conjoin_ intro In the United States, the quality of government depends on the individuals who run for elected office. The purpose of the next section is to better understand what factors influence how individuals like yourself decide whether or not to run for office. We will describe a series of different pairs of general election scenarios. After each pair of scenarios, we will ask you a couple of short questions. These scenarios are hypothetical and are not meant to reflect a particular state.

Q1114 First, consider two election scenarios for a seat in a ${e://Field/conjoint_leg} with the following characteristics: Election 1 Election 2 ${e://Field/F-1-1} ${e://Field/F-1-1-1} ${e://Field/F-1-2-1} ${e://Field/F-1-2} ${e://Field/F-1-1-2} ${e://Field/F-1-2-2} ${e://Field/F-1-3} ${e://Field/F-1-1-3} ${e://Field/F-1-2-3} ${e://Field/F-1-4} ${e://Field/F-1-1-4} ${e://Field/F-1-2-4} ${e://Field/F-1-5} ${e://Field/F-1-1-5} ${e://Field/F-1-2-5}

time_preference Suppose you are allocating public revenues toward an initiative in your jurisdiction. Your task is to choose between five projects that have been proposed for this initiative. Each project would have a one-time cost of $10 million to be paid this year and would deliver a one-time benefit in a single year in the future. The projects vary in terms of the timing and the value of this benefit: shorter-term projects would deliver a smaller benefit, while longer-term projects would deliver a larger benefit: Project A Project B Project C Project D Project E Benefit $12 million in 1 year $18 million in 3 years $25 million in 5 years $50 million in 10 years $100 million in 20 years Note: All values are adjusted for inflation.
