I. INTRODUCTION

This documentation is designed to accompany the Fall 1974 Elementary and Secondary School Civil Rights Survey computer file as prepared by Opportunity Systems, Inc. and DBS Corporation under contracts HEW-OS-74-84 and HEW-100-76-0090. It should be understood that some discrepancies exist on the file; therefore, one should become familiar with the documentation before using the file. This documentation should be used in conjunction with the file to ensure minimal difficulty in obtaining accurate district and school information.

The discrepancies that are present on the file are a result of the inconsistencies that were reported on the School System Summary Reports (Form OS/CR 101) and on the Individual School Campus Reports (Form OS/CR 102) for the Fall 1974 Elementary and Secondary School Civil Rights Survey. The file reflects the most accurate data obtainable from the respondents.

For many reasons - late submission of reports, no response to edit requests, or refusal to respond - this file has some incomplete or inaccurate items of information on some of the school and district records. All of these items have been noted on the file through use of an error code system. This system will be discussed at length in the documentation. In addition, some particular records (school and district) that possess discrepancies have been documented within the body of this report. One school district that will be discussed in detail is New York City. A district record had to be produced for New York City since a 101 form was not filed and a few hundred schools in the district failed to file 102 forms.

The technical problems associated with using the 1974 OCR file have been resolved. The discrepancies that exist presently can be identified through use of this documentation. However, the condition of the file requires that the user be both wary and knowledgeable.

In order to understand the method of selection and collection of data, one

must know the historical background to this particular method of acquiring and processing school statistics. Therefore, the following digression is presented for novice users of the survey file. The Office for Civil Rights (OCR) in the Department of Health, Education and Welfare, has conducted an annual survey of public school districts every year from 1968 through 1974. This Fall Elementary and Secondary School Civil Rights Survey has focused on those issues which have been of greatest interest and direct responsibility for OCR during those years in which it was conducted. The particular questions that have been asked and the particular districts which have been surveyed have changed over the several years of the survey to reflect the specific needs and requirements of the office. When using any one of the survey data files, it is important to realize that these surveys have been designed to support OCR in the compliance monitoring responsibility rather than providing a continuous survey coverage of the school districts in the United States. This has resulted in widely varying coverage rates, variations in coding schemes, and variations in the specific questions and methodology that has been employed. There has been no attempt, either implicit or explicit, to track systematically all of the school districts in the United States. Furthermore, there has been no attempt to track systematically a select subset of school districts in the United States over time.

The general survey methodology has remained basically the same throughout the several years of the survey and it is worth knowing this if one is to successfully use the resultant data files. The basic unit of survey has been the school district. School districts are chosen on a variety of bases, sometimes random, sometimes based on compliance involvement, etc. However, once a school district is chosen for inclusion in the specific survey then every individual school in that district is also covered. Furthermore, in some years select individual classrooms or class sections from the individual schools have been asked to respond. There are two basic survey instruments:

A. The School District Summary Report (FORM OS/CR 101)
B. Individual School Camput Report (FORM OS/CR 102)

The 101 form presents summary statistics and totals of the overall school district. In many cases, this district summary form reports the totals which are also reported on an individual school basis on the 102 form. In other cases, the questions on the district summary form represents specific district questions which are not repeated or supported by individual school presentations of data. More specific details on the 1974 survey file will be given later.

II. ORGANIZATIONAL STRUCTURE OF 1974 ELEMENTARY AND SECONDARY EDUCATION CIVIL RIGHTS SURVEY FILE

In 1974, a "small" survey of 3,000 school districts was conducted. The 1974 sample was chosen according to a special sampling methodology that was developed for OCR to permit enrichment of the survey coverage to focus upon areas of high interest while at the same time maintaining controls over the number of districts covered and statistical projection capability. (The specific sampling methodology will be discussed in the next section.)

The data file itself is stored in a special storage format that derives from an internal data storage and manipulation system which OCR utilizes. This storage format called attribute/value, is designed to provide a single storage approach for all of the survey files. From the OCR point of view, it considerably simplifies data access, data analysis and general data manipulation. OCR makes available to the users of the data files a FORTRAN subroutine which can be used to read each year's survey file without having to worry about the particulars of the file layout or record structure. Each logical record on the data base contains information collected from only one district or school.

Within a given record, each data element is identified by an index or "slot number". There exists various OCR documents, called directories, which specify the data element associated with each slot number. The attribute/value directory for the 1974 file is given in Appendix A. The overall storage methodology has required that no slot should have different meanings in different years. Thus, for example, slot position 43 contains the total number of schools covered in an individual district for all years, 1968 through 1974. Because of this approach, there are many slots which are not defined for a record in a particular year but it never happens that a slot has two different meanings depending on the year of the record. This considerably simplifies any data extraction and analysis which is performed. (Because of the special differential storage approach, this seeming squander of storage space does not, in fact, take any additional storage space.)

The best approach to reading these data files is the use of the FORTRAN subroutine INITEM which requires a single initialization call and then a running call for each additional record which is desired. This Fortran subroutine INITEM is available through OCR; it alleviates the problem of record structure or file format in accessing the survey file. The user shouldn't be concerned with the logic employed in the structure of the files or the method of accessing them. Exhibit A shows FORTRAN code needed to use INITEM to read an attribute/value file.

Referring to Exhibit A, IVAL is the array, dimensioned to 600, into which each logical record (either district or school) is read. Call SETINI is the initialization call for the IVAL array. Whenever INITEM (the running call) is called, another logical record will be input filling the IVAL array. The records are stored in binary form. To get a specific data element from the file, one must refer to an IVAL slot number. For instance (from Appendix A), one knows that IVAL slot number 49 contains the total number of pupils in membership from a 101 form and IVAL slot number 1 is either a 1 (district record) or 2 (school record). Therefore, if one wished to print the total number of students canvassed on the 1974 Survey, a check and a summation could be performed (referring to Exhibit A):

```
IF(IVAL(1).EQ.1)ITOTAL=ITOTAL+IVAL(49)
```

One must remember to have initially set ITOTAL to 0 (as in Exhibit A). After processing of all data, IEND the end-of-file flag (detected in the INITEM call) would cause control in the program to go to 100; the variable ITOTAL could then be printed (with the necessary PRINT and FORMAT statements specified).

There is an implicit hierarchy of record types for the information on the data file. The district record, which is designated as record type 1, always comes first. The district record is then followed by the individual school records for each and every school in that district. The school records

```

are identified by the district OE code. The district OE code is a seven digit code which has two components. The first two digits are the state sequence code starting with 10 for Alabama and running alphabetically by 1's through the entire country ending up with number 60 for Wyoming. The next five digits represent the district OE code within a state which was originally an alphabetic sequence number for the district within that state. However, with changes, consolidations, and revisions in the OE universe, these OE district codes cannot be depended upon to provide the correct alphabetical sequencing of the districts. All of the files are in OE district sequence which means that the first district is in Alabama and the last district is in Wyoming. Then, within each district, the schools are arranged by their school sequence number. For 1974, the school sequence number which was used is the school OE code which is a five digit number. All schools are in numerical sequence following the district record in which they belong.

It is important to know that while considerable effort has been made to maintain consistency of identification codes across years, there is no guarantee that this will be so. The district OE codes tend to track with fairly high reliability although there are some exceptions and inconsistencies. However, the school identification codes do not track anywhere near so well with perhaps as high as 10% or 15% disparity on a year to year basis for the individual schools.

III. SAMPLING METHODOLOGY FOR THE 1974 ELEMENTARY AND SECONDARY EDUCATION CIVIL RIGHTS SURVEY

In 1968, 1970 and 1972 the fall surveys covered a large number of school districts, generally about 8,000 separate school districts with between 70,000 and 75,000 individual schools. The selection methodology was as follows. All school districts with total enrollment greater than 3,000 were sampled with probability 1. All school districts with total enrollment between 1,200 and 2,999 were sampled with probability .75. All school districts with enrollment between 600 and 1,199 were sampled with probability .5. All school districts with total enrollment between 300 and 599 were sampled with probability .25. All school districts with populations below 300 were sampled with 0 probability. In addition, these various surveys were enriched with additional districts that were chosen because of their special compliance or other monitoring activity interest to OCR. This has resulted in some few school districts in the three large years with enrollments under 300 being covered. In 1969, 1971, and 1973 a "small" survey of high interest school districts was conducted. These small surveys were typically drawn as subsets of the previous large "even" years survey and covered approximately 3,000 school districts with between 35,000 and 40,000 schools. The school districts in these odd year surveys were generally selected on the basis of their high interest in compliance activity or their high concentrations of minority students.

In 1974 a special weighted sampling technique was utilized for drawing a statistically valid "small" sample of school districts for the 1974 Fall OCR survey. In addition, the technique gave adequate coverage to districts with attributes of special interest to OCR.

Basically, the technique formed the sampling probability as a combined function of a number of attributes of each district. (A concise technical discussion on the construction of the sampling probabilities is given in Appendix B). This technique allowed enrichment of the sample to ensure

adequate coverage of any property which was of interest to OCR (e.g. Indian students, classroom segregation, etc.). In addition, it allowed for a number of required districts to be forced into the sample.

Since the 1972 survey was the last statistically valid sample, it served as the primary data base for the 1974 sample selection. The 1972 data was, however, augmented by some data from the 1973 survey to permit sample enrichment for several items not covered in 1972 (e.g. suspension data and sex discrimination data).

This main sample was then augmented by a "complementary sample" of approximately 200 districts not included in the 1972 survey. These districts were randomly drawn from the Office of Education (O.E.) universe directory. (If any of the randomly drawn districts were surveyed in 1972, then they were simply excluded from the complementary sample.) These complementary districts when added to the districts drawn from the 1972 file, created a statistically valid 1974 sample from which full O.E. universe projections could be made.

There are presently five sampling weights (inverse of the probabilities, cf. Appendix B for explanation) on the 1974 survey file:

1. 1972 sampling weight (index slot 588) which was assigned during the drawing of the 1972 survey, as described previously.
2. 1974 main sample sampling weight (index slot 589) which was assigned as described in Appendix B.
3. 1974 sampling weight (index slot 187) which is the product of 1 and 2 above.
4. Sampling weight (index slot 592) drawn from a subset of the complementary sample including only districts with enrollments of under 300 pupils.
5. Sampling weight (index slot 593) drawn from the complementary sample, the districts not surveyed in 1972.

Referring to the equation from Appendix B

$$X_{univ} = \sum_{sample} W_i X_i$$

the universe projection of any quantity X is defined where X_i is the value of the $_i$th element of the sample and W_i is the sampling weight of that element.

Using this equation, the 1974 sampling weight (3 above) is for projections of the OE universe of school systems with enrollments of 300 or more pupils. The sampling weight in 4 above is to be employed in projections of the OE universe of districts with under 300 students. Consequently, employing these two sampling weights will give a universe projection of the entire OE universe (i.e. adding together their respective universe projections).

Using the sampling weight in 5 above, a universe projection of the complementary universe of the 1972 survey can be found. This would be the universe of schools not surveyed in 1972 and could be used to find out if any significant differences could have occurred in those districts not surveyed previously compared to those which had been surveyed. (It's possible, for example, that the fact of being surveyed might itself have caused changes in practices which might not otherwise have occurred.)

During the process of sample selection, receipt of the forms, and finalizing of the 1974 survey file, several of the originally selected districts were found to have either closed or consolidated into other districts. Also some of the school system survey forms were not received for processing. Given in Appendix C.1 is a complete list of these originally selected districts which did not appear on the final file. Depending upon the user's use and focus of each project using the 1974 file, a different re-weighting scheme may be appropriate. Re-weighting could be on the basis of the number of students enrolled, schools in a district, districts, or even regions. Consequently, the raw material for developing the appropriate re-weighting scheme is provided for the user in Appendix C.2. This consists of the 1972 enrollment data and number of schools in each of the originally sampled districts that did not appear on the final file.

Some more districts were requested by OCR for inclusion after the original sample had been drawn. Since these districts were requested after the statis-

tical weights had been assigned, they were all assigned a weight of zero to ensure the statistical validity of the sampling technique. A list of these requested changes to the 1974 OCR survey sample are given in Appendix C.3. In addition, all of the new districts formed as a result of consolidations were treated as requested districts, i.e. assigned a sampling weight of zero.

IV. DISCREPANCIES/INCONSISTENCIES ON 1974 ELEMENTARY AND SECONDARY EDUCATION CIVIL RIGHTS SURVEY FILE

A. Error Code System

The source documents received from the respondents to the survey were transcribed to computer readable form and then machine edited. The edit program scanned each record or form to check its arithmetic and logical consistency. Thus, for example, if the sum of the individual racial/ethnic categories was not equal to the entered total, an "error" was noted. In this way, the entire file of information was carefully reviewed for inconsistencies and discrepancies.

The computer system that was used to perform the edit functions also developed a coding scheme to summarize the results of the edit process. Each of the separate edit checks is assigned a separate code number that uniquely identifies the process. For example, the arithmetic inconsistency described above for total pupil membership for district form (101) was coded as number 8. Thus, every form with this error detected by the edit program had an "8" stored along with it to represent the problem. If a subsequent update or correction fixed the problem, then the 8 was removed.

The edit program was designed for the entire file as a flag device and was not foolproof. Occasionally, inconsistencies were not errors but rather inherent to the data. Through a combined effort of generating computer reports and manual checking of these reports against the original source documents (101 and 102 forms which were submitted), all records with non-error inconsistencies were purged of associated error numbers. Consequently, the error coding that is presently on the file and available for use points out true discrepancies in the reported data. For instance, error number 202 indicates non-contiguous grade span. In all cases of this error, the data was legitimate; consequently, error number 202 will not be found on the 1974 survey file and is not included in any of the documentation.

Emphasis is placed on the fact that the inconsistencies and resultant error codes are a direct consequence of the submitted 101 and 102 reports. Hopefully, the error codes will be implemented in a way to prevent the user from picking up misleading information from the files.

Appendix D is a description of the error numbers existent on the file. Exhibit B is the first page from Appendix D. On this exhibit, there are four sections of information going across the page:

1. The error code refers to the number that can be found on at least one of the records of the survey file. Originally, there were several hundred error codes. However, most errors have been resolved and no longer exist on the file. Appendix D describes only those errors which remain on the file. Referring to Exhibit B (taken from Appendix D), the first error code listed is number 7. Therefore, the inconsistencies numbered 1 through 6 no longer occur on the file.

2. The item number is the question on the 101 or 102 form that was answered inconsistently; to determine whether the item number was from the 101 or 102 form, look under the description heading. A sub-heading will state whether the items following are district or school level error codes. Looking at Exhibit B, error code 8 means that an inconsistent answer was given to question VI.A on the 101 form. Copies of the 101 and 102 forms are found in Appendix A, second and third pages.

3. The description gives a brief explanation of the inconsistency. Error code 8 on Exhibit B means that the sum of the pupils in membership by ethnicity did not equal the total number of pupils in membership that was reported. For a more illuminating description, Appendix A should be reviewed; both the copies of the forms and a specific attribute definition will be useful.

4. The index value slots are the slots in which the data can be found on a survey file record. Each one of these slots is defined fully in

EXHIBIT B

ERROR CODE	ITEM NUMBER	DESCRIPTION	INDEX VALUE SLOTS
		DISTRICT LEVEL ERROR CODES (REFER TO 101 FORM)	
7	IV	First character of Chief Administrative Officer blank	38
8	VI.A	Pupil membership - horizontal check	44-49

32	XIII.A.1.b	Number new construction sites inconsistent with new construction (yes, no)	278,84
33	XIII.A.2.a	Renovations to increase capacity (yes, no) not a 1 or a 2	85
34	XIII.A.2.b	Number of schools with renovations to increase capacity inconsistent with renovations to increase capacity (yes, no)	279,85
35	XIII.B.1	Percent minority in school with greatest percent minority blown or inconsistent with responses to new construction	86
36	XIII.B.1	Percent minority in school with greatest percent non-minority blown or inconsistent with responses to new construction	353
37	XIII.B.2	Expected minority in new school blown or inconsistent with responses to new construction	354
		SCHOOL LEVEL ERROR CODES (REFER TO 102 FORM)	
42	VI	Pupils in membership - horizontal check	112-117
43	VII	Pupils retained - horizontal check	118-123
44	VII	Pupils retained greater than pupils in membership	118-123,112-117
45	VII	Pupils retained blank and grades offered other than U, V, or S	118-123
46	VIII.A	Pupils grade 3 - horizontal check	209-214
47	VIII.B	Pupils grade 6 - horizontal check	215-220
48	VIII.C	Pupils grade 9 - horizontal check	221-226
49	VIII.D	Pupils grade 12 - horizontal check	124-129
51	VIII.A	Pupils grade 3 greater than pupils in membership	209-214,112-117
52	VIII.B	Pupils grade 6 greater than pupils in membership	215-220,112-117
56	VIII.A	Inconsistency with pupils grade 3 and grade 3 offered	214,100
57	VIII.B	Inconsistency with pupils grade 6 and grade 6 offered	220,103
58	VIII.C	Inconsistency with pupils grade 9 and grade 9 offered	226,106
59	VIII.D	Inconsistency with pupils grade 12 and grade 12 offered	129,109
61	VIII.E	Lowest grade indicated in Item VIII inconsistent with lowest grade indicated in grade span	227,96-111
62	IX	Pupils in special ed program inconsistent with special ed offered	368,374,555,561,567,111
63	IX.A	EMR/EMH - horizontal check	363-368

Appendix A. In addition, the numbers which have been typed into the copies of the 101 and 102 forms are these index value slots. As an example from Exhibit B - error code 8 which would be found on a district record on the 1974 survey file - the data for pupils in membership in the district can be found in index value slots 44-49.

Exhibit C is a listing of the summation of the errors on the survey file by error number. For each error number, the number of occurrences of the error on the file is given. This exhibit represents the summation over all records on the 1974 survey file.

In summary, on the 1974 survey file, there were 45,508 district and school records. Of this number, 671 district records and 2,839 school records had inconsistencies on them. However, there was a total of 6060 discrepancies detected on the file. This was a result of many records having several inconsistencies on them and the fact that one kind of inconsistent data would sometimes legitimately trigger several error codes.

B. Some Specific Errors

This section will deal primarily with descriptions and explanations of some of the recurring inconsistencies on the 1974 survey file. (Refer to Appendices A and D for form questions and error codes referenced.)

The error codes 31-37 refer to the item concerned with "New School Construction" on the district form. All of these error codes refer to question XIII on the 101 form.

Error numbers 70, 71 and 198 all refer to question X on the 102 form. This question was asking for information on either the number of pupils suspended or the number of suspension days for the previous year. Quite often the school knew the total number of pupils suspended or the number of suspension days but not either of these numbers by ethnicity. If this were the case, on the 102 form, a school entered zeros in the ethnic columns for the question and an actual number in the total column. Consequently, when performing a horizontal check (check of the summation of the ethnic data against the reported total on the 102 form) an inconsistency was detected. Another way these errors could be flagged is if the data was summed incorrectly by the responding school or the school did not respond. Many respondents, when contacted for corrections, indicated that they had not maintained information on suspension days or pupils suspended by ethnicity for the previous year. Therefore, they could not supply

any additional information. As a result, a large portion of the schools in some districts would respond in a similar fashion. For instance, in Philadelphia, there were 271 schools that did not respond to question X.A on the 102 form (total number of students suspended was left blank). Consequently, these 271 school records retained error number 198 on them.

There were 216 occurrences of error number 218; the majority of which occurred on Texas school records. This error code reflects the fact that the schools, in response to question XIV on the 102 form, did not enter any classroom data (pupil assignment within a school) or the total of the classroom data was left blank.

There were 634 occurrences of error number 219 and 430 occurrences of error 220. The majority of the occurrences of error 219 was in Texas and New York City schools. The majority of the occurrences of error 220 was in Texas schools. Error 219 (in response to question XI.A.1 on the 102 form) indicates that the number of PE classes was zero or blank. Error 220 (from question XI.A.2 on the 102 form) indicates that the number of other classes was zero or blank.

Appendix E is a list of the outstanding errors on the 1974 survey file. This appendix is not oriented towards the error code method of pointing out inconsistencies, but rather it explains the errors in terms of the question on the 101 or 102 forms. For an example, refer to Exhibit D, a sample page from Appendix E. For the district of Peoria Public School with district code 2331230 in Illinois, questions 7.a, 7.b, 8.a, and 8.b on the submitted district form were answered incorrectly. The subject matter of each question is briefly explained, e.g. question 7.a deals with pupils expelled. Then, indented under the specific district inconsistent responses, comes any schools within the district which had unresolved errors. Peoria High School with an OE code 3294 had inconsistencies associated with questions

2331230 - Peoria Public School - Illinois

Remaining Error:
District Form:

Q7A - (Pupils expelled).
Q7B - (number of students suspended)
Q8A - (resident pupils in another public system).
Q8B - (Resident pupils in non-public school).

#3294 Peoria High School:
Q10A - (pupils suspended for at least one day) blank.
Q10B - (total number of suspension days) blank.

#4090 Lyng El. School:
Q10A - (pupils suspended for at least one day) left blank.
Q10B - (total number of suspension days) left blank.

#4164 Von Steuben El. School:
Q10A - (pupils suspended for at least one day) left blank.
Q10B - (total number of suspension days) left blank.

#4895 Gift Ave. Home School:
Q10A - (pupils suspended for at least one day) left blank.
Q10B - (total number of suspension days) left blank.

#4902 Home & Hospital Instruction School:
Q10A - (number of pupils suspended for at least one day) left blank.
Q10B - (total number of suspension days) left blank.

#73001 Late Afternoon School:
Q10A - (number of pupils suspended for at least one day)
Q10B - (total number of suspension days) left blank.

2337080 - Springfield Public School - Illinois

Remaining Errors:

Q8C - (Dropouts) on district form has total in column 6, no racial breakdown available.

2342170 - Wheaton Community Unit, Wheaton, Illinois

Remaining error:

School 72015 - Item 10B is blank.

10.a and 10.b (were left blank). As the introductory page of the appendix explains, this is not a complete list of districts and schools found to be in error. However, it can be used as a guide for many of the unresolved district and school record errors.

C. Extraction of Error Numbers from the File

Each record on the file contains information describing which errors are present in that record. The information is represented in a simple 0-1 coding scheme that works as follows: The first "position" describes error number 1, the second position error number 2, etc. If the numerical value of the first position code is "1", then error #1 is present (i.e. "turned on"). If the first code is "0", then that error is not present in this record.

There are 288 separate error possibilities; therefore, there are 288 separate error code (or flag) positions. For example, if errors #2, 6, 9, and 18 were "on" and the rest "off", then the code array or list would look like:

0	1	0	0	0	1	0	0	1	0	0	0	0	0	0	0	0	1	0	. . .
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	

This following section need not be understood to use the file; however, it will help conceptually. The IBM 360/370 computer word has 32 bits. We have encoded the information by using the actual bit patterns in the word. Hence, the first "word" contains the on-off codes for the first 32 error messages. In the above example (2,6,9,18), the 32 bit word would have the integer value of

$$= 2^{30} + 2^{26} + 2^{23} + 2^{14}$$

In order to simplify the process of using the file, we have provided a sample of the FORTRAN necessary to extract the error codes. Exhibit E displays the Fortran code necessary to use the provided error extraction subroutine. In Exhibit F, this Fortran subroutine is listed. It is not necessary for the user to understand the logic behind the extraction method. The purpose of this subroutine is to allow the user to avoid any misleading data present on a record. In the CALL statement for the subroutine, the user

      END
```

