Dataset Codebook for:
The Influence Gap: Unequal policy responsiveness to men and women

Main dataset for Norway

Ruben Berge Mathisen (University of Bergen)
August 2023

Variable name	Variable description
ISSUE	Case identifier
QUESTION	Question text from the original survey (in Norwegian)
YEAR	The calendar year in which the survey item was fielded
ORG_DATASET_NAME	Name of the original survey that the survey item was part of
ORG_VARNAME	Name of the original variable for the survey item
SWITCHER	A dummy variable that takes the value 1 if the survey item answer scale must be reversed, else 0
POLICY	Short description of the policy proposal asked about in the survey item (in English)
TOPIC	General thematic categorization of the policy proposal. ep = Economic Policy; vi = Moral/Value Policy; fp = Foreign/Security Policy; ot = Other.
OUTCOME	Policy outcome. Coded 1 if the policy proposal was adopted within a 4-year window (to the date) after the question was fielded; coded 0.5 if the policy was "half-adopted" (see Appendix); else 0.
PREDALL_SW	Overall share of respondents who supported the policy proposal
PRED90_SW	The imputed share of respondents at the 90^{th} income percentile who supported the policy proposal

PRED50_SW	The imputed share of respondents at the 50th income percentile who supported the policy proposal
PRED10_SW	The imputed share of respondents at the 10th income percentile who supported the policy proposal
…_FAV	Number of respondents in the indicated category of the indicated variable of the original survey who supported the policy proposal. Missing values reflect the fact that surveys differ in how many categories they use for the income variable. HINC = Household Income.
…_OPP	Number of respondents in the indicated category of the indicated variable of the original survey who opposed the policy proposal. Missing values reflect the fact that surveys differ in how many categories they use for the income variable. HINC = Household Income.
…_DK	Number of respondents in the indicated category of the indicated variable of the original survey who answered "don't know" (or equivalents) when asked about the policy proposal. Missing values reflect the fact that surveys differ in how many categories they use for the income variable, and the fact that many surveys do not have a "don't know" option. HINC = Household Income.
pred_i90_men; pred_i50_men; pred_i10_men; pred_i90_women; pred_i50_women; pred_i10_women	The imputed share of respondents at income percentile *i* and among men and women respectively who supported the policy proposals. Calculated without interacting gender and income.
pred_i90_men_int; pred_i50_men_int; pred_i10_men_int; pred_i90_women_int; pred_i50_women_int; pred_i10_women_int	The imputed share of respondents at income percentile *i* and among men and women respectively who supported the policy proposals. Calculated while interacting gender and income.
