CALL FOR PARTICIPATION IN RESEARCH

Dear Doctoral Students,

I am writing to draw your attention to an opportunity to participate in a research and publication project.

If you wish to participate, please confirm via email by November 8, 2024, to the following address: [anonymized]

Your response should simply state your acceptance of the participation and the conditions below ("I accept the participation and its associated conditions") or your refusal to participate. I will inform the participants about the next steps in a separate email.

Briefly about the research and the conditions for participation:

If you participate, you will be asked to write a theoretical academic paper of approximately one author's sheet (40,000 characters, about 10 pages) in Hungarian by January 31, 2025. This paper should be based on a provided bibliography of 31 items (including Hungarian and some English-language studies on the topic of the relationship between artificial intelligence and education). The paper should be theoretical (non-empirical, meaning no data collection is required. The goal is the interpretive analysis of existing studies and the development of a new theory).

Upon a subsequent positive peer review (indicating sufficient quality), the academic paper will be published in a special issue of a professional journal or in a collection of studies. This means it will count as a full-fledged scientific publication, with all its associated points and prestige value.

The research is unique, as it is expected that 15-20 studies with different content will be produced based on the same bibliographic foundation.

Participation is contingent upon accepting the following conditions:

1. You will prepare the study independently and will not use any software assistance for its writing (with the exception, of course, of the word processor you use. By software assistance, I mean particularly, but not exclusively, artificial intelligence-based programs such as ChatGPT).
2. Before being sent for peer review, the submitted works will be checked with software that detects the use of software assistance or plagiarism.
3. In connection with the previous two points, the submitted works will be subjected to other text analysis procedures; that is, the texts of the studies will be used anonymously and in aggregate in further scientific research.

Budapest, November 1, 2024.

Sincerely,
[anonymized]
