README

This folder contains the replication material for “Health Improvements Impact Income Inequality” by Rainer Kotschy (2022). The folder contains the following files:

- *jeoa100385_replication_file.do*: The Stata do-file for the replication of the results
- *jeoa100385_data.dta*: The data set saved in Stata’s data format

All files have been created with Stata version 17.0. The replication material requires Stata version 14 or higher. To replicate the results, open the do-file and run the preamble to change the directory. Before running the code, it is necessary to install the user-written packages ivreg2, ranktest, ftools, estout, avar, weakivtest, coefplot, plausexog, and rivtest. which are required to produce the results in the paper; commands for installing these packages are listed in the do-file’s preamble. Once all packages have been installed, select the code for the content you want to replicate and run it. Make sure to reload the data set when replicating code from different figures or tables.