must specify an error number which references inconsistent data. As stated before, it is essential for the user to be very familiar with this documentation to ensure not retrieving misleading information. The best approach to identifying the exact error numbers to be specified is to first refer to the 1974 survey forms (Appendix A). Locate the question number for the information that the user wishes to process. Then find any references to this question in Appendix D (listed under 'item number'). The error code numbers to be specified are then found to the left of this item number.

For the sake of efficiency, only those error numbers that refer to the exact type of data that the user is trying to access should be given in the CALL statement. For instance, if a user is trying to accumulate information on pupils suspended, then error numbers* 21, 242, 243, 71, 72, 198, 210, and 211 probably should be specified in CALL statements (however, it depends on the nature of the information to be collected). No other error numbers would have to be specified. As a suggestion to improve efficiency of this method, enter the CALL statements on the basis of the occurrences of the errors on the file in descending order (refer to Exhibit C). In this case, the error numbers called would be ordered 71, 198, 72, 21, 210, 211, 243 and 242 to correspond respectively to 661, 459, 46, 20, 14, 99 and 1 occurrences on the file.

As an example of the CALL statement, refer to Exhibit E. Any record which has error 198 on it will not be included in the processing of the data, since this error number is specified in the CALL ERROR statement. For each set of data referenced by an error number to be excluded, a CALL ERROR statement must be specified. If this statement (given in Exhibit E) were followed by CALL ERROR (IVAL, 70, &1), the program would circumvent processing any records containing error numbers 70 and 198.

---

*See Appendix D. The user has to study the data needed to learn which errors might offset it.

An alternative method of employing an error subroutine is given in Appendix F. It allows for enumeration of all error numbers found on the records. In addition to the PRINT statement given at the end of the subroutine, the name of the institution or district could also be printed.

V. NEW YORK CITY DISTRICT AND SCHOOL RECORDS

A. Constructing New York City District File

The following discussion will elaborate on the necessity of and the procedure for statistically generating a New York City district record. As mentioned in the introduction, a few hundred schools in the New York City district did not respond to the Fall 1974 OCR survey. (The New York City School System closed for the summer shortly after data submission; hence, there was no possibility of obtaining further information.) This problem was further compounded by the fact that New York City did not submit a School System Summary Report (101 form). Because of the missing school forms, a simply aggregated district record would have presented an erroneous summary of the 1974 New York City school system.

Both the size and the importance of the New York City school system warranted having available on the 1974 survey file a statistically generated summary record for New York City which would reflect not the submitted individual school forms but a projected and more accurate description of the district than reported. Therefore, it became necessary to construct a district record that would reflect the data that should have been reported. A constructed district record is meant to infer that the information present on the record has been generated through a computational process (to be thoroughly discussed) other than simply adding the individual school data for the district. Seven items on the 101 form are summations of the data reported on the 102 forms within a district. Consequently, the 102 forms that were present on the file could be used to impute some of the information that should have been present on the New York City 101 form. These 102 forms, through comparison with the previous survey data files (specifically 1973 survey file) for New York City, permitted the creation of the statistically viable district record. This is, in essence, the logic pursued in handling the problem encountered with the 1974 New York City schools.

To determine the extent of non-response by individual schools, the 1973 New York City school files were compared to the 1974 New York City school files. An attempt was made to match school records across the two years by OE codes. Through this method it was found that 259 of the 1973 schools did not have any match by OE codes to the 1974 schools. In addition, 113 of the 1974 schools did not have matches on the 1973 file; this can be attributed to schools that opened or changed (often special educational schools) and perhaps reassignment of OE code to a school which the processors were not certain matched a previous school record OE code. In the final analysis, however, at least 200 or more schools did not submit a 102 form for the Fall 1974 OCR Survey.

As a first step in constructing the district record, Table A was produced by summing each ethnicity in the total number of schools for the 1973 and the 1974 New York City district school records for (a) all records, (b) matched records, and (c) unmatched records across the two years. Using these values (found in Table A) and assuming that the schools reported in 1974 were of a similar ethnic composition as their matched 1973 counterpart (the schools did not significantly change their racial/ethnic composition in a year's time), a simple comparative equation was used to compute the 1974 expected racial/ethnic number of pupils in membership,

$$(1) \qquad \frac{73\ TOT}{73\ MAT} \times 74\ MAT = 74\ EXP$$

where 73 TOT is the 1973 total number of pupils in membership for a particular ethnicity, 73 MAT is the number of pupils in membership for the same ethnicity enrolled in the 1973 schools that matched, and 74 MAT is the number of pupils in membership for the same ethnicity enrolled in the 1974 schools that matched. The result of the equation (74 EXP) is the expected total number of pupils in membership for a particular ethnic category enrolled in the 1974 New York City district schools.

As an actual example of computing the expected values of pupils in membership, refer to Table A. Looking at the column heading American Indian, the

TABLE A

	AMERICAN INDIAN	BLACK	ASIAN	SPANISH SURNAMED	OTHERS	TOTALS	SCHOOLS
1973 TOTAL	446	403907	21955	297981	380631	1104920	1252
1974 TOTAL	499	353651	17700	263797	291715	927343	1106
1973 MATCH	396	351204	16287	254109	301375	923371	993
1973 NO MATCH	50	52703	5668	43872	79256	181549	259
1974 MATCH	498	345741	17633	256942	208590	909385	993
1974 NO MATCH	1	7910	67	6855	3125	17958	113

1973 total is 446, the 1973 match is 396, and the 1974 match is 498. Therefore, employing equation (1), the expected number of American Indians on the 1974 New York City district record is 561. This is the number that is now present on the constructed district record.

There were six additional items on the district record that could be summed from the individual school reports and scaled by ethnic composition ratios such that the computed numbers would reflect expected district numbers. The six items were:

1. Pupils in EMR or EMH classes
2. Pupils in TMR or TMH classes
3. Pupils in physical, health, and sensory handicapped special educational classes
4. Pupils in emotionally disturbed classes
5. Pupils in specific learning disability classes
6. Suspended students (at least 1 day but less than 20 days)

These six expected items were computed using the equation:

$$(2) \qquad \frac{74\ EXP}{74\ TOT} \times 74\ ITOT = 74\ EIT$$

where 74 EXP is the 1974 expected total number of pupils in membership for a particular ethnic category (computed in equation (1)), 74 TOT is the reported 1974 number of pupils in membership for the same ethnicity, and 74 ITOT is the 1974 reported number of students of the same ethnicity that are enrolled in one of the special programs or suspended (the aforementioned six items). The result (74 EIT) is the 1974 expected total by ethnicity for a particular item.

For example, the expected 1974 black enrollment in EMR is the reported 1974 black enrollment in EMR times the ratio of the expected to the reported 1974 total black enrollment. This equation assumes that for each ethnicity, the ratio of expected to reported membership in any given category (EMR, TMR,

etc.) is the same as the ratio of expected to reported membership of that ethnicity in the district.

Now, as a specific example of the method of calculating the other six items on the constructed record, the 1974 reported total (499) of American Indians is used. Using equation (2) where it is known that the 1974 number of American Indians (aggregated from school reports) enrolled in EMR/EMH classes was four and that the 1974 expected number of American Indians (calculated above) was 561, the expected number of American Indians enrolled in 1974 EMR classes was 5 [(561/499) X 4 = 5].

On the constructed New York City district record, along with the racial/ethnic breakdown, totals exist for each of the aforementioned student categories. These totals are actually the summation of the computed racial/ethnic numbers. The totals were not calculated using the equation but rather reflect the sum of the computed data for each of the six categories.

Finally, an alternative method was used to verify the calculated ethnic pupils in membership numbers. This method was basically a graphical method that used ethnic data from the years 1968-1973. The expected 1974 values were extrapolated from the graphs. Exhibit G displays the resultant graphs for black enrollment. Note that the 1974 figure derived from the graphical method was 399,000 as compared to the calculated figure of 397,624 (a .3% difference). In all cases, the two methods agreed to within 1%.

B. Accessing the New York City District File

The constructed district record on the survey data file contains the normal number 1 in IVAL slot of 1 (record type). On the file, the constructed district record comes first followed by the school records for New York City. It must be stressed that the constructed district record does not reflect the summed information that follows on the school records, but rather presumably reflects a more accurate picture of the district than that supplied by New York City.

185	Compliance Code 1. Voluntary Plan 2. Court Ordered 3. Litigation 4. 441	The compliance status of a school system was provided by the Office for Civil Rights. It was determined before the 1974 survey forms were distributed.
186	Not Used	
187	Sampling Weight	The sampling weight is the inverse of the probability with which a school system was surveyed. In 1974, it was the product of both the sampling weight provided by the program which actually determined the sample of districts to be surveyed and the 1972 sampling weights. This sampling weight can only be used for universe projections for school systems which had 300 or more students enrolled.

Index Value		Attribute Definition
588	1972 Sampling Weight 1. 1.0 2. 1.3333 3. 2.0 4. 4.0	The sampling weight is the inverse of the probability with which a school system was surveyed; it was based on the previous year's Office of Education pupil enrollment. In 1972, the weight was provided by the program which actually determined the sample of the districts to be surveyed.
589	1974 "Main Sample" Sampling Weight	This sampling weight was based primarily on several attributes, located on the 1972 survey file, which were of special interest to OCR. Some additional attributes which were not surveyed in 1972 were used from the 1973 survey file. The sampling weight was provided by the program which selected the "main sample" of districts to be surveyed in 1974.
590	Complement Sample 0 = No 1 = Yes	Indicates if a school system record was selected as a member of the "complementary sample", sample of school systems not surveyed in 1972.
591	Pupil Enrollment (1973 O.E. Universe)	Enrollment for school system that was a member of the complementary sample. For statistical reasons, it was necessary to retain this data.
592	'Under 300 pupils' sampling weight	Sampling weight if the school system in the complementary sample had under 300 students enrolled. This sampling weight allows for projections of an O.E. universe of school systems with under 300 students enrolled.
593	Complement Sampling Weight	Sampling weight for all school systems in the complementary sample. This sampling weight allows for projections of a universe of school systems not surveyed in 1972.

