Folder: 1. External Data

This folder contains:

- ECD-Data.dta: This Stata data file contains the external data provided by our field partner.

Note:

ECD-Data.dta data file contains a few socio-demographic variables. Those are -

Variable Name	Label	Variable Name	Label
CHILD_ID	Child Identification number	child_age	Children's age in years as of 1/1/2021
sc2_17_F3	Father's Age	sc2_17_M3	Mother's Age
sc2_17_F5	Father's Education	sc2_17_M5	Mother's Education
sc2_17_F7	Father's Monthly Income	sc2_17_M7	Mother's Monthly Income
sc2_17_Q3_15_1	Homestead land (Decimal)		

In addition to a few socio-economic variables collected from the socio-economic survey (described above), this data file contains test score data: end_literacy_score and end_numeracy_score variables. These two variables were collected in 2019-2020 and served as the endline literacy and numeracy variables for the external project. As we started our study during the Covid-19 pandemic, it was not possible for us to conduct in-person assessment at our baseline. Thus, we use these two variables as our baseline literacy and numeracy scores to check whether our sample is balanced across the treatment arms as well as for estimating heterogeneous treatment effects.

To-Do:

No action needed.
