In the following pages, you will be presented with descriptions of different reporting practices that people may engage in when they complete studies at the Booth Chicago Research Lab. For each practice, we will ask you how frequently you have engaged in this practice.

In the following pages, you will be presented with descriptions of different reporting practices that people may engage in when they complete studies at the Booth Chicago Research Lab. For each practice, we will ask you to estimate how frequently the average Booth research participant engages in this practice.

How many hours a week do you spend completing studies at the Booth Chicago Research Lab? (Please enter your response as a number (e.g. 2 not "two"; 2.5 not "two and a half").

Comment [EAN1]: Some subjects have asked what they should put if they tend to participate in 2 or 3 hours of study one week a quarter. I don't know if this will be a problem with CRL participants, but if it is and someone asks, I have told them to compute the average (this would round down to approximately 0 hours per week).

Condition 2:

When completing behavioral sciences (e.g. psychology, economics, etc.) studies at the Booth Chicago Research Lab, what percentage of time spent completing studies does the average Booth research participant engage in each of the following practices?

Comment [EAN2]: Some participants have been confused as to whom I am asking this question about. I have reminded them to consider the other people they see completing studies at the CRL – think about how often they think those people engage in these behaviors.
