The enclosed database contains the following columns

`Taxon_Label`
English vernacular (folk/common) term for a living being
E.g.: red squirrel

`Taxon_Name`
Associated taxon, given by scientific name
E.g.: Sciurus vulgaris

`Blacklisted`
Flag (y)es or (n)o, as indication whether I regarded the taxon label as blacklisted due to homography
E.g.: n

`Scientific_Carry`
Indicator whether the scientific term is "included" in the taxon labels for that living being, whether the "only" taxon label equals the scientific term, or "none" of the taxon labels matches the scientific term associated with it
E.g.: none

`Source`
Indicator for the source of the entry being Wikidata, Wikispecies or a computed possible variant from one of these sources
E.g.: Wikidata

`Tokens`
Number of computed tokens of the taxon label
E.g.: 2

`Rank`
Taxonomic rank
E.g.: Species

`Levels`
List (separated by semicolon) of the main parental taxonomic branches, starting with the next higher one
E.g.: Genus_Sciurus;Family_Sciuridae;Order_Rodentia;Class_Mammalia;Phylum_Chordata;Kingdom_Animalia

`Author`
Author(s) and year of the scientific naming, if rank is species
E.g.: Linnaeus [1758]
