Reader replication material for

Falcke, S and Vink, M. (2020). Closing a Backdoor to Dual Citizenship: The German Citizenship Law Reform of 2000 and the Abolishment of the "Domestic Clause". *Frontiers in Sociology*, 5:536940. doi: 10.3389/fsoc.2020.536940

Our original dataset is based on the Socio-Economic Panel (SOEP), v33.1 which consists of data from 1984 to 2016 (https://www.diw.de/en/diw_01.c.571790.en/soep_v33.html). For the purpose of this analysis we focus on observations for first generation immigrants from 1993 to 2006. We have also merged the individual-level information with country of origin information from other data sets. In the following we provide information on how to use the files in this dataverse to replicate the analysis.

Creation of the data set

How we have created the data set for this analysis is described in **FalckeVink2020_DataSet.do**. In this do-file you see that we have merged the v33.1 SOEP data with three different data set including partner information from the SOEP data set as well as country of origin information:

- Partner citizenship status: We use the SOEP data to identify the citizenship status of the partner. The resulting dataset can be created using **FalckeVink2020_PartnerCitizenship**.
- Reacquisition data set (**Reacquisition.dta**): We have created a new dataset – the Reacquisition of Citizenship Dataset – and provide in this dataverse the data in csv and Stata format as well as a corresponding codebook.
- ISO country codes (**CountryCode.dta**): This data set matched corresponding iso country codes with the countries of origin in the SOEP data set to be able to match information on reacquisition and dual citizenship policies in the country of origin.

Analysis

The analysis is described in **FalckeVink2020_Analysis** in order of the corresponding Figures and Tables in the article. Before starting the analysis, the sample is restricted by calling **FalckeVink2020_SampleRestriction**.