APPENDIX B

SAMPLING METHODOLOGY FOR FALL 1974 ELEMENTARY AND SECONDARY SCHOOL CIVIL RIGHTS SURVEY

APPENDIX B

SAMPLING METHODOLOGY FOR FALL 1974 ELEMENTARY AND SECONDARY SCHOOL CIVIL RIGHTS SURVEY

The sampling methodology developed for the 1974 Fall Elementary and Secondary School Civil Rights Survey allows enrichment of the sample to ensure adequate coverage of any property of interest to OCR such as Indian students, classroom segregation, excessive minority suspensions, etc. The technique also allows a number of required districts to be forced into the sample.

Basically, the technique consists of assigning sampling probabilities as a combined function of several attributes of a district. To understand this technique, first consider the standard technique of assigning sampling probability as a function of one attribute of a district. For example, one might multiply total enrollment by a given coefficient, say 1/3000, to obtain the sampling probability (P_1), i.e.

$$P_1 = \begin{cases} 1/3000\ X_1 & \text{if } 1/3000\ X_1 \leq 1 \\ 1 & \text{if } 1/3000\ X_1 > 1 \end{cases} \quad \text{where } X_1 = \text{enrollment.}$$

The probability that a district is sampled increases as enrollment increases until the enrollment reaches 3,000 at which time the district is included in the sample with probability 1. The coefficient (1/3000 in the example) controls both the size of the sample and the extent to which the sample is enriched with larger districts. The universal projection of enrollment is given by $X_{UNIV} = \sum_{sample} \frac{X_1}{P_1}$.

Operationally, this means that the probability of selection is computed for each district, one at a time. Then, a number between 0 and 1 is drawn at random. If the probability of selection exceeds the random number, then the district is selected. If it is below, then the district is rejected.

The sampling methodology used for the 1974 survey is simply an extension of this technique. The sampling probability is a function of several rather than one district attribute. Each attribute is assigned a coefficient depending on the desired coverage of that attribute. For example, suppose that, in addition to total enrollment, we wished to enrich the sample with districts having large Indian enrollments. We assign a coefficient, say 1/1000, to the attribute Indian enrollment and compute:

1. The probability (P_1) that a district is sampled as a function of total enrollment (X_1)

$$P_1 = \begin{cases} 1/3000\ X_1 & \text{if } 1/3000\ X_1 \leq 1 \\ 1 & \text{if } 1/3000\ X_1 > 1 \end{cases}$$

2. The probability (P_2) that a district is sampled as a function of Indian enrollment (X_2)

$$P_2 = \begin{cases} 1/1000\ X_2 & \text{if } 1/1000\ X_2 \leq 1 \\ 1 & \text{if } 1/1000\ X_2 > 1 \end{cases}$$

3. The overall sampling probability (P_s) as a function of total and Indian enrollment

$$P_s = 1 - (1 - P_1)\ (1 - P_2)$$

Let us try to explain why this particular formula behaves as we want it to. Consider

$$P = 1 - (1 - P_1)\ (1 - P_2)$$

If either P_1 or P_2, say P_1 equal 1, then

$$P = 1 - (1 - 1)(1 - P_2) = 1 - 0 \cdot (1 - P_2) = 1$$

Thus, if P_1 or $P_2 = 1$, then the sampling probability is 1, i.e., certainty. Conversely, if P_1 and P_2 equal 0, then

$$P = 1 - (1 - 0)(1 - 0) = 1 - 1 \cdot 1 = 1 - 1 = 0$$

Thus, if both P_1 and P_2 are zero, then the final probability is zero.

Finally, if P_1 and P_2 are between 0 and 1, then P itself will be between 0 and 1.

Notice that the sampling probability for a district with zero Indian enrollment (X_2) remains the same as when total enrollment (X_1) was the only attribute of interest, i.e.,

$$\text{if } X_2 = 0 \text{ then } P_2 = 1/1000\ X_2 = 0 \text{ and}$$

$$P_s = 1 - (1 - P_1) = P_1 = \begin{cases} 1/3000\ X_1 & \text{if } 1/3000\ X_1 \leq 1 \\ 1 & \text{if } 1/3000\ X_2 > 1 \end{cases}$$

The sampling probability of a district with large Indian enrollment is, however, increased. In particular, the sampling probability of a district with an Indian enrollment of 1000 is now 1.0 regardless of total enrollment, i.e.,

$$P_2 = 1/1000\ X_2 = 1/1000\ \ 1000 = 1$$

$$P_s = 1 - (1 - P_1)(1 - P_2) = 1 - (1 - P_1)(0) = 1$$

It is important to realize that by enriching our sample with districts having large Indian enrollments, we have increased the sample size. If we wished to maintain the same sample size, we would need to decrease the coefficient assigned to total enrollment (de-emphasize total enrollment).

The universal project of any quantity X is now given by

$$X_{UNIV} = \sum_{sample} \frac{X_i}{P_i} \quad \text{or} \quad X_{UNIV} = \sum_{sample} W_i X_i$$

where X_i is the value of the ith element of the sample and P_i is the sampling probability of that element, and W_i is the sampling weight of that element.

The actual attributes selected to generate the 1974 survey sample were:

1. Indian Pupils
2. Black Pupils
3. Asian American Pupils
4. Spanish Surnamed Pupils
5. Excess of Spanish Surnamed Pupils Over Pupils in Bilingual Education
6. Excessive Minority Pupil Suspensions
7. Excessive Minority Pupil Expulsions
8. Excessive Minority Pupils in Special Education
9. Deficiency of Minority Pupils in Special Education
10. Pupils in Districts Having Different Requirements Depending on Sex
11. DI (desegregation index) - Segregated Students
12. CDI (classroom desegregation index) - Segregated Students

In addition, three further district attributes were included. Total enrollment was included to insure an adequate sampling basis for any other quantities not specifically in the above list whose values would be expected to be proportional to enrollment. A minimum sampling probability (.025) was included to insure reasonable representation of very small

districts -- and hence reasonable statistics for any estimates which might be required of the number of districts (rather than of pupils) having any given property. Finally, an attribute was introduced whose value was 1 for all districts which were to be forced into the survey for special reasons. For this study, a district was forced if its 1972 status was Court Ordered, HEW plan, or Litigation -- resulting in 1473 forced districts.

Coefficients were assigned, by trial and error, to 13 of the attributes. Coefficients of 1.0 were assigned to the attributes related to minimum sample probability and forced districts.

As a final refinement, the four attributes referring to excessive or deficient minority treatment were active only after a threshold was passed. Thus, the number of minority pupils in special education, minority suspensions and minority expulsions did not affect the sampling probability unless a threshold was passed. (The threshold was based on the square root of the expected value of minority involvement in a given district - an approximation to the standard deviation). This prevents an increase in sampling probability when the value of these four attributes represent reasonable statistical fluctuations that would occur in a non-discriminatory situation.

APPENDIX C

Changes to Final File
As Related to Sampling Methodology

APPENDIX E

OUTSTANDING ERRORS ON THE 1974 SURVEY FILE

APPENDIX E

The districts listed below will contain records in error that are not delineated on the accompanying list. Because of certain exceptional reporting procedures and/or particular considerations involving the error resolution process with these districts, all errors were not resolved.

1. Los Angeles, California
2. Akron, Ohio
3. Seattle, Washington
4. Texas (a majority of the districts surveyed)

The above districts contain a varied number of errors of various types. No consistent pattern of error, or of data items in error exists.

5. Bolivar Co. #5, Mississippi has most of the data items blank on all records.
6. Aurora, Ohio contains an error in data item 11B.1 for school records 74002, 74003, and 74005. The response given is "zero" which is an invalid response to this item in these cases.
7. New York City, New York.

1100390 - Kenai Peninsula Borough, Alaska

Outstanding Errors:

Kenai Central High School

Q10A - pupils suspended 1 day but not more than 20 consecutive days - a total of 200 was given, with no ethnic or racial breakdown.

Q10B - total suspension days - a total of 500 days was given, with no ethnic or racial breakdown.

District Report

Q 7B - suspended pupils for at least one day but not more than 20 consecutive days during previous school year - figures given by district do not reflect the 200 total suspensions at the Central High School for whom the High School did not give an ethnic-racial breakdown.

1100750 - Unorganized State Schools of Alaska

Outstanding Error:

Q7A on district report blank - "The number of all pupils expelled for over 20 consecutive school days in this system during the previous school year."

1311850 - Pulaski City Spec., Arkansas

Outstanding Error:

District Form - Question 8C (Dropouts) - totals only.

1404110 - Bassett Unified School District, California

Remaining Error:

Question 8C on the District form (Dropouts) is left blank.

1409620 - Compton Unif., California

Remaining Error:

District Form: Item 8C (Dropouts) has a total in Col. 6 but no ethnic distribution in Cols. 1-5.

1410050 - Covina Valley Unified School District, California

Remaining Error:

#3548, Las Palmas Intermediate. Item 10A (Pupils suspended 1-20 Consecutive days during previous year) has total in column 6 with no ethnic distribution and Item 10B (Total suspension days) has the same condition.

1413890 - Folsom - Cordova Joint Unif., California

Remaining Error:

#4327: Mills Jr. High
Item 10A (Students suspended 1-20 consecutive days during previous year) total is 182.

Item 10B (Total suspension days in previous year) total is 137.

More pupils were suspended than the number of days of suspension shown.

1414370 - Franklin McKinley District, California

Outstanding Errors:
District Form:

Q12A - number of pupils whose primary or home language is other than English - was left blank.

Q12B3 - number of pupils receiving bilingual instruction who are minority - was left blank.

Q12B4 - number of pupils whose primary or home language is other than English who received English as a second language or (any subject matter in a language other than English) instruction.

1414550 - Fresno U.S.D., California

Remaining Errors:

(i) Q10A (number of pupils suspended for at least one day but not more than 20) and Q10B (number of suspension days) columns 1 thru 5 were not completed in the following schools:

#2	Erving Elem.	#2124	Homar Elem.
4	Wishon Elem.	2131	Lane Elem.
68	Ahwahnee Jr. High	2137	Thomas Elem.
103	Hamilton Jr. High	2219	Fresno High
720	Bullard Elem.	2236	Ft. Miller Jr. High
721	Bullard High	2331	Turner Elem.
771	McLane High	2729	Herbert Hoover High
827	Calwa Elem.	2972	Irwin Jr. High
913	Baird Elem.	3067	Addams Elem.
969	Centennial Elem.	3107	Jefferson Elem.
1084	Rowell Elem.	3147	Burroughs Elem.
1658	Easterby Elem.	3212	Muir Elem.
3486	Lafayette Elem.	3885	Kings Canyon Jr. High
3908	Lowell Elem.	5623	Gibson Elem.
4186	Mayfair Elem.	5832	Sequoia Jr. High
5908	Sierra Jr. High	6303	Roosevelt High
6281	Tenaya Jr. High	6314	Edison High
6363	Tioga Jr. High	6666	Cooper Jr. High
6593	Viking Elem.	6800	Wawona Jr. High
6815	Webster Elem.	7032	Wolters Elem.
7063	Wilson Elem.	7106	Yosemite Jr. High
73319	Tehipite Jr. High	73320	King Elem.

(ii) Q6A1 (Non-resident pupils in membership) columns 1 through 5 were not completed.

(iii) Q6A2 (same as above).

(iv) Q7B (Number of pupils expelled for at least one, but not more than 20 days) - same as above.

1416230 - Grossmont Union H.S., California

Outstanding errors:

District Report:

Q7A - (pupils suspended over 20 consecutive days or expelled) shows a total in column 6 and no ethnic breakdown of that total.

Q7B - (pupils suspended at least one day and not more than 20 consecutive days) was left blank.

Q8B - (resident pupils enrolled in non-public schools) was left blank

School Reports:

Q10 A+B - (number of pupils suspended at least one day and not more than 20 consecutive days, and the number of suspension days, respectively) is left blank at every school in the district.

1416740 - Hayward Unified School, District California

Remaining Errors:
District Form:

Q8C - is blank.

1424140 - Modesto City Elem and High, California

Remaining Error:

Q 8A, B, C on the District form is left blank except for the total.

1425470 - Montebello U.S.D., California

Remaining Errors:
District Form

Q8C (Dropouts) is blank

1426640 - Napa Valley Unified, California

Outstanding Error:

Q8C on district page (Dropouts) has a total only, with no ethnic racial breakdown in columns 1-5.

1428050 - Oakland U.S.D., California

Remaining Errors:

Q10A (number of pupils suspended for at least one day but not more than 20 days) and Q10B (suspension days) columns 1 thru 5 were not completed in the following schools:

#945	Castlemart Senior High
653	Bret Hart Junior High
1402	Dag Hammerskjold Elementary
3481	Lafayette Elementary
3593	Lazear Elementary
4759	Oakland Senior High
5533	Roosevelt Junior High
6811	Webster Elementary
6844	Westlake Junior High

1428470 - Ontario-Montclair Elem., California

Outstanding Error:

Q8C on the district report (Dropouts) is not answered.

1431320 - Pomona Unifi., California

Remaining Error:

District Form:

Item 8C (Dropouts) was not answered.

1433840 - Sacramento City Unif., California

Remaining Error: District Form

Item 6A1 - (Non-resident pupils in membership),
Item 6A2 - (Resident pupils in membership),
Item 8A - (Resident pupils enrolled in another public system),
Item 8B - (Resident pupils enrolled in non-public schools),
Item 8C - (Dropouts) all are answered for column 6 only with no ethnic distribution in cols. 1-5,
Item 7A - (Pupils expelled or suspended for over 20 consecutive days in the previous year), and
Item 7B - (Pupils suspended 1-20 consecutive days during the previous year) were not answered.

All Schools: (Total of 77)

Item 10A - (Pupils suspended 1-20 days consecutively, during the previous year) and
Item 10B - (Total number of suspension days during the previous year) were not answered.

1434170 - San Bernadino City U.S.D., California

Remaining Errors: District Form

(i) Q7B - (number of pupils suspended for at least one day but not more than 20) is blank.

#74002 Sequoia High
Item 11B (number of classes other than phys.ed.) and
Item 14 (pupil assignment within school) are not answered.

1434320 - San Diego U.S.D., California

Remaining Errors: District Form

Item 6A1 has total only

Items 8B and 8C are blank.

1434590 - San Jose Unified, California

Outstanding Error:

Q8C on the district report (Dropouts) is not answered.

1435670 - Santa Maria Joint Union High School Dist., California

Remaining Errors:

Questions 7A&B (suspension) and 8C (dropout) are left blank.

1833 - Ernest Righetti High
Questions 10A&B are left blank.

6001 - Santa Maria High School
Questions 10A&B are left blank.

7176 - Delta High Cont
Questions 10A&B are left blank.

1438010 - Stockton Unified, California

Remaining Error: District Form

Item 8A - (Resident pupils enrolled in another public school system)

Item 8B - (Resident pupils enrolled in non-public schools)

#5797 Woodruff Regional: Item 11B.1 (The number of all classes, sections or instructional groups other than physical education) was answered as zero.

Item 14 - (Pupil Assignment within school) was not answered.

#7417 King Elementary: Item 11.B.1 (The number of all classes, sections or instructional groups other than physical education) was not answered.

Item 14A (Pupil Assignment within school) was answered for grade 3 in a format that appears to represent an ungraded situation.

1438790 - Tamalpais, Co.

Remaining errors:

School 72004 Mowah Mtn. High - Item 10A (Pupils suspended 1-20 consecutive days) shows in col. 5 and col. 6 two students. Item 10B (total suspension days) shows in col. 2: 269, col 3: 66, col. 4: 60, col. 5: 2067, col. 6: 2462.

District form: Item 8B (Resident in non-public schools)
Item 6A1 - (Non-resident in membership)
Item 6A2 - (Resident in membership) shows a total in col. 6 with no ethnic distribution in cols. 1-5.

1504800 - Jefferson County, Colorado

20 schools failed to departmentalize the pupil assignment within the various grades of Q14.

SCHOOL	SCHOOL NUMBER
Alameda JHS	18
Arvada JHS	44
Arvada SHS	45
Arvada West HS	46
Carmody JHS	173
Drake JHS	301
Dunstan JHS	303
Everitt JHS	369
Evergreen SHS	371
Golden JHS	459

O'Connell JHS	72013
Pamona SHS	74001
Green Mountain SHS	74002

1604830 - Waterbury Public School System, Conn.

Outstanding Errors:

The following schools give only a total for suspended pupils in Q10A (suspension of at least one day and not more than 20 consecutive days) and do not give the number of suspended days for these suspended pupils (10B):

#214 - Crosby H.S.
#507 - J. F. Kennedy H.S.
#1099- Wilby H.S.

