Replication Archive – Explanatory Memo

Punishing Personal and Electoral Corruption: Experimental Evidence from India

The replication archive for the article "Punishing Personal and Electoral Corruption: Experimental Evidence from India" consists of the following files:

1. **survey_experiment_data.dta:** Contains all relevant variables for the analysis of the survey experiment, in Stata format.

2. **Survey_Experiment_Replication_1.R:** This file contains all necessary code to replicate all analyses done in **R**. It produces the output of Table 1 and Figure 1 in the main manuscript; and of Tables 1, 2, 9, 10, 11, 12, 13 as well as Figure 2 in the Online Appendix. It also contains the code that pre-processes the data using matching and saves them in separate dta files.

3. **Survey_Experiment_Replication_2.do:** This file contains all necessary code to replicate all analyses done in **Stata**. It produces the output of Tables2 and 3 in the main manuscript; and of Tables 3, 4, 5, 6, 7, 8, 14, 15, and 16 in the Online Appendix.

4. **mdata_1.dta:** Dataset with observations used after pre-processing the data through matching, "Resign" question, in Stata format.

5. **mdata_2.dta:** Dataset with observations used after pre-processing the data through matching, "Ban" question, in Stata format.

6. **mdata_3.dta:** Dataset with observations used after pre-processing the data through matching, "Jail" question, in Stata format.

7. **Survey_Experiment_log_1.pdf:** Log file with R console output for Survey_Experiment_Replication_1.R

8. **Survey_Experiment_log_2.smcl:** Log file with Stata console output for Survey_Experiment_Replication_2.do
