Sampling and Weighting Methodology for the U.S. Survey of Environmental Attitudes

For the survey, YouGov interviewed 2,696 U.S. citizens between June 8 and June 20, 2012, who were then matched down to a sample of 2,500 to produce the final dataset. The respondents were matched on gender, age, race, education, party identification, ideology and political interest. YouGov then weighted the matched set of survey respondents to known marginals for U.S. citizens using the 2007 American Community Survey, the 2008 Current Population survey and the 2007 Pew Religious Landscape Survey.

Sampling Frame and Target Sample

YouGov constructed a national sampling frame from the 2007 American Community Survey, including data on age, race, gender, education, marital status, number of children under 18, family income, employment status, citizenship, state, and metropolitan area. The frame was constructed by stratified sampling from the full 2007 ACS sample with selection within strata by weighted sampling with replacement (using the person weights on the public use file). Data on voter registration status and turnout were matched to this frame using the November 2008 Current Population Survey. Data on interest in politics and party identification were then matched to this frame from the 2007 Pew Religious Landscape survey, using the following variables for the match: age, race, gender, education, marital status, number of children under 18, family income, employment status, citizenship, state. The frame was subset on U.S. citizens. The target sample of 2,500 U.S. citizens was selected with stratification by gender, age, race, and education with simple random sampling within strata. A proximity matching method was employed in which a distance function measured how close a member of the panel was to a member of the target sample for each of the following variables: gender, age, race, education, party identification, ideology, and political interest. Survey respondents were selected based on the proximity of the overall distance as measured by the weighted sum of the individual distance functions on each attribute.

Weighting

Because matching is approximate, rather than exact, and response rates vary by group, the sample of completed interviews normally shows small amounts of imbalance that can be corrected by weighting. The sample was raked to marginals for gender, education, race, and age and weights were applied. Those marginals are shown below. The weights range from 0.56 to 1.9, with a mean of one and a standard deviation of 0.29.

Age:	18-34:	29.46%
	34-54:	38.44%
	55+:	32.10%

Gender:	Male:	48.23%
	Female:	51.77%
Race:	White/Other:	79.54%
	Black:	11.82%
	Hispanic:	8.65%
Education:	HS or less:	44.98%
	Some College:	29.99%
	College Graduate:	16.29%
	Post-Graduate:	8.75%

Variable List

==========

Name	Description
caseid	Case ID
weight	Case Weight
q1_1	U.S. Citizen
q2_1	Altruism - Donation of $100 Amazon voucher
q2_1a	Altruism - Charity of choice
q2_1b_rule	Altruism - Amount to donate
q2_amount1	Reciprocity experiment - Own contribution amount
q2_amount2	Reciprocity experiment - Amount other winner receives
q2_amount1b	Reciprocity experiment – Amount received
q2_amount3	Reciprocity experiment - Other winner's contribution amount
q2_amount4	Reciprocity experiment - Amount received from other winner
q2_amount3b	Reciprocity experiment – Amount other winner receives
q2_2a_rule	Reciprocity - Expected contribution from other winner
q2_2b_rule	Reciprocity - Contribution to other winner
q2_2c_0_rule	Reciprocity - Contribution if other winner gives $0
q2_2c_25_rule	Reciprocity - Contribution if other winner gives $25
q2_2c_50_rule	Reciprocity - Contribution if other winner gives $50
q2_2c_75_rule	Reciprocity - Contribution if other winner gives $75
q2_2c_100_rule	Reciprocity - Contribution if other winner gives $100
q3_1	Subjective level of information about global warming
q3_2	Support for international environmental cooperation