Also on the district page, the corresponding question to 10A-Q7B, does not reflect any of the suspensions at these aforementioned schools.

1800030 - D. C. Public Schools

Remaining errors:

School #5 - Item X.A. not answered.

District form: Item VIII.C. has only a total.

1901110 - Leon County, Florida

Remaining Error:

Q10A+B - The number of pupils suspended, and the total number of days, are left blank on school:

#72004 - James S. Richard H.S.

1901500 - Palm Beach County, Florida

Data for Item VIII.B. could only be an estimated total with the breakdown by race unobtainable. Item VIII.C. data is not maintained by the district.

2001110 - Cherokee County, Georgia

Remaining errors: District form

Item 8C - (Dropouts) has a total in col. 6 only with no ethnic distribution in cols. 1-5.

2001230 - Clayton County, Georgia

Remaining error:
District Form:

Item 8C - (Dropouts) has an answer in the total column (6) with no ethnic distribution (Cols. 1-5).

2001350 - Coffee County, Georgia

District Form:

Item 8C (Dropouts) has a total in col. 6 with no ethnic breakdown in cols. 1-5.

2003060 - Jefferson County, Georgia

Remaining Errors:
District Form:'

Item 8C (Dropouts) has total in Column 6 but no ethnic breakdown in Cols. 1-5.

2003300 - Liberty County School, Georgia

Remaining Error:

#198 Bradwell Institute

Q10A (number of pupils suspended for at least one day but not more than 20) - Columns 1-5 blank.

Q10B (total number of suspension days during previous school year) are left blank, column 1-5.

2004950 - Thomasville City, Ga.

Remaining errors:
District Form:

Item 8C - (Dropouts) has an answer in the total column (6) but no ethnic distribution in Cols. 1-5.

2005370 - Walker County, Georgia

Remaining Errors:
District Form:

Item 8C (Dropouts) - only a total is given in Column 6 with no ethnic distribution in Cols. 1-5.

2309930 - Chicago, Illinois

Q10A (Pupils suspended for 1-20 consecutive days) and Q10B (total suspension days) for all schools have no ethnic distribution (cols 1-5) for the total given in col. 6.

District report, Q 7B (sum of 10A on school forms) and 8C (Dropouts) have no ethnic distribution in cols. 1-5 for the total in col. 6.

2326400 - Moline United School District #40, Illinois

School 2858: Items 10A and 10B have totals only.
Item 14 blank.

District form: Sum of cols. 1-5 in item 7B does not equal the total in col. 6.

2331230 - Peoria Public School - Illinois

Remaining Error:
District Form:

Q7A - (Pupils expelled).
Q7B - (number of students suspended)
Q8A - (resident pupils in another public system).
Q8B - (Resident pupils in non-public school).

#3294 Peoria High School:
Q10A - (pupils suspended for at least one day) blank.
Q10B - (total number of suspension days) blank.

#4090 Lyng El. School:
Q10A - (pupils suspended for at least one day) left blank.
Q10B - (total number of suspension days) left blank.

#4164 Von Steuben El. School:
Q10A - (pupils suspended for at least one day) left blank.
Q10B - (total number of suspension days) left blank.

#4895 Gift Ave. Home School:
Q10A - (pupils suspended for at least one day) left blank.
Q10B - (total number of suspension days) left blank.

#4902 Home & Hospital Instruction School:
Q10A - (number of pupils suspended for at least one day) left blank.
Q10B - (total number of suspension days) left blank.

#73001 Late Afternoon School:
Q10A - (number of pupils suspended for at least one day)
Q10B - (total number of suspension days) left blank.

2337080 - Springfield Public School - Illinois

Remaining Errors:

Q8C - (Dropouts) on district form has total in column 6, no racial breakdown available.

2342170 - Wheaton Community Unit, Wheaton, Illinois

Remaining error:

School 72015 - Item 10B is blank.

2412810 - Wayne Township, Indiana

Remaining Error:

#115 Ben Davis Jr. High:
Item 10A (pupils suspended for 1-20 consecutive days in previous year) and
Item 10B (total number of suspension days for previous year) both have answers in Column 6 only and no ethnic distribution of the total.

2508580 - Davenport Community School District, Davenport, Iowa

Remaining error:

#578 Frank L. Smart Junior High School.
No information furnished for items 10A (number of pupils suspended for at least one day, but not more than 20 consecutive days during previous school year) and 10A (total number of suspension days during the previous school year).

2607950 - Kansas City, Kansas

Outstanding Errors:
District page:

Q7A - (suspensions for over 20 consecutive days). Only a total given - no ethnic or racial breakdowns.

Q8C - (Dropouts). Total only - no ethnic or racial breakdowns.

3000060 - Anne Arundel County Public Schools, Md.

Item 6A1 (non-resident pupils in membership in this system) - data not available by race. Only total was given.

Item 7A - (The number of pupils expelled or suspended for over 20 consecutive days) - and
Item 8A - (Resident pupils enrolled in another public school system), Item 8B - (Resident pupils enrolled in non-public schools), and Item 8C - (Dropouts) -- data not available by race and only totals given.

3000720 - Worcester County, Md.

Outstanding error:
District report:

Q8C - Gives 126 total dropouts but does not give a racial-ethnic breakdown of them in colums 1-5.

3102790 - Boston Public Schools, Massachusetts

Remaining errors:

(i) Q8C - (Dropouts) - total only given.

3106840 - Lexington, Mass.

Remaining errors:

#1266 Lexington High:

Item 9E - (pupils in programs for specific learning disabilities)
Item 10A- (pupils suspended 1-20 consecutive days in previous year), and
Item 10B- (total suspension days) have totals in Column 6 with no ethnic distribution in Cols. 1-5.

Item 14A- (Pupil Assignment within school) for Grade 10 is not answered.

District form:
Item 6B.5 - (Sum of Item 9E on school forms) Cols. 1-5 equal the sum of Cols. 1-5 from the school forms but Col. 6 is less than the sum of Col. 6.

3107740 - Methuen, Mass.

Outstanding errors:
District Form:

Item 7A (pupils suspended for over 20 consecutive days) is blank.
Item 7B (Sum of item 10A on school forms) is incorrect. Two schools gave no ethnic breakdown in cols 1-5 of the total number of students suspended (Col 6) and the totals for these two schools are not included in the districts tabulation of 7B.
Item 8A (Resident pupils in another public system), Item 8B (Residents in non-public schools), and Item 8C (Dropouts) have a total in col. 6 with no ethnic distribution in cols. 1-5.

3108610 - Newton, Mass.

Remaining Errors:
District Form:

Item 8A - (Residents enrolled in another public system) total in col. 6, no ethnic distribution in Cols. 1-5.

Item 8B - (Residents enrolled in non-public schools) total in Col. 6, no ethnic distribution in Cols. 1-5.

Item 8C - (Dropouts) have totals in Col. 6 with no ethnic distribution in Cols. 1-5.

3109930 - Randolph Public Schools, Mass.

Outstanding Errors:
District Report:

Q6B1-6B5 are left blank (all are the Spec. Ed. classifications.)

School Report:

9A-9E(Spec. Ed. classifications) blank.

4212180 - Glen Cove, N.Y.

Remaining Errors:

#1217 Glen Cove High
Item 10A (Pupils suspended 1-20 consecutive days) and
Item 10B (total suspension days) shows a total in Col. 6 with no ethnic distribution in cols. 1-5.
Item 14C (Pupil Assignment within school) for grade 9 is not answered.

District form:
Item 7B (sum of item 10A from school forms), cols. 1-5 do not equal the total in col. 6 due to the problem with school #1217.

4215090 - Huntington Union Free School District, N.Y.

Outstanding Error:

District Form:

Item 8C (Dropouts) has a total in Col. 6 but no ethnic breakdown in Cols. 1-5.

4215630 - Jamestown

District form. Racial Ethnic breakdown is needed for Q VIIIC.

4223220 - Plainview, N.Y.

Remaining Errors:

#488 Central Park Road School:

Item 8B (6th grade enrollment shows 174 non-minority students and 175 total students. The ethnic identity of the minority student is not given.

Item 9D (Students in programs for physical, health, sensory and related handicaps) total in Col. 6 with no ethnic distribution in Cols. 1-5.

Item 9E (Students in programs for specific learning disabilities) have totals in Col. 6 with no ethnic distribution in Cols. 1-5.

#1320 Mattlin JHS:

Item 10A (Pupils suspended 1-20 consecutive days in previous year) has total in Col. 6 with no ethnic distribution in Cols. 1-5.

Item 10B (Total suspension days in previous year) total in Col. 6 with no ethnic distribution in Cols. 1-5.

#1647 J. F. Kennedy High

Item 8D (12th grade enrollment) shows a total in Col. 6 with no ethnic distribution in Cols. 1-5.

4223220 - Plain View, N.Y. (Continued)

Item 14A (Pupil assignment within school) for grade 10 is not answered.

#2402 Old Bethpage School:

Item 7 (Pupils retained this year in the same grade as last year) shows a total in Col. 6 with no ethnic distribution in Col. 1-5.

#2508 Parkway School:

Item 9C (Pupils in programs for emotionally disturbed, socially mal-adjusted, underachievers, and/or slow learners) and Item 9E (see school #488) have totals in Col. 6 with no ethnic distribution in Cols. 1-5.

#2514 Pasadena School:

Item 9E (See school #488) has total in Col. 6 with no ethnic distribution in Cols. 1-5.

Item 11b1 (All classes, sections, or instructional groups other than phys. ed.) is reported as zero.

#2599 Plainview-Old Bethpage Sr. High

Item 8D (12th grade enrollment) has a total in Col. 6 with no ethnic distribution in Cols. 1-5.

Item 14A (Pupils assignment within school) for grade 10 is not answered.

#2600 Plainview Old Bethpage Jr. High

Item 14C (Pupil assignment within school) for grade 9 reports less pupils than the total enrollment of grade 9 shown in Item 8C, and line 1 (% minority) shows minority students which means it obviously cannot be 0% minority.

District Form:

The following items all have a total in Col. 6 with no ethnic distribution in Cols. 1-5.

Item 6B.1 (Sum of item 9A from school forms)

4223220 - Plain View, N.Y. (Continued)

Item 6B.2 (Sum of item 9C from school forms)
Item 6B.5 (" " " " " " ")
Item 7B (" " " " " " ")
Item 8A (Resident pupils enrolled in another public school system.
Item 8B (Resident pupils enrolled in non-public schools.)
Item 8C (Dropouts)

Items 6.B3 and 7B also show in Col. 6 a total less than the actual sum of Col. 6 from the respective items 9C and 10A on the school forms.

4224750 - Rochester City School District New York

They were unable to give racial breakdowns on Q10A (report the number of pupils suspended for at least one day but not more than twenty) and Q10B (report the total number of suspension days) on the following schools:

#535 Charlotte High School

#895 East High School

#919 Edison Ind. High School

#1124 Frederick Douglas Jr. High School

#2169 Monroe High School

#72005 Joseph C. Wilson High School

#2813 School 16. John Walton Spencer

District Form:

Item 7A is blank
Item 8C has total only

4301050 - Cumberland County, Fayetteville, North Carolina

(101) Summary Report: Totals shown in Col. 6. No data in cols. 1-5 for questions:

VII.A (Number of pupils expelled or suspended for over 20 consecutive days, in this system, the previous year.)

VII.B. (Number of pupils suspended at least 1 day, not more than 20 consecutive school days, during previous year.)
VII.C. (Dropouts.)

Totals shown in col. 6. No data in cols. 1-5.

X.A. (Number of pupils suspended 1 day, not more than 20 consecutive school days.)
X.B. (Number of days pupils suspended for) - this situation exists in these questions for the following schools:

(246) Brentwood - X.A., X.B.
(415) Anne Chestnutt - X.A., S.B.

(72006) Armstrong Junior High School - X.A., X.B.

4504379 - Cleveland Heights, Ohio

Outstanding Errors:

Q6A1 (Non-resident pupils) - only total (col.6) is given; ethnic breakdown (cols. 1-5) is not filled out.

Q6A2 (Resident pupils in membership) - only the total given.

4504379 - Cleveland Heights, Ohio (Continued)

Q8A (Resident pupils enrolled in another public school system) and

Q8B (Resident pupils enrolled in non-public schools) are unanswered.

Q8C (Dropouts) is answered with total only (col.6); cols. 1-5, which comprise ethnic breakdown, are blank.

4704740 - Eugene School District 4J, Oregon

Outstanding Errors:

District:

Q8C (Dropouts) gives a total of 281 but gives no ethnic-racial breakdown for them in cols. 1-5.

4710050 - Portland, Oregon

Nine (9) schools were not able to provide the racial ethnic breakdown of Items XA + XB.

#34	Applegate El.
#54	Atkinson El.
#87	Benson Polytech, H.S.
#447	Grant H.S.
#556	Jackson, H.S.
#645	Lent El.
#704	Madison H.S.
#727	Markham El.
#806	Mt. Tabor El.

On the district form, VIIA has a total only, with no racial/ethnic breakdown available.

4802340 - Altoona Area, Pa.

Outstanding Errors

District Form:

1. Q6A1 (Non-resident pupils in membership in school system) Altoona states that their record indicates only names and no ethnic breakdown.

4802340 - Altoona Area, Pa. (Continued)

2. Q8A (Resident pupils enrolled in another public school system). Altoona states that their records do not break this data down by race.

Question 8B (Resident pupils enrolled in non-public schools) Altoona states they have no input for feedback from the parochial schools and no way of determining ethnic information.

3. Q8C (Dropouts) Altoona states dropout records do not indicate race.

4816980 - Norristown Area School District, Pa.

Remaining Error:

School 73001

Item 14A is blank

4818990 - Philadelphia

Item 10A (Pupils suspended 1-20 consecutive days) and 10B (Total suspension days) are unanswered on all school forms.

District report: Item 6A1 (Non-resident pupils in membership), Item 6A2 (Resident pupils in membership), Item 8A (Resident pupils in another public system, and Item 8B Resident pupils in non-public school) are answered with a total in col. 6 and no ethnic distribution in cols. 1-5.

Item 7A (Pupils expelled or suspended for over 20 consecutive days) and Item 7B (Pupils suspended 1-20 consecutive days) are not answered.

4820040 - Reading School District, Pa.

No available information as to the ethnic composition of the resident pupils enrolled in another public school system (8A), resident pupils enolled in non-public schools (8B) and the dropouts (8C). Therefore, only totals are shown on the district form.

4825290 - West Chester Area School District, Pa.

Remaining Errors:

#1778 Henderson Senior, Item 10A and 10B totals only given for suspensions.

#2972 North Junior, Item 10A and 10B totals only given for suspensions.

#72002 East Senior, Item 10A and 10B no data furnished for suspensions.

4900900 - Providence Public Schools, R.I.

Remaining Errors

District Form:

(i) Q8a, (Resident pupils enrolled in another public school system) cols. 1-5 were not completed.

(ii) Q8B, (Resident pupils enolled in non-public schools) cols. 1-5 were not completed.

(iii) Q8C, (Dropouts) cols. 1-5 were not completed.

School Forms:

(i) Mt Pleasant High School #339. No data was given for Q10B (Suspension days).

(ii) Central High School #340. Same as Mt. Pleasant High School.

FALL 1976 ELEMENTARY AND SECONDARY SCHOOL CIVIL RIGHTS SURVEY

FINAL FILE DOCUMENTATION AND USERS' GUIDE

I. INTRODUCTION

This documentation is designed to accompany the Fall 1976 Elementary and Secondary School Civil Rights Survey computer file as prepared by Opportunity Systems Incorporated and its subcontractor, OBS Corporation, under contract number HEW-100-76-0199. It should be understood that the project which conducted the survey was long and complex; therefore, familiarity with the file documentation is recommended prior to use of the file. This documentation should be used in conjunction with the file to ensure minimal difficulty in obtaining accurate district and school information.

There are some discrepancies present on the file as a result of the inconsistencies that were reported on the School System Summary Reports (Form OS/CR 101) and/or the Individual School Campus Reports (Form OS/CR 102) for the Fall 1976 Elementary and Secondary School Civil Rights Survey. The file reflects the most accurate data obtainable from the respondents.

For many reasons, this file has some incomplete or inaccurate items of information on some of the school and district records. All of these problems have been noted on the file through use of an error code system. This system will be discussed at length in the documentation. In addition, some particular records (school and/or district) that possess discrepancies have been documented within the body of this report.

The technical problems associated with using the 1976 OCR file have been resolved. The discrepancies that exist presently can be identified through use of this documentation. However, the condition of the file requires that the user be both wary and knowledgeable.

