Project Code: TUFT0009
Project Name: Antisemitic Attitudes
Prepared for: Eitan D. Hersh
Interviews: 3500
Field Period:  November 09, 2020 - November 25, 2020
Project Manager: Sam Luks - 650.462.8009
================================================================================
YouGov interviewed 3606 respondents who were then matched down to a
sample of 1000 general poputlation and 2500 oversample of young
adults (18 to 30) to produce the final dataset. The respondents were
matched to a sampling frame on gender, age, race, and education. The
frame was constructed by stratified sampling from the full 2018 American
Community Survey (ACS) 1-year sample with selection within strata by weighted
sampling with replacements (using the person weights on the public use
file).

The matched cases were weighted to the sampling frame using propensity
scores. The matched cases and the frame were combined and a logistic
regression was estimated for inclusion in the frame. The propensity
score function included age, gender, race/ethnicity, years of education,
and region. The propensity scores were grouped into deciles of the
estimated propensity score in the frame and post-stratified according to
these deciles.

The weights were then post-stratified on 2016 Presidential vote choice, and
a four-way stratification of gender, age (4-categories), race (4-
categories), and education (4-categories), to produce the 3 final weights.
For the overall weight, the oversample of young adults were weighted down to
the expected proportion within the US population.
