## Instructions to Replicate Results

The replication package provided consists of five files, "`spar_replication_1.dta`", "`spar_replication_2.dta`", "`spar_replication_3.dta`", "`spar_replication_4.dta`", and "`sprar_replication.do`". All files were created in Stata MP, version 16.1. To replicate all results, please follow the steps listed below:

1) Create a folder on your machine containing both files
2) Open "`sprar_replication.do`"
3) Change the path on line 28 of "`sprar_replication.do`" to the one of the folder created at (1)
4) Run "`sprar_replication.do`". This will open all the different data sets, as needed, and replicate all tables (in *.tex* format) and figures (in *.jpg* format). Tables and figures will be automatically saved into the folder created at (1).