As background to the Fall 1976 Survey, the reader should note that for the first time the universe of elementary and secondary public school districts (approximately 16,000) was surveyed by OCR. Each district was requested to report on the School System Summary Report (Form OS/CR 101). A subset of the universe of districts (approximately 3,650) was selected by OCR to report data for each of the schools in their system on the Individual School Campus Report (Form OS/CR 102). On this basis, districts in the 1976 Survey became known as either "101 only" districts or "101/102" districts. (A Preliminary System Summary Computer File containing 101 data for both the "101 only" districts and the "101/102" districts was released by OCR in March, 1978.)

For those users who are unfamiliar with the Elementary and Secondary School Civil Rights Survey, the following brief synopsis of the Survey history is provided.

The Elementary and Secondary School Civil Rights Survey has been conducted on a national basis since the 1968-1969 school year. The survey was annual for every year through school year 1974-1975. In 1975, this sequence was broken and a school year was missed. In school year 1976-1977, a survey was again conducted although the mailout did not occur until winter rather than the very beginning of the school year. In 1977-1978, there was no survey. The next in the series of what has now become a biennial survey is scheduled for the Fall of 1978 to cover school year 1978-1979.

During the course of these data collection activities, the survey itself has undergone considerable changes in scope, coverage, content, and methodology as the legal, judicial, and political factors have changed. During this period, the surveys have reflected the important issues and direct responsibilities of OCR at the time of the information collection. The 1976-1977 survey was the largest, most complex, and most comprehensive survey conducted. It represented a break in methodology because of the sharply increased responsibility of OCR. New areas, mainly Title IX and

Section 504, were placed within the domain of OCR and very little detailed national data were available. Thus, the 1976-1977 survey collected baseline data from all districts in the country as well as comprehensive data from individual schools in a selected number of districts.

From 1968 through 1974, the general survey methodology remained basically the same. The primary unit of survey was the school districts. School districts were chosen on a variety of bases, sometimes random, sometimes based on compliance involvement, etc. However, once a school district was chosen for inclusion in the specific survey, then every individual school in that districts was also covered. There were two basic survey instruments:

1. School System Summary Report (OS/CR 101)
2. Individual School Campus Report (OS/CR 102).

The 101 form presented summary statistics and totals of the overall school system. In many cases, this school system summary form reported the totals which were also reported on an individual school basis on the 102 survey form. In other cases, the questions on the school system summary form represented specific district-level questions which were not repeated or supported by individual school presentation of data.

In 1968, 1970, and 1972, the fall surveys covered a large number of school systems, generally about 8,000 separate school systems with between 70,000 and 75,000 individual schools. The selection methodology was as follows. All school districts with total enrollment greater than 3,000 were sampled with probability 1. All school districts with total enrollment between 1,200 and 2,999 were sampled with probability .75. All school districts with enrollment between 600 and 1,199 were sampled with probability .5. All school districts between 599 and 301 were sampled with .25 probability. All school districts with populations below 300 were sampled with 0 probability. In addition, these various surveys were enriched with additional districts that were chosen because of their special compliance or other monitoring activity interest to OCR. This has resulted in a few school districts with enrollments under 300 being covered.

In 1969, 1971, and 1973, a "small" survey of high-interest school districts was conducted. These small surveys were typically drawn as subsets of the previous large "even" year's survey and covered approximately 3,000 school districts with between 35,000 and 40,000 schools. The school districts in these odd year surveys were generally selected on the basis of their compliance activity or their high concentrations of minority students.

In 1974, another small survey of 3,000 school districts was conducted. However, in this case, the sample was randomly chosen in a manner that permitted proper statistical projection. In the previous "small" surveys, the sample was not chosen in a manner which permitted statistical projections. The large, even years, 1968, 1970, 1972, were, of course, proper samples which did permit universe projections. The 1974 sample was chosen according to a special sampling methodology that was developed for OCR to permit enrichment of the survey coverage to focus upon areas of high interest while at the same time maintaining controls over the number of districts covered and statistical projection capability.

In 1968, 1969, 1970, 1971, and 1972, these Fall surveys asked questions - at both the district and school level - about two major areas:

1. Student enrollment by racial/ethnic groupings
2. Faculty assignment by racial/ethnic groupings.

In 1973 and 1974, the responsibility for collecting faculty data was transferred to the Equal Employment Opportunity Commission and the OCR surveys were converted to pure enrollment surveys.

As mentioned above, the 1976 survey employed a quite different methodology. There were still two separate questionnaires (district 101 and school 102) but not every district received both kinds of forms. Two distinct categories of districts were defined:

1. Districts receiving 101 forms only
2. Districts receiving 101 forms and 102 school forms.

All schools in a district selected for "102" reporting were still required to respond. However, most school districts were only required to submit a 101 form.

The methodology was the following: all districts in the country received 101's. In addition, approximately 3,650 districts received 102 forms. These 3,650 districts were selected by a weighted random sampling procedure that concentrated on districts of "high OCR interest," yet maintained a capability of state-by-state as well as national projection. The end result has been a full census of nearly all districts in the nation for 101 district level data; an extensive review of 102 school level data for most of the large districts in the country; and a series of statistical projections of these 102 data to national values.

II. TECHNICAL SPECIFICATIONS FOR USING THE FILE

The Fall 1976 Elementary and Secondary School Civil Rights Survey data file is stored in a special format based on an internal data storage and analysis system used by OCR. This format is known as "word compressed attributa/value" and provides OCR a simplified system of data access, data analysis, and overall file manipulation. OCR makes available to users of the data files a FORTRAN subroutine which can be used to read the file without having to worry about the particulars of the file layout or record structure.

The data in the file were taken from the 1976 OS/CR Form 101, which each district was to complete for school year 1976-1977, and the 1976 OS/CR Form 102, which each school in a sample of districts was to complete for school year 1976-1977. However, there are errors and inconsistencies on the file and they are indicated on it by "error flags."

The remainder of this section is divided into five subsections:

A. File Structure - describing the contents of a record, the sort of the file, etc.

B. File Access - describing FORTRAN code required to read and use the file

C. Error Detection - describing the "error flags" and their use

D. Data Projection - describing the method to obtain state, regional and national projections

E. Summary Statistics - indicating number of records on file, JCL parameters required, etc.

A. File Structure

There are two record types in the file. The first is a district record which contains both the data from the OS/CR Form 101 and the associated

error flags. The second is a school record. The school record contains the data from the OS/CR Form 101 for the district in which the school is a part, the data from the OS/CR Form 102, and the associated error flags.

The records are sorted in ascending order on district OE (Office of Education) code and school OE code within districts. The districts OE code is a seven digit code, the first two digits of which are the state OE code. Exhibit A is a list of state OE codes. The last five digits uniquely identify each school district within a state. The district code within a state provides an approximate alphabetical order for district names. The school OE code is a one to five digit code which uniquely identifies each school within a district.

Data fields within the record are identified by a directory or list of meanings. The directory provides a slot (or word) number and an associated data definition for each element of the record. The directory for the 1976 file is given in Appendix A. Referring to Appendix A, for example, shows that slot 1 contains the district OE code.

In general, a data element may take more than one slot. In particular, an alphanumeric data field may take several slots - e.g. the district name is in slots 4-11. This results from the fact that one slot corresponds to one computer word and may therefore contain:

1. An integer number (e.g. 1,7765, 7611523)
2. A real number (e.g. 0.001, 7.6, 391.25, etc.)
3. Any four alphanumeric characters (e.g. ABCD, AB2C, etc.).

Appendix B contains copies of the OS/CR Form 101 and OS/CR 102 with the slot number(s) identified for each data item.

Finally, the survey file was created on an IBM 370/165 computer; therefore, all integer data are represented in 32-bit two's complement

EXHIBIT A
LIST OF OFFICE OF EDUCATION (OE) STATE CODES

OE STATE NUMBER	STATE NAME	OE STATE NUMBER	STATE NAME
10	Alabama	35	Missouri
11	Alaska	36	Montana
12	Arizona	37	Nebraska
13	Arkansas	38	Nevada
14	California	39	New Hampshire

32	Michigan	57	Washington
33	Minnesota	58	West Virginia
34	Mississippi	59	Wisconsin
		60	Wyoming

integer form. All real data are in IBM single precision real format. All alphanumeric data are in EBCDIC.

B. File Access

As previously stated, this file is in "differential word compressed attribute/value" format, which is the standard format for all of OCR's educational survey files. Attribute/value is a generalized file structure which is inherent to the Lambda Data Management System (LDMS), one of OCR's internal data management systems. Appendix C gives a brief description of this specialized format. A more detailed description is given in The OCR School Survey Data Base and Directory, published by Lambda Corporation.

To read the file, a FORTRAN subroutine, INITEM, is used. This subroutine is available through OCR and is reproduced in Appendix D.

Exhibit B shows the FORTRAN code needed to use INITEM to read the file. Referring to Exhibit B, IVAL is the array, dimensioned to 872, into which each logical record (either school or district) is read. CALL SETINI (an entry point in INITEM) is the INITEM initialization call with calling arguments:

IVAL = Data array passed
LIVAL = Dimension of IVAL (872)
IUNIT = FORTRAN input unit of file (10).

Whenever INITEM is called, another record will be "read" filling the IVAL array. The data for a single record may now be processed by inserting the appropriate code in the section labelled "PROCESS DATA." To address a particular data element, simply subscript IVAL with the slot number, given in Appendix A, for the data element of interest. For example, if one wished to print district name and total enrollment, one would refer to Appendix A to determine:

EXHIBIT B

SAMPLE FORTRAN PROGRAM USING SUBROUTINE INITEM
TO READ AN ATTRIBUTE/VALUE FILE

```
CC    CC                                  Comments
1     7
      DIMENSION IVAL (872)                Array into which data is filled
        .
        .
        .
      CALL SETINI(IVAL, 872,10)           Initialization call
        .
        .
        .
    1 CALL INITEM(IEND)                   Read one record
      IF(IEND.EQ.1) GO TO 7777            Detect end of file
        .
        .
        .
      PROCESS DATA                        User code to process one record
        .
        .
        .
      GO TO 1                             Return to read next record
 7777 CONTINUE                            Here end of file
        .
        .
        .
      WRAP UP PROCESSING                  User code for end of file processing,
        .                                     if required
        .
        .
      STOP
      END
```

NOTE: To use the 1976 Elementary and Secondary School Civil Rights Survey file, IVAL should be dimensioned to 872 as in this example.

Slots 4-11 = District name
Slot 35 = Total male enrollment in district
Slot 41 = Total female enrollment in district.

The following code might then be inserted in the section of code labelled "PROCESS DATA:"

```
    ITOT = IVAL(35) + IVAL(41)
    PRINT 101 (IVAL(I),I=4,11), ITOT
101 FORMAT (1X,8A4,I10)
```

After processing all data, IEND, the end-of-file flag detected in INITEM, would cause control of the program to go to 7777. At this point any wrap-up processing, such as the printing of accumulated state or national totals, would be performed.

While it is not important for a user to understand thoroughly the concept of "differential word compressed attribute/value" format, it is important to know that, because of the differentiation, a programmer should never change the value of a used slot (i.e. slots 1-872) when processing the data. If such change becomes necessary, the changed data should be stored in a new, unused slot (i.e. assign IVAL a subscript greater than 872) and the dimension of IVAL increased accordingly.

To accommodate the users of this file who have requested that the file be in a format suitable for SPSS, the FORTRAN code required to convert the data (excluding error flags) into SPSS format has been provided in Exhibit C. Due to the size of the file, however, it is recommended that the user extract and convert only the data elements to be used.

C. Error Detection

For the edit processing of the Fall 1976 Elementary and Secondary School Civil Rights Survey OS/CR Form 101 and OS/CR Form 102, 1,002 edit

    7 FVAL(J) = IVAL(J)
      DO 5 J=135,142
    5 MVAL(J) = IVAL(J)
      DO 6 J=142,830
    6 FVAL(J) = IVAL(J)
      WRITE(20) FVAL
      N = N+1
      GO TO 1
 7777 PRINT 4, N
    4 FORMAT (' ',I7,' RECORDS WERE WRITTEN')
      STOP
      END
```

The JCL must be supplied for FORTRAN units 10 and 20. Since an unformatted write is being used on unit 20, the RECFM subparameter of the DCB must be VBS.

checks were defined. A computer program was then written to make the checks on each district and school record. For each error detected, a separate error flag was turned "on." A number of error flags remain "on" due to:

1. Valid inconsistencies - records which turn on an edit check, but the data items are correct. For example, a district may show more students enrolled in vocational education than are enrolled in the district. This will cause the editing program to set error flags. However, in some cases, this is not an error because the additional students in vocational education are from a second school district and, therefore, not considered enrollment of the first district.
2. Erroneous data - records which turn on edit checks and are actually in error. When the file was closed, these districts were still being updated.

Appendix E is a list of all districts and schools with error flags turned "on."

To detect which errors are on, it is first necessary to reference the Edit Check Directory given in Appendix F. In this directory, each edit check is assigned a unique number. The edit check number is followed by the item number of the OS/CR Form 101 or OS/CR Form 102 question involved, the slot numbers involved, and a definition of the check being made. If the check detects an error, the associated error flag is turned "on."

The error flags are stored in a bit array, i.e. each error number corresponds to a single bit in a group of computer words. If the error is "on" the bit is set to 1, if the error is "off" the bit is 0.

For example, if edit checks 3, 6, 8 are "on," the first word in the error bit array would be as follows:

```
Bits:   1 2 3 4 5 6 7 8 9 10 . . . . .
Value:  0 0 1 0 0 1 0 1 0  0 . . . . .
```

To determine if an error is on, a special computer routine is necessary. Exhibit D is a listing of a FORTRAN subroutine ERRON which enables the user to determine if an error flag is "on." To use subroutine ERRON, an initializing call must be made prior to the running call. The initializing call is:

```
CALL INITEO (IVAL, ISTART)
```

where:

IVAL is the array containing the data

ISTART is the first word in the error bit array (for the 1976 file ISTART = 830)

The running call is:

