We need to protect the human genome from patents being awarded. A patent is issued to protect the legal rights of individuals to protect their inventions. Genetic anomalies associated with disease processes are not invented, they are detected. As individuals we represent a specific moment in time along the evolutionary continuum and that time stamp represents the interaction of nature/environmental factors converging to generate our molecular fingerprint. Acting as carriers, we, invariably, pass this genetic code to our ancestors. As antiquities are designated national treasures, so should the human genome. Collectively, it belongs to all individuals and not single groups or persons.
