format.

alliances_analysis_cmps_review_usrus0.do
- Stata do-file for commands and procedures used in main tables and robustness checks for results reported in the paper.

alliances_analysis_cmps_review_usrus1.do
- Supplementary Stata do-file involving a different coding for U.S. and Russian observations (coded as 1/alliance rather than 0/no alliance primarily used in the paper for relevant alliance variables). As was noted in the paper, results do not change substantially when using this alternative coding scheme.

supplementary_tables_pdf
- Supplementary tables reporting results from several robustness checks and different specifications of the main models reported in Tables 3 and 4.