```
CALL ERRON (IERROR, ION)
```

where:

IERROR is the edit check number

ION is the flag which indicates error on or off
if ION = 1, error is on
if ION = 0, error is off.

Exhibit E is a listing of a sample program using both INITEM and ERRON.

D. Data Projections

As stated previously, the 1976 survey methodology represents a significant deviation from that of previous OCR elementary and secondary school surveys. In the past, a statistically valid sample of all school districts was selected to receive both the OS/CR 101 and the OS/CR 102 Forms. In 1976, all school districts received the OS/CR Form 101. A sample of districts was then selected to receive OS/CR Form 102. Each school in a sampled district received a OS/CR Form 102. As a result of this survey methodology, the final 1976 file contains:

1. OS/CR 101 data on 15,715 districts
2. OS/CR 102 data on 43,738 schools in 3,617 sampled districts.

Nine of the sampled districts did not provide OS/CR 102 data. These districts are discussed in Section III - Data Anomalies.

To select the sample of districts receiving OS/CR Form 102, a weighted sampling method was used, the details of which are presented in Appendix G. The sampling weights range from 1.0 to 100.0 and can be interpreted as the number of districts in the universe represented by the sampled district. There are two types of districts in the sample:

1. "Forced" districts - a forced districts is one which OCR required to be in the sample. Districts were forced if they were under court order to desegregate, voluntary plan to desegregate, litigation, applied for ESAA funds, or of a "high interest" to OCR. There are 1,959 forced districts in the sample. The breakdown by category is:

a.	court ordered	717
b.	voluntary plan	792
c.	litigation	28
d.	OCR high interest/ESAA funds	422

   Each of the forced districts has a sampling weight of 1.0.

2. "Drawn" districts - The remainder of the districts in the sample were drawn to produce a statistically valid sample. There are 1,658 drawn districts in the sample and their sampling weights range from 1.0 to 100.0.

Non sampled districts (those receiving OS/CR Form 101 only) have a sampling weight of 0.0.

The sampled districts are projectable to state, regional, and national levels. Since all districts submitted OS/CR Form 101, there is no need to project this data. To project OS/CR 102 data, multiply the data elements of interest by the district sampling weight (IVAL slot 123) and aggregate to the desired level.

To obtain an estimate of the variance associated with a projected data element X, the following equation may be applied:

$$VAR(X) = \sum_{s} X_j^2 W_j(W_j-1)$$

where:

s is all sampled districts
X_j^2 is the value of X in the jth sampled district
W_j is the sampling weight of the jth district.

The full derivation of the expected sample variance can be found in Appendix H.

For example, Exhibit F shows a sample FORTRAN computer program which will project Trainable Mentally Retarded (TMR) enrollment to the national level. Referring to Exhibit F, IVAL is an INTEGER array dimensioned to 872, into which each record is read. REAL *4 variable WGT, is equivalenced to IVAL (123), the sampling weight. After INITEM is initialized, the file is read. If a district record is read, no processing takes place and the next record is read. If a school record is read, the enrollment in TMR (IVAL(406)) is multiplied by the district sampling weight. The result of this multiplication is then added to the national total, and the next record read. When the end-of-file is encountered, the projected national TMR enrollment is printed.

In comparing projected and actual basic enrollments, it was found that projected enrollments were approximately 4% high nationally. State projections varied from -12% low to 28% high. Exhibit G provides a comparison of projected and actual male enrollments at the state and national level.

E. Statistics

The following is a summary of some of the statistics of the Fall 1976 Elementary and Secondary Schools Civil Rights Survey file:

• Number of records on file	59,453
• Number of district records on file	15,715
• Number of districts receiving only OS/CR Form 101	12,098

- Number of districts receiving both OS/CR Form 101 and 102 — 3,617
- Number of districts in sample that are:
  - under court order to desegregate — 717
  - voluntary plan to desegregate — 792
  - litigation — 28
  - OCR high interest/ESAA funds — 422
  - drawn — 1,658
- Number of districts receiving OS/CR Form 102 with no school data — 9
- Number of school records on file — 43,738
- Maximum IVAL slot number currently used — 872
- Number of edit checks — 1,002
- Data Set Name (DSN): — ENS76.SURVEY.FILE
- DCB subparameters: — RECFM = VBS
LRECL = 804
BLKSIZE = 3220

- The tapes are 1600 BPI IBM standard label.

III. DATA ANOMALIES

Due to the various ways in which data were submitted, several data anomalies exist of which the user should be aware. These anomalies generally arise from one of the following circumstances:

A. Sex breakdown was requested in the 1976 Survey, but was frequently unavailable

B. Ungraded schools or classes optionally reported grade or age span

C. Some few districts were granted permission to submit data in variant formats, some of which were not entirely consistent with the OS/CR 101 or 102 forms

D. Some districts receiving OS/CR Form 102 did not provide school data.

Problems arising from each of the above situations will be discussed separately.

A. Sex Breakdown

In item 8c of OS/CR Form 101 and items 13, 14, 17b, 17d, 17f, 17g, 17h, and 17i of OS/CR Form 102, the sex breakdown was optional. Each of the questions were divided into three lines:

Line 1 - Males
Line 2 - Females
Line 3 - Total.

Because the provision of data by sex was optional, the user may encounter any of the following situations:

1. Only line 3 (total) was completed
2. Only lines 1 and 2 (male and female) were completed
3. All three lines were completed.

Hence, when examining these data items by sex, the user should be aware that the data will not be available for all districts. Furthermore, when examining these data items by race only, the user should examine line 3 (total) and:

1. If line 3 contains non-zero data, use this data for total pupils by race
2. If line 3 contains all zero data, use the sum of lines 1 and 2 for total pupils by race.

In items 8a and 8b1 of the OS/CR Form 101 and items 12 and 22d of the OS/CR Form 102, the sex breakdown was mandatory and the forms did not provide a total line for these questions. Some districts were unable to provide this data by sex. In all but three of these cases, the data were entered in the line for female. In Battle Creek and Saginaw, Michigan and Scarsdale, New York, the total district enrollment (item 8 on OS/CR Form 101) was entered on the male line. The user should consult Appendix E to determine if an all single sex program is due to the fact that:

1. there are only pupils of one sex enrolled or
2. the district did not provide data by sex.

Examples of districts which did not provide data by sex are Chicago Public Schools, New York City Schools, and Des Moines Public Schools.

B. Grade or Age Span in Ungraded Schools or Classes

Items 4b and 22d of the OS/CR Form 102 provide for grade or age spans in ungraded schools or classes. On the data base, the same slots are used for both grade and age spans. Each grade or age span is represented by a pair of slots, indicating the beginning and end of the span. Exhibit H provides a list of grade/age span beginning and ending slots. To determine which span is represented, the following algorithm should be used:

1. If the beginning slot contains a zero, the span is a single grade or age and its value is in the end slot.
2. If the value in the end slot is greater than or equal to 20, an age span is being represented. If the value in the end slot is less than 20, a grade span is being represented.
3. If an age span is being represented, subtract 20 from the values in the slots to obtain the age span. If a single age is represented, the user should not subtract 20 from the beginning slot.
4. If a grade span is being represented, the following codes are used to identify the grades:

APPENDIX A

DIRECTORY FOR 1976 ELEMENTARY AND SECONDARY SCHOOL CIVIL RIGHTS SURVEY: OS/CR FORM 101 AND OS/CR FORM 102

The following two directories are used to identify data fields on each record. The first directory is for the OS/CR 101 Form containing district level data. The second directory is for the OS/CR 102 Form containing school level data. Specified on each directory are:

1. Slot - number assigned data element (used when reading the file as a subscript in the IVAL array)
2. Race - for matrix data, racial/ethnic category
3. Sex - for matrix data, sex category
4. Attribute definition - definition of data element
5. Data type - alphanumeric, integer, or real
6. Item - item number on either OS/CR Form 101 or OS/CR Form 102 containing data element.

In addition, coding schemes for selected items on the OS/CR Form 102 are given on page A-22.

CODING SCHEMES FOR OS/CR FORM 102

The following codes are used to identify grades in items 8b and 22d:

Grade	Code
Pre-Kindergarden	13
Kindergarden	14
1	1
2	2
3	3
4	4
5	5
6	6
7	7
8	8
9	9
10	10
11	11
12	12

The following are the subject codes for item 22d:

Subject	Code
Art	1
Elementary Education	2
English Language Arts	3
Foreign Language	4
Health/Physical Education	5
Home Economics	6
Industrial Arts	7
Mathematics	8
Music	9
Natural Sciences	10
Office Occupation or Business	11
Other	12
Other Vocational Education	13
Social Studies/Social Science	14
Special Education	15
Title I Reading or Other Reading Class	16

APPENDIX B

OS/CR FORM 101 AND OS/CR FORM 102 WITH SLOT ASSIGNMENTS

The following are copies of the 1976 OS/CR Form 101 and the 1976 OS/CR Form 102, with the slot assignment given in the Directory (Appendix A) inserted. The slot assignments are used, when processing the file to reference data elements of interest.

FORM 101 WITH SLOT ASSIGNMENTS

The following is a copy of the 1976 101 Form with the slot assignments given in the Directory (Appendix A), inserted. These slot assignments are used, when processing the file, to reference data elements of interest.

FORM APPROVED
OMB No. 85-R0108

SCHOOL SYSTEM SUMMARY REPORT: FORM OS/CR 101
DUE FEBRUARY 1, 1977

Expires 10/31/78

REPORTING REQUIREMENT: *This report is required by HEW pursuant to Title VI of the Civil Rights Act of 1964, Title IX of the Education Amendments of 1972, and Section 504 of the Rehabilitation Act of 1973. Section 80.6(b) of HEW Regulation (45 CFR 80) issued to carry out the purposes of Title VI of the Civil Rights Act of 1964 provides:*

8-3

Compliance Reports. Each recipient shall keep such records and submit to the responsible Department official or his designee timely, complete and accurate compliance reports at such times, and in such form and containing such information as the responsible Department official or his designee may determine to be necessary to enable him to ascertain whether the recipient has complied or is complying with this Regulation.

ELEMENTARY AND SECONDARY SCHOOL CIVIL RIGHTS SURVEY: SCHOOL YEAR 1976-77

U.S. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
OFFICE FOR CIVIL RIGHTS
P.O. BOX 14198
BENJAMIN FRANKLIN STATION
WASHINGTON, D.C. 20044
TELEPHONE: (202) 347-3758

LABEL

O.E. CODE 1

GENERAL INSTRUCTIONS:

- *Please use a typewriter or print legibly in ink.*
- *Pupil membership data should be reported as of January 7, 1977 or the nearest convenient date prior to February 1, 1977.*
- *If the answer for a given item is "none" or if all elements of a matrix are "0", enter "0" in the appropriate space or in the total column only in the case of a matrix. If a particular item is not applicable in your case, enter "N/A" (not applicable) in the appropriate space or in the total column only in the case of a matrix.*
- *If forms are prelabeled incorrectly, items 1 and 2 must be completed. If pages 2-3 are not labeled, be sure to fill in the name of school system.*

1. Name of School System		2. Street Address or P.O. Box	
4-11 (usually taken from label)			
City: 16-19 (usually taken from label)	County: 12-15 (usually taken from label)	State	Zip Code: 20-21
3. Name of Chief Administrative Officer of School System			
Area Code/Telephone No.		4. How many individual school campuses are included in this school system? 22	

5. Indicate which of the following changes this school system has been involved in since September, 1974.
   a. Mark all that apply.

TYPE OF CHANGE

23 ☐ Consolidation (Two or more systems combine to form one larger system)
24 ☐ Unification (Elementary and Secondary school systems [excluding junior college or adult education programs] merge to form a unified system)
25 ☐ Division (A larger system divides to form two or more smaller systems)
26 ☐ Annexation (Transfer of schools between systems)
27 ☐ This school system has not been involved in any of the changes listed above.

   b. List the previous name(s) of the school system(s) involved in any of the changes indicated in item a. above. Be sure to include data for the school system as it is currently constituted.

6. Is this school system currently under a Federal court order to desegregate its students? ☐ Yes 28 ☐ No

7. Is the course of study leading to graduation different for males and females in this school system - either in number of credits or types of courses required for graduation? ☐ Yes 29 ☐ No

8. **PUPIL MEMBERSHIP DATA**

INSTRUCTIONS:

- *Please complete questions 8a-f, on page 2, for the 1976-77 school year, unless otherwise indicated.*
- *Please read the definitions of the racial/ethnic categories before you begin.*
- *Where indicated, provide information by sex as well as racial/ethnic category. If data is provided by sex in question 8e, you do not have to complete the "total" row.*
- *If the answer for a given item is "none" or all "0" enter "0" in the appropriate space or in the total column only in the case of the matrix. If a particular item is not applicable in your case, enter "N/A" (not applicable) in the appropriate space or in the total column only in the case of the matrix.*
- *Do not use percentages, average daily attendance, average daily membership, or year-end enrollment.*

DEFINITIONS:

Racial/Ethnic Categories: Racial/ethnic designations, as used by the U.S. Department of Health, Education, and Welfare, Office for Civil Rights, do NOT denote scientific definitions of anthropological origins. For the purpose of this report, a pupil may be included in the group to which he or she appears to belong, identifies with, or is regarded in the community as belonging to. However, no person should be counted in more than one racial/ethnic category.

(1) American Indian or Alaskan Native. A person having origins in any of the original peoples of North America.

(2) Asian or Pacific Islander. A person having origins in any of the original peoples of the Far East, Southeast Asia, or the Pacific Islands. This area includes, for example, China, Japan, Korea, the Philippine Islands, and Samoa.

(3) Black, not of Hispanic Origin. A person having origins in any of the black racial groups of Africa.

(4) White, not of Hispanic Origin. A person having origins in any of the original peoples of Europe, North Africa, the Middle East, or the Indian subcontinent.

(5) Hispanic. A person of Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish culture or origin - regardless of race.

GO TO QUESTIONS 8a-f ON PAGE 2

(Please read the instructions and definitions on page 1 before completing the following questions.) B-4

8. Pupil Membership Data - Continued	Male, Female or Total	Cat. 1 American Indian or Alaskan Native	Cat. 2 Asian or Pacific Islander	Cat. 3 Not of Hispanic Origin: Black	Cat. 4 Not of Hispanic Origin: White	Cat. 5 Hispanic	Cat. 6 Total
What was the total pupil membership in this school system on or about January 7, 1977?	Male	30	31	32	33	34	35
	Female	36	37	38	39	40	41
Definition: Vocational education programs are those programs (such as Nursing, Plumbing, and Accounting) which provide vocational or technical training, the purpose of which is to prepare the pupil for a gainful occupation. For the purpose of answering the following questions, programs which do not meet the requirements of your state vocational education plan should not be included or reflected in the data reported.							
a. How many pupils are enrolled in vocational education programs operated by this school system? (Count pupils only once regardless of the number of programs they are enrolled in.)	Male	42	43	44	45	46	47
	Female	48	49	50	51	52	53
b. How many *secondary schools* in this system administer and/or operate *five or more* vocational education programs, as defined above? 54 Schools							
c. How many pupils were suspended *for at least one school day*, or expelled from any school in this system during the 1975-76 school year? (Count pupils only once regardless of how many times they were suspended or expelled. Do not count pupils who were only out of school for less than one school day due to suspension. If no figures are available by sex, furnish total by racial/ethnic group. A breakdown by sex will be *required* in the future.)	Male	55	56	57	58	59	60
	Female	61	62	63	64	65	66
	Total	67	68	69	70	71	72
d. How many pupils in this school system have a primary or home language other than English, which these *pupils* use or speak exclusively or which these *pupils* use or speak more often than English?	Total	73	74	75	76	77	78
e. How many pupils, reported in item d. above, are enrolled in an English-as-a-Second-Language program, or, in any class taught in a language other than English (for example, a science class taught in Spanish)? Do not count pupils enrolled in a class to learn a foreign language.	Total	79	80	81	82	83	84
Definition: Special Education Programs are those designed to meet the needs of children with any mental, physical, or emotional exceptionality, including, but not limited to, educable mentally retarded, trainable mentally retarded, seriously emotionally disturbed, learning disabled, socially maladjusted, speech impaired, blind or visually impaired, deaf or hard of hearing, orthopedically handicapped, and gifted or talented. To obtain definitions for the exceptionalities, refer to the U.S. Office of Education, National Center for Educational Statistics, "Student/Pupil Accounting: Standard Terminology and Guide for Managing Student Data in Elementary and Secondary Schools, Community and Junior Colleges, Adult Education".							
f. How many pupils participate in any special education programs operated and administered exclusively by this school system? (Count pupils only once regardless of the number of programs they participate in. Do *not* include those pupils who are participating in a cooperative special education program operated with one or more other school systems.)	Total	85	86	87	88	89	90
g. Of the pupils reported in item f., how many participate in special education programs for the *educable mentally retarded or educable mentally handicapped?*	Total	91	92	93	94	95	96
h. Of the pupils reported in item f., how many participate in special education programs for the *gifted or talented?* (If there are no *special education* programs for the gifted or talented, answer question i.)	Total	97	98	99	100	101	102
i. If there are no special education programs for the gifted or talented, how many pupils participate in honors, advanced placement, or other enrichment programs?	Total	103	104	105	106	107	108

Special Education Programs

Refer to definition of Special Education Programs preceding item 8f on page 2.

a.	How many *resident*, school-age children have been identified as currently requiring special education whether or not they are enrolled in school? (Report only those pupils known to the school system at the time of reporting. It is not necessary to conduct a community survey to gather this data. All pupils who currently require special education should be counted, including those who may be sent outside of this school system for special education programs.)	8-5 109 children
b.	How many resident pupils participate in a special education program operated cooperatively with one or more other school systems?	110 pupils
c.	How many resident pupils participate in a special education program operated exclusively by another public school system? (Include only those pupils for whom full or partial payment was made from local school system or state funds.)	111 pupils
d.	How many resident pupils participate in a special education program operated by any entity other than a public school system, such as private schools, state institutions, etc.? (Include only those pupils for whom full or partial payment was made from local school system or state funds.)	112 pupils
e.	How many *nonresident* pupils participate in special education programs operated exclusively by this school system? (Include only those pupils for whom referral was made from their school system or for whom full or partial payment was made from their local school system or state funds.)	113 pupils
f.	Since the beginning of the 1976-77 school year, how many resident school age children have been out of school because of a handicapping condition? (Include children with handicapping conditions of the type listed in the definition of Special Education Programs and only those pupils known to the school system, i.e., enrolled in school, but homebound due to handicapping condition. Do not include those with temporary illnesses or injuries.)	114 children
g.	Since the beginning of the 1976-77 school year, how many of the children who have been out of school, reported in item f. above, have received or are receiving homebound instruction?	115 children
h.	Since the beginning of the previous school year (1975-76), how many resident school age children have undergone comprehensive evaluation to determine their need for special education? (Apply definition of comprehensive evaluation that is used in this school system to refer to those tests, referrals, and procedures by which a pupil is evaluated for special needs.)	116 children
i.	How many teachers in this school system are assigned to teach special education programs?	
	No. assigned full-time	117
	No. assigned part-time	118

To assure the submission of correct Title VI, Title IX, and Section 504 compliance data, please check the completeness and accuracy of each item reported. Errors or omissions may require a refiling of this form.

Certification: I certify that the information given above is true and correct to the best of my knowledge and belief. (A willfully false statement is punishable by law (U.S. Code, Title 18, Section 1001).)

FORM APPROVED:
OMB No. 85-R0110
Expires 10/31/78

REPORTING REQUIREMENT: *This report is required by HEW pursuant to Title VI of the Civil Rights Act of 1964, Title IX of the Education Amendments of 1972, and Section 504 of the Rehabilitation Act of 1973. Section 80.6(b) of HEW Regulation (45 CFR 80) issued to carry out the purposes of Title VI of the Civil Rights Act of 1964 provides:*

Compliance Reports. Each recipient shall keep such records and submit to the responsible Department Official or his designee timely, complete and accurate compliance reports at such times, and in such form and containing such information as the responsible Department official or his designee may determine to be necessary to enable him to ascertain whether the recipient has complied or is complying with this Regulation.

LABEL

DISTRICT OE CODE 1

SCHOOL OE CODE 133

GENERAL INSTRUCTIONS:

- *Please use a typewriter or print legibly in ink.*
- *Pupil membership data should be reported as of January 7, 1977 or the nearest convenient date prior to February 1, 1977.*
- *If the answer for a given item is "none" or if all elements of a matrix are "0", enter "0" in the appropriate space or in the total column only in the case of a matrix. If a particular item is not applicable in your case, enter "N/A" (not applicable) in the appropriate space or in the total column only in the case of a matrix.*
- *If forms are prelabeled incorrectly, items 1 through 3 must be completed. If pages 2-9 are not prelabeled, be sure to fill in the name of this school campus and school system.*

1. Name of School System			
2. Name of School Campus 135-142 (usually taken from label)		3. Street Address or P.O. Box of School Campus	
City	County	State	Zip Code

4. Grades Offered at this School Campus

a. What grades are offered at this school campus? (Check all that apply.)

143 ☐ Ungraded* 144 ☐ Pre-K 145 ☐ K 146 ☐ 1 147 ☐ 2 148 ☐ 3 149 ☐ 4 150 ☐ 5 151 ☐ 6 152 ☐ 7 153 ☐ 8 154 ☐ 9 155 ☐ 10 156 ☐ 11 157 ☐ 12

**If this school is totally or partially ungraded, do not check the grades covered by the ungraded span, but provide, in item 4b., the equivalent grade level or age span of the pupils enrolled in the ungraded span. For example, if a school offers grades 1, 2, 3, and 4 individually and grades 5 and 6 in an ungraded structure, check "ungraded", "1", "2", "3", and "4" in item 4a; and indicate in item 4b., grades "5" through "6".*

b. Indicate the equivalent grade levels offered or age span of pupils for the ungraded sections offered at this school campus.

Grades: 158 through 159 or Ages: 158 through 159

5. *Definition: Special Education Programs are those designed to meet the needs of children with any mental, physical, or emotional exceptionality, including, but not limited to, educable mentally retarded, trainable mentally retarded, seriously emotionally disturbed, learning disabled, socially maladjusted, speech impaired, blind or visually impaired, deaf or hard of hearing, orthopedically handicapped, and gifted or talented.*

Is this school campus composed exclusively of special education programs? ☐ Yes 160 ☐ No

6. *Definition: Vocational Education Programs are those programs (such as Nursing, Plumbing, and Accounting) which provide vocational or technical training, the purpose of which is to prepare the pupil for a gainful occupation. For the purpose of answering the following question, programs which do not meet the requirements of your state vocational education plan should not be included.*

How many vocational education programs are operated at this school campus? 161 programs

7a. Do any of the instructional buildings on this campus have the following facilities/equipment to accommodate the needs of handicapped persons?

	Yes	No	
152	☐	☐	1. Primary entrances which are ground level or which have ramps with handrails? (The slope of the ramp must not be greater than one foot height for every 12 foot length.)
153	☐	☐	2. Buildings which are single story, or an elevator provided on the entry level for access to all other levels in which instruction is given?
154	☐	☐	3. Toilet stalls, at least one each for males and females, which are both wide enough for wheelchairs and equipped with grab bars?
155	☐	☐	4. Doors with clear openings of at least 32 inches when open, to at least 50% of all classrooms, the primary entrance, and at least one bathroom for each sex?
156	☐	☐	5. Simultaneous visual* and audible warning signals for use in case of fire?

**A visual warning signal may be a sign which flashes on and off to indicate a fire.*

b. Does this school campus have any buildings or facilities that have been constructed or altered, since August 1 1968, in whole or in part using Federal financial assistance? (You may have to check with the appropriate person at the system level to secure this information.) 167 ☐ Yes ☐ No

c. How many pupils at this school campus are handicapped to the extent they need special accommodations (whether or not they are participating in a special education program)? 168 pupils

School Campus: _____

School System: _____

8a. How many physically or mentally handicapped pupils who attend this school campus require transportation to get to school because of their handicapping condition? 169 B-3 pupils

Note: If the answer is "0", go to question 9.

b. How many of these handicapped pupils, reported in item a., receive transportation to this school campus, subsidized fully or partially at city, county, state or other public expense for the explicit purpose of school attendance? 170 pupils

Note: If the answer is "0", go to question 9.

b1. Can the transportation, which is provided, accommodate persons confined to wheelchairs? 171 ☐ Yes ☐ No

9. How many pupils are currently transported to this school at public expense (i.e., subsidized fully or partially at city, county, state or other public expense) for the explicit purpose of school attendance? (This figure should reflect all pupils currently transported, including those reported in question 8b.) 172 pupils

10.a. How many pupils in grades 6-9 (or the equivalent ungraded span) are enrolled in a home economics course?	173 male	174 female
b. How many pupils in grades 6-9 (or the equivalent ungraded span) are enrolled in an industrial arts course?	175 male	176 female
c. How many of the pupils, cited in 10a. or 10b. above, are enrolled in either home economics or industrial arts classes/courses which are intended for or limited to pupils of one sex?	177 male	178 female
