Data Tools

ıd Comments Module

ts from a video id and retrieves basic info for the video in question and provides a number of analyses of the comment section. Comments are retrieved via the ls/list API endpoint.

ɔmments the script is able to retrieve can vary wildly. In some cases, only a relatively small percentage is made available, while in others well over 100.000 comm eved. This seems to be mainly related to the age of the video in question.

tes the following outputs:

ile containing basic info and statistics about the video;
ile containing all retrievable comments, both top level and replies;
ile containing comment authors and their comment count;
file (gdf format) that maps interactions between users in the comment section;

ements can be shown directly in the browser by enabling HTML output.

n and comment cutoff:

rZHnq0Td0qI&list=RDrZHnq((video ids can be found in URLs, e.g. https://www.youtube.com/watch?v=aXnaHh40xnM)

top level comments (ranked by relevance, leave empty for no limit)

:

(displays HTML result tables in addition to file exports)

(replaces usernames and comment ids with irreversible hashes)
