## Sampling and Weighting Methodology for French Survey of Environmental Attitudes

For the survey, YouGov interviewed 3,017 French citizens between August 15 and September 5, 2012, who were then matched down to a sample of 2,000 to produce the final dataset. The respondents were matched on gender, age, and education. YouGov then weighted the matched set of survey respondents to known marginals for the French general population using the 2009 French population census.

### Sampling Frame and Target Sample

YouGov constructed a national sampling frame from the 2009 French population census, made available through the French Statistical Institute (INSEE). A target sample of 2,000 French residents was constructed to match the joint distribution of age, gender, and education measured in the census. YouGov selected a respondent from its panel that was a close match across gender, education, and age. A proximity matching method was employed in which a distance function measured how close a member of the panel was to a member of the target sample for each variable used in the match. Survey respondents were selected based on the proximity of the overall distance as measured by the weighted sum of the individual distance functions on each attribute.

### Weighting

Because matching is approximate, rather than exact, and response rates vary by group, the sample of completed interviews normally shows small amounts of imbalance that can be corrected by weighting. The sample was raked to marginals for gender, education, and age and weights were applied. Those marginals are shown below. The weights range from 0.94 to 1.06, with a mean of one and a standard deviation of 0.03.

| | | |
|---|---|---|
| Age: | 18-39: | 31.56% |
| | 40-54: | 28.45% |
| | 55+: | 39.99% |

| | | |
|---|---|---|
| Gender: | Male: | 47.59% |
| | Female: | 52.41% |

| | | |
|---|---|---|
| Education: | CAP/BEP or less: | 59.79% |
| | Bac to Bac +2: | 27.52% |
| | Bac +3 or more: | 12.69% |