11.a. How many pupils in grades 7-12 (or their equivalent ungraded span) are enrolled in the highest level mathematics course offered at this school? (Include all sections of the highest level course.)	179 male	180 female
Specify name of course or program _____		
b. How many pupils in grades 7-12 (or their equivalent ungraded span) are enrolled in the highest level natural science* course offered at this school? (Include all sections of the highest level course.)	181 male	182 female
Specify name of course or program _____		

**Natural science courses are those courses organized for carrying on learning experiences concerned with knowledge of the physical and biological world, and of the processes of discovering and validating this knowledge. (Examples: biology, microbiology, physics, biophysics, chemistry, geology, organic chemistry, etc.)*

INSTRUCTIONS:

- *Please complete the chart below for the 1976-77 school year, unless otherwise indicated.*
- *Please read definitions of racial/ethnic categories before you begin.*
- *Where indicated, provide information by sex as well as racial/ethnic category. If data is unavailable by sex you may enter information for the total by racial/ethnic category in the row labeled "Total". If you provide the data by sex, you do not have to complete the "Total" row. A breakdown by sex will be required in the future.*
- *If the answer for a given item is "none" or if all elements of a matrix are "0", enter "0" in the appropriate space or in the total column only in the case of a matrix. If a particular item is not applicable in your case, enter "N/A" (not applicable) in the appropriate space or in the total column of a matrix.*
- *Do not use percentages, average daily attendance, average daily membership, or year-end enrollment.*

DEFINITIONS:

Racial/Ethnic Categories: Racial/ethnic designations, as used by the U.S. Department of Health, Education, and Welfare, Office for Civil Rights, do NOT denote scientific definitions of anthropological origins. For the purpose of this report, a pupil may be included in the group to which he or she appears to belong, identifies with, or is regarded in the community as belonging to. However, no person should be counted in more than one racial/ethnic category.

(1) American Indian or Alaskan Native. A person having origins in any of the original peoples of North America.

(2) Asian or Pacific Islander. A person having origins in any of the original peoples of the Far East, Southeast Asia, or the Pacific Islands. This area includes, for example, China, Japan, Korea, the Philippine Islands, and Samoa.

(3) Black, not of Hispanic Origin. A person having origins in any of the Black racial groups of Africa.

(4) White, not of Hispanic Origin. A person having origins in any of the original peoples of Europe, North Africa, the Middle East, or the Indian subcontinent.

(5) Hispanic. A person of Mexican, Puerto Rican, Cuban, Central or South American, or other Spanish culture or origin — regardless of race.

a. Were any students suspended or expelled from this school during the 1975-1976 school year? (Check the appropriate answer.)							
244 ☐ YES - Complete items b through i below.							
☐ NO - Complete items g, h, and i, below.							
b. How many pupils were suspended once and only once during the 1975-1976 school year? (Do not count pupils who were suspended for less than one school day.)	Male	245	246	247	248	249	250
	Female	251	252	253	254	255	256
	Total	257	258	259	260	261	262
c. Of those suspended once and only once (as reported in item b) how many pupils were suspended for:							
(1) 1-3 consecutive days	Total	263	264	265	266	267	268
(2) 4-10 consecutive days	Total	269	270	271	272	273	274
(3) 11 or more consecutive days.	Total	275	276	277	278	279	280
Note: The total number, (add row 1+2+3) in question 17c for each column should equal the total number of students in that same column in question 17b since you are reporting for the same students.							
d. How many pupils were suspended more than once during the 1975-76 school year? (Count each pupil only once regardless of the number of times suspended. In determining pupils to be reported in this item, do not consider suspensions for less than one school day, i.e., pupils reported should have been suspended more than once and at least two of their suspensions have been *for at least one school day).*	Male	281	282	283	284	285	286
	Female	287	288	289	290	291	292
	Total	293	294	295	296	297	298
e. For the pupils suspended more than once (reported in item d) how many of their *suspensions* were for:							
(1) 1-3 consecutive days	Total	299	300	301	302	303	304
(2) 4-10 consecutive days	Total	305	306	307	308	309	310
(3) 11 or more consecutive days.	Total	311	312	313	314	315	316
Note: Since data is required for the total number of suspensions in this question, each pupil suspended "more than once" must have had at least 2 suspensions (some may have had more). Therefore, the total number of suspensions (add row 1+2+3) for each column in question 17e must equal at least two times the total number of pupils suspended more than once as reported in that same column in question 17d.							
f. How many pupils were expelled during the 1975-1976 school year?	Male	317	318	319	320	321	322
	Female	323	324	325	326	327	328
	Total	329	330	331	332	333	334
g. How many pupils received corporal punishment administered by a principal or his/her designee as a formal disciplinary measure during the 1975-76 school year?	Male	335	336	337	338	339	340
	Female	341	342	343	344	345	346
	Total	347	348	349	350	351	352
h. How many pupils were referred for disciplinary action to the court or juvenile authorities during the 1975-76 school year?	Male	353	354	355	356	357	358
	Female	359	360	361	362	363	364
	Total	365	366	367	368	369	370
i. How many pupils were referred to alternative education programs as a formal disciplinary measure during the 1975-76 school year?	Male	371	372	373	374	375	376
	Female	377	378	379	380	381	382
	Total	383	384	385	386	387	388

Refer to the definition of Special Education Programs in question 5 on page 1, before answering the following question.

8-10

18. Are any Special Education Programs operated at this school campus? (Check the appropriate answer.)

39 ☐ YES If "YES", complete questions 19 and 20.
☐ NO If "NO", go to question 21.

19. SPECIAL EDUCATION PROGRAMS:

INSTRUCTIONS: *After you read the following instructions and definitions, please complete the chart on page 5.*

- *Count pupils participating in Special Education Programs operated at this school campus only.*

Report Pupils by Racial/Ethnic Group and Sex (Columns 1-6):

- *In Columns 1 through 5, report the number of pupils by racial/ethnic group. Count pupils only once in lines (a)-(i), only in the program in which they spend the most time.*
- *Columns 7 and 8 request data by sex for the total as reported in Column 6. Columns 7 + 8 should equal Column 6.*

Report Pupils by Amount of Time Spent in Special Education Programs (Columns 9-11):

- *For each of lines (a)-(i), report in columns 9, 10, 11, the total number of pupils (from Col. 6) by the total amount of time (excluding lunch and recess) each of them spends in all Special Education Programs in which they participate. Count pupils only once in Cols. 9-11 (the total of Columns 9 + 10 + 11 should equal Col. 6).*
- *Example: If John Doe spends 10 hours per week in a program for the Educable Mentally Retarded and 6 hours per week in a program for the Orthopedically Handicapped, he would be reported in line (a) in the appropriate racial/ethnic category (since he spends most of his time in a program for EMR). Also, because he spends a total of 16 hours per week in all special education programs in which he participates (out of a total of 25 hours per week in school), he would then be counted once under Column 10 of line "a".*
- *If there are no pupils in a category, enter "0" in the total column. Do not leave any blank spaces.*

Definitions of Special Education Categories (Taken from the USOE/NCES–"Student/Pupil Accounting: Standard Terminology and Guide for Managing Student Data in Elementary and Secondary Schools, Community and Junior Colleges, Adult Education"):

Educable Mentally Retarded (or Handicapped). *Mentally retarded pupils who are educable in the academic, social, and occupational areas even though moderate supervision may be necessary.*

Trainable Mentally Retarded (or Handicapped). *Mentally retarded pupils who are capable of only very limited meaningful achievement in the traditional basic academic skills but who are capable of profiting from programs of training in self-care and simple job or vocational skills.*

Seriously Emotionally Disturbed. *Pupils who have been identified by professionally qualified personnel as having an emotional handicap of such a nature and severity as to require one or more special services, particularly with reference to their education, whether or not such services are available. These services – for conditions such as autism and schizophrenia or other psychotic conditions – include but are not limited to institutional care, other professional treatment or care, and instruction in special classes for exceptional pupils on a full or part time basis.*

Specific Learning Disabled. *Pupils who have learning dysfunctions that limit their ability to learn or function in a regular educational program. These pupils exhibit disorders in one or more of the basic processes involved in understanding or using spoken or written language. These may be manifested in disorders of listening, talking, and the cognitive processes involved in reading, writing, spelling, or arithmetic. This includes conditions that have been referred to as perceptual handicaps, brain injury, minimal brain dysfunction, dyslexia, developmental aphasia, etc. This term does not include pupils who have learning problems that are primarily the result of visual, hearing, or motor handicaps; mental retardation; emotional disturbance; or environmental disadvantage.*

Speech Impaired. *Pupils who have a severe impairment in emitting sounds, words, or phrases–including extreme difficulties such as stuttering, voice disorders, and receptive or expressive oral language disorders–that adversely affects the performance of a pupil in the regular school program. This is not to be confused with a language (or communications) difficulty arising from lack of experience with the language of instruction. Speech difficulties expected to disappear with the child's normal development are not included here.*

Orthopedically Handicapped (Crippled). *Pupils who have an orthopedic condition of a type that might restrict normal opportunity for education or self-support. This term is generally considered to include pupils who have impairments caused by congenital anomaly (e.g., clubfoot, absence of some limb, etc.), impairments caused by disease (e.g., poliomyelitis, bone tuberculosis, encephalitis, and other neurological involvement that may result in conditions such as cerebral palsy or epilepsy, etc.), and impairments caused by accident (e.g., fractures or burns that cause contractures, etc.).*

Blind or Visually Impaired. *Blind pupils are those who are sightless or have severely impaired vision, according to the applicable legal definition. Blindness is commonly defined in ophthalmological terms as follows: Having central visual acuity of 20/200 or less in the better eye with corrective glasses; or having a field defect in which the peripheral field is restricted to such an extent that the widest diameter of the visual field subtends an angular distance no greater than 20 degrees. Visually impaired is usually defined according to the Snellen scale as having better than 20/200 central visual acuity in the better eye after correction but with a progressive eye difficulty or with a serious limitation in one or more other visual functions. In most cases, pupils having between 20/70 and 20/200 central visual acuity are considered to have a serious visual limitation and to require a special educational program.*

Deaf or Hard of Hearing. *Deaf pupils are those in whom the sense of hearing is nonfunctional for the purposes of life (inability to hear connected language with or without the use of amplification). This general group is made up of congenitally deaf and adventitiously deaf. Hard of hearing pupils are those in whom the sense of hearing, although defective, is functional with or without a hearing aid. The hearing less is generally of a nature and severity as to require one or more special educational services.*

Other Health Impaired. *Pupils who are handicapped in their educational progress because of limited strength, vitality, and alertness due to chronic health problems such as a heart condition, tuberculosis, rheumatic fever, nephritis, asthma, sickle cell anemia, hemophilia, epilepsy, lead poisoning, leukemia, diabetes, or other illness.*

Multihandicapped. *Pupils who have more than one handicapping condition (i.e. Deaf-blind, Retarded-blind, Retarded-deaf, Retarded-orthopedic, Seriously emotionally disturbed – other special condition).*

Gifted or Talented. *Pupils identified by professionally qualified personnel as being advanced in their mental development and/or capable of high performance in one or more areas of special competence. Among these areas of special competence are creativity, leadership ability and social adeptness, and facility in the productive and performing arts. (Do not report pupils in honors, advanced placement or other enrichment programs for the gifted or talented that are not special education programs.)*

. Special Education Programs

Count pupils only once, in lines a-j in the program in which they spend the most time. Report the number of pupils participating in special education programs for this school campus) designed for:

	Pupils Participating in Special Education By Racial/Ethnic Group and Sex								Pupils By Total (Excluding Lun Spent in All Special Ed. In Which They Participate	Time on Programs	
	Col. 1	Col. 2	Col. 3	Col. 4	Col. 5	Col. 6	Col. 7	Col. 8	Col. 9	Col. 10	Col. 11

(k) Gifted or Talented	542	543

. If this school campus has no special education program for the *gifted or talented*, report the number of pupils in honors, advanced placement or other enrichment programs.

	No. of Pupils
American Indian or Alaskan Native	544
Asian or Pacific Islander	545
Black, not of Hispanic Origin	546
White, not of Hispanic Origin	547
Hispanic	548

. PUPIL ASSIGNMENT

The following question represents a new way of securing data on pupil assignment within schools. While it may appear longer and more involved, if you read through the instructions carefully you will see that this method is easier than similar questions previously used and actually reduces the amount of work required by you or your staff.

This section of the questionnaire is designed to collect data on the number of students assigned to a selected group of 18 classes or instructional groupings. There are two methods for selecting the 18 classes to be included. Both methods are based on a list of teacher names. Question 22a. will direct you to the selection method (given in 22b. or 22c.) appropriate for your school. In no case will it be necessary to collect data on more than 18 classes.

After selecting the 18 classes you will be requested to complete the chart on page 9. Instructions for reporting the selected classroom data are given in 22d. Please read all definitions and instructions carefully.

EFINITIONS

Full-time classroom teachers - *staff persons who are considered by your school to be employed full-time for the purpose of instructing pupils (regardless of the subject area they teach).*

Class or Instructional Grouping - *is a group of pupils assigned to one or more teachers for a given period of time for instruction in a situation where the teacher(s) and the pupils are in the presence of each other.*

Self-contained class - *a class or instructional grouping which has the same teacher or team of teachers for all or most of the daily session.*

School Campus: _____

School System: _____

22.a. Please put an "X" in the appropriate box

The number of full-time classroom teachers at this school is:

(1) 18 or less ☐ 549

(2) 19 or more ☐

B-12

If you checked box (1) 18 or less, use Selection Method A given in 22b.

If you checked box (2) 19 or more, use Selection Method B given in 22c.

22.b. Selection Method A

This selection method is for schools with 18 or less full time classroom teachers. (If your school has 19 or more teachers, go to Selection Method B in 22c.) The instructions are presented with examples. Please answer all questions contained in the instructions.

INSTRUCTIONS

STEP 1 Teacher name list

Take an alphabetical list of all full-time classroom teachers at this school on or about January 7, 1977. (If such a list is not available construct one or use some other available non-alphabetical list of teachers such as a payroll list.) Save a copy of this list for your records. This list will be referred to as the teacher name list.

a. Is teacher name list alphabetical? ..... ☐ Yes ☐ No

b. How many full-time classroom teachers are at this school? (Count number of names in teacher name list.) ..... 550 Teachers

STEP 2 Enter teachers' initials in Pupil Assignment Table*

Starting from the top of the teacher name list enter the first teacher's initials on line 1 of the pupil assignment table given on page 9. Enter the initials of the next teacher on line 2 of the pupil assignment table. Continue this process until you reach the end of the name list. If two or more teachers have the same initials, place the number 1, 2 etc. next to their initials on the table to indicate the order in which they appear on the teacher name list. All 18 lines on the table must be filled. If you have less than 18 teachers and reach the end of the teacher name list before all lines of the table have been filled go back to the top of the teacher name list and continue the process.

**If you prefer, you may enter some type of teacher identification number in the table instead of initials; however, keep a record of which teacher's number you are entering on each line of the table.*

STEP 3 Go to 22d. instructions for completing the Pupil Assignment Table.

EXAMPLES

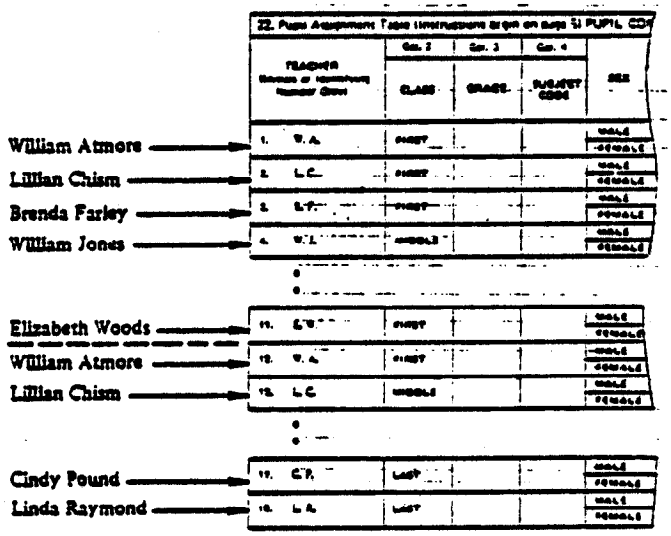
STEP 1 Teacher name list

William Atmore	Lloyd King	Mary Taylor
Lillian Chism	Cindy Pound	Marjorie Team
Brenda Farley	Linda Raymond	Elizabeth Woods
William Jones	Robert Smith	

a. Is teacher name list alphabetical? ..... ☒ Yes ☐ No

b. How many full time classroom teachers are at this school? (Count number of names in teacher name list.) ..... 11 Teachers

STEP 2 Enter teachers' initials in Pupil Assignment Table



22.c. Selection Method B

This selection method is for schools with 19 or more full time classroom teachers. The instructions are presented with examples. Please answer all questions contained in the instructions

INSTRUCTIONS

STEP 1 Teacher name list

Take an alphabetical list of all full-time classroom teachers at this school on or about January 7, 1977 (If such a list is not available construct one or use some other available non-alphabetical list of teachers such as a payroll list.) Save a copy of this list for your records. This list will be referred to as the teacher name list.

a. Is teacher name list alphabetical? ..... ☐ Yes ☐ No

b. How many full-time classroom teachers are at this school? (Count number of names in teachers name list.) ..... _____ Teachers

EXAMPLES

STEP 1 Teacher name list

John Adams	Brenda Farley	Gary Nathan
James Andrews	Ronald Green	George O'Connor
William Atmore	Nancy Heart	Cindy Polanski
Mary Baker	William Jones	Dolores Rodriguez
Robert Chang	Mary Kane	Linda Russo
Lillian Chism	Lloyd King	Diane Steinberg
Anita Danzig	John Landon	John Washington
Barbara Edwards	Christine Martin	

a. Is teacher name list alphabetical? ..... ☒ Yes ☐ No

b. How many full time classroom teachers are at this school? (Count number of names in teacher name list.) ..... 23 Teachers

22.c. Selection Method B - Cont.

STEP 2 Selection Number

Take the number of full-time classroom teachers (as reported in STEP 1) and find the selection number in the chart below.

a. Enter the selection number found in chart .... 551 (Selection Number)

STEP 2 Selection Number B-13

Find selection number in chart

Number of Teachers 23

Selection Number 3

a. Enter the selection number found in chart ..... 3 (Selection Number)

Number of Teachers	19-50 except →	21, 24, 27, 33, 36, 39, 42 and 48	51-75 except →	55, 60, 65, and 75	76-100 except →	77, 84, 91, and 98	101-150 except →	108, 117, 126, 135 and 144	151-200 except →	154, 165, 176, 187, 198	201 + except →	all numbers greater than 201 which are exactly divisible by 15
Selection Number	3	5	5	7	7	8	9	10	11	12	15	16

INSTRUCTIONS

STEP 3 Enter teachers' initials in Pupil Assignment Table*

Start from the top of the teacher name list and count teacher names until the selection number is reached. Enter that teacher's initials on line 1 of the pupil assignment table. Be sure to keep a record of which teacher's initials you are entering on each line of the pupil assignment table.

Then, starting with the next teacher, begin counting from 1 and continue until the selection number is again reached. Enter this teacher's initials on line 2 of the pupil assignment table.

If two or more teachers have the same initials, place the number 1, 2, etc., next to their initials on the table, to indicate in which order they appear on the teacher name list.

Continue this process until the end of the teacher name list is reached. At this point continue counting by going back to the top of the teacher name list. When you again reach the selection number, add that teacher's initials to the list. See Example. A teacher's initials should be entered in the pupil assignment table as many times as that teacher is selected. Continue this process until all lines of the pupil assignment table have been filled.

If you prefer, you may enter some type of teacher identification number in the table instead of initials; however, keep a record of which teacher's number you are entering on each line of the table.

STEP 4 Go to 22d. instructions for completing the Pupil Assignment Table.

EXAMPLES

STEP 3 Enter teachers' initials in Pupil Assignment Table

Count	Teacher's Name
1	John Adams
2	James Andrews
3	William Atmore (Enter initials "W.A." in line 1 of table)
1	Mary Baker
2	Robert Chang
3	Lillian Chism (Enter initials "L.C." in line 2 of table)
1	Anita Danzig
2	Barbara Edwards
3	Brenda Farley (Enter initials "B.F." in line 3 of table)
1	Ronald Green
2	Nancy Heart
3	William Jones (Enter initials "W.J." in line 4 of table)
1	Mary Kane
2	Lloyd King
3	John Landon (Enter initials "J.L." in line 5 of table)
1	Christine Martin
2	Gary Nathan
3	George O'Connor (Enter initials "G.O." in line 6 of table)
1	Cindy Polanski
2	Dolores Rodriguez
3	Linda Russo (Enter initials "L.R." in line 7 of table)
1	Diane Steinberg
2	John Washington
	END OF LIST, CONTINUE COUNTING
3	John Adams (Enter initials "J.A.-1" in line 8 of table)
1	James Andrews
2	William Atmore
3	Mary Baker (Enter initials "M.B." in line 9 of table)
1	Robert Chang
2	Lillian Chism
3	Anita Danzig (Enter initials "A.D." in line 10 of table)
1	Barbara Edwards
2	Brenda Farley
3	Ronald Green (Enter initials "R.G." in line 11 of table)
1	Nancy Heart
2	William Jones
3	Mary Kane (Enter initials "M.K." in line 12 of table)
1	Lloyd King
2	John Landon
3	Christine Martin (Enter initials "C.M." in line 13 of table)
1	Gary Nathan
2	George O'Connor
3	Cindy Polanski (Enter initials "C.P." in line 14 of table)
1	Dolores Rodriguez
2	Linda Russo
3	Diane Steinberg (Enter initials "D.S." in line 15 of table)
1	John Washington
	END OF LIST, CONTINUE COUNTING
2	John Adams
3	James Andrews (Enter initials "J.A.-2" in line 16 of table)
1	William Atmore

hool System: _____

B-14

d. Instructions for Completing Pupil Assignment Table

At this point you should have a teacher, identified by initials or a number, entered into each line of the Pupil Assignment Table. If you do not, go back to the Selection Method appropriate for your school and read the instructions again. You will be reporting information on the pupils in the class or instructional grouping (not homeroom, study hall, etc.) taught by the teacher whose initials were entered in the pupil assignment table.

ep 1 - Class

On this table there is a column labeled CLASS (column 2) that contains the word FIRST, MIDDLE or LAST. This refers to a teacher's first, middle or last instructional grouping of the day. For each teacher in the table, determine the instructional grouping of interest as indicated by the word first, middle or last. In the example, Atmore's initials are on line 1 which requests information on his first instructional grouping of the day. If there are two possible middles, enter the earlier, e.g., 4 classes, enter 2nd class. If a teacher has only one instructional grouping during the day (for example, self-contained, elementary classes), enter information for that grouping regardless of whether table says first, middle or last. If a teacher has different instructional groupings depending on the day of the week, enter information for Monday. For each line of the table, enter the information for the instructional grouping specified as instructed in steps 2-4.

ep 2 - Grade

In column 3, enter the grade or grade span of the pupils in the specific class being reported. If the class is ungraded, enter the equivalent grade level or age span.

ep 3 - Subject Code

In column 4, enter the subject code number as determined from the Subject Code List below. Enter the code for the subject area that most closely resembles the material being taught.

ep 4 - Pupil Enrollment by Race and Sex

In columns 5-10, enter the number of pupils, in the designated class, by racial/ethnic category and sex.

If any class, for which pupil enrollment data are being reported, is exactly the same as a class previously reported (i.e., no change in teacher, designated class, grade, and subject matter), enter the words "Same as line _____" in columns 5-10 of the line corresponding to the repeated class and reference the previous line of the table which contains the same data.

IF YOU ENCOUNTER ANY DIFFICULTY IN DETERMINING HOW A PARTICULAR CLASS SITUATION FITS WITHIN THE INSTRUCTIONS PROVIDED, OR IF YOU DO NOT UNDERSTAND A PARTICULAR STEP OF THE INSTRUCTIONS, PLEASE CALL THE SURVEY MANAGER FOR ASSISTANCE. (202) 347-3755.

CAMPLE – Completing Pupil Assignment Table:

APPENDIX C

DIFFERENTIALLY WORD COMPRESSED ATTRIBUTE/VALUE FORMAT

The 1976 Elementary and Secondary School file, like previous OCR Elementary and Secondary School files, is stored in a "differentially word compressed attribute/value" format.

To understand this format, it is necessary to analyze the term "differentially word compressed attribute/value." Therefore, let us first examine the meaning of "attribute/value."

"Attribute/value" is a format for storing data in which, for each data element, two pieces of information are stored:

1. A slot number (used to identify the data)
2. The actual data element or "value"

Slot numbers are assigned in a directory (the 1976 directory is given in Appendix A).

To understand the concept of attribute/value consider the following example: For District A, assume the following data are available:

OE code = 1071467
Enrollment = 17098
Number of schools = 3
Lowest grade offered = 1
Highest grade offered = 12

and that the following slot assignments have been made:

OE code = 1
Enrollment = 2
Number of schools = 3
Lowest grade offered = 4
Highest grade offered = 5

An attribute/value record for this data would then appear as:

1, 1071467, 2, 17098, 3, 3, 4, 1, 5, 12, -1

where the slot number is entered followed by the actual data. The "-1" indicates the end of the record.

It appears, at this point, that the file contains twice as much data as is necessary. However, the remaining part of the term "differentially word compressed" must now be applied. Under this concept, only data elements whose value is different from the previous record are stored.

Combing both concepts, the algorithm for writing a "differentially word compressed attribute/value" file is as follows:

1. For the first record, the slot number and data value are written as a pair of words for each non zero slot.
2. For all subsequent records, the slot number and data value are written for each slot different from the previous record.
3. End of record is denoted by a minus one (-1).
4. End of file is denoted by a minus two (-2).

The following is an example of a differentially word compressed attribute/value file:

Slot	1	2	3	4	5	6
Record 1	20	3	0	12	9	40
Record 2	20	3	6	18	10	40
Record 3	21	4	5	18	10	43

The first record would be written out as follows:

1 20 2 3 4 12 5 9 6 40 -1

The second would be written as follows:

3 6 4 18 5 10 -1

The third:

1 21 2 4 3 5 6 43 -1

The entire file of three records would be:

