Readme

Folder: 1. Data Preparation.

This folder contains:

1. Sample identification data file.
2. Four folders containing different datasets.
3. Stata do file to merge all data to produce IVR_Data needed for data analysis.

To-Do:

4. Download and Extract Files: download all folders and files as a ZIP file. Extract and save them in the same folder.
5. Open the folders Rapid Baseline Survey, Lesson Data, and Endline Survey, one by one. In each folder, execute the corresponding .do file. Note: The *External Data* folder does not contain a .do file.
6. After executing these three do files, return to the main folder (Data Preparation) and execute the *Data-Clean-Merge.do* file.
7. Data-Clean-Merge.do will generate and replace a dataset named *IVR_Data.dta* (located in …Detailed Replication\2. Data Analysis\Data).
8. For the remaining steps, follow the instructions provided in the README file in the 2. Data Analysis folder.
