Concord, NH – The NH Department of Health and Human Services (DHHS) has launched a new COVID-19 Dashboard to help residents and stakeholders track the impact of the coronavirus on our communities. The DHHS COVID-19 Dashboard will be updated daily to display data on COVID-19 cases, related hospitalizations and deaths, and additional demographic detail and county of residence.

“The COVID-19 Dashboard is a great opportunity to provide our residents with data about the COVID-19 emergency in New Hampshire,” said DHHS Commissioner Lori Shibinette. “It is easy to access and navigate, and the presentation of the data provides our residents with meaningful information about the spread of the virus in their communities. My gratitude to the public health and information services staff who created the Dashboard.”

The goal of the COVID-19 Dashboard project is to make COVID-19 data as easy to access as possible. Residents in all counties have had to make significant sacrifices due to the presence of the coronavirus. DHHS built the Dashboard to ensure our residents can quickly find out the most current information about the impact of COVID-19 in our communities and throughout New Hampshire.

The COVID-19 Dashboard will replace the COVID-19 Weekly Summary Report, so residents will have access to the weekly report’s data on a daily basis instead of weekly. The data can be viewed on all types of devices, including computer, tablet and smart phone.
