Where'd you get all this stuff?
At the syringe service program across town. My doctor told me about that, too.
My doc also tested me for Hep C -- thankfully I was negative.
I didn't know that Hep C could spread so easily between people who are sharing supplies. We gotta protect each other.
Huh. Mine just tells me to quit.
She offered to help with that, too, if I wanted. But for now she gave me naloxone, the stuff that brings you back if you go out
NARCAN® (naloxone HCl) NASAL SPRAY 4 mg
Use for known or suspected opioid overdose in adults and children.
Two Pack
NARCAN NASAL SPRAY 4 mg
Why don't you go first so I can make sure you're good, then you can watch out for me. If things go wrong you just spray it up my nose.
Cool. Thanks man.
