Description of Code and Data Files

The code and data files provided (.do, .ado, and .dta) are designed for use with Stata 18. The do-files contain the code necessary to reproduce the figures and tables, presented in the same order as they appear in the paper.

Master Do-Files

The project includes three do-files:

- *main.do*;
- *appendix_a.do*;
- *appendix_c.do*.

To run the code, adjust the path specified in the *global USER* line to match the local directory.

Ado-Files

Three custom ado-files have been written by the authors to:

1. Run regressions on the border sample;
2. Estimate standard errors using Conley (1999)'s methodology.

The ado-files included are:

- *twowaycluster_1.ado*;
- *twowaycluster_2.ado*;
- *ols_spatial_HAC.ado*.
