Replication Details for "The Pandemic and Political Behavior: Staying the Course."

With the exception of data on gender of authors, the data found in the spreadsheet "Pandemic-PB Data" were generated automatically using the "reports" function within *Editoral Manager*, the submission software that *Political Behavior* utilizes. The data concerning the gender of the authors were calculated by hand by the editorial assistants. The analyses (i.e. figures) that are found in the body of the paper are simply graphs of the data found in the spreadsheet. The results of the lagged dependent variable regressions presented in our online supplementary material were estimated in Stata. To replicate those results, use the dataset "Gender of author data.dta" and run the Stata do-file "Pandemic-PB lagged DV regressions.do."
