Notes on running WRice and WNOMINATE Statistics R. Knight

WRice Statistic

This statistic was generating with Stata using John Carey's "do" file and the master "allvars" datasets. The do file is available on Dr. Carey's website.

Carey, John M. [2006] Carey data archive. http://sites.dartmouth.edu/jcarey/

WNOMINATE Statistic

This statistic was generated using the WNOMINATE Package for R. Note that voting records need to be recoded in the master "allvars" datasets before running the R package. Information on the Package is available at

Poole, Keith, Jeffrey Lewis, James Lo, and Royce Carroll. [2018]. Multidimensional Vote Scaling Software. https://cran.r-project.org/web/packages/wnominate/wnominate.pdf

Note that the master "allvars" datasets need to be recoded and otherwise modified to run the WNOMINATE statistic.