```
1  20  2  3  4  12  5  9  6  40  -1
3  6  4  18  5  10  -1  1  21
2  4  3  5  6  43  -1  -2
```

Experience has shown that there is usually considerable similarity between consecutive records so the net result is a savings in physical storage space.

A word of caution to the user of a differentially compressed file: Because of the differentiation (only writing out the changes from the previous record), a programmer should never change the value of a "live" slot when processing the data.

APPENDIX D
FORTRAN SUBROUTINE INITEM

The FORTRAN subroutine INITEM, which follows, is an I/O routine used to read differentially word compressed attribute/value files. When using this I/O routine, an initializing call is required prior to reading the file. This initializing call is:

```
CALL SETINI (IVAL, LIVAL, IUNIT)
```

where:

IVAL is the array where the data list will be stored
LIVAL [1/] is the length (in words) of the IVAL array
IUNIT is the FORTRAN unit number of the input unit.

The running call for this I/O routine is:

```
CALL INITEM (IEND)
```

where

IEND is the end of the file flag
if IEND = 0, not EOF
if IEND = 1, EOF.

Each call to INITEM will place the next record in the IVAL array.

1/ LIVAL must be less than or equal to the dimension of IVAL and greater than or equal to the maximum slot number in the file.

INITEM - A FORTRAN SUBROUTINE FOR READING A WORD COMPRESSED ATTRIBUTE/VALUE FILE

```
CC    CC
1     7

      SUBROUTINE INITEM(IEND)
      DIMENSION IVAL(1),LBUF(200)

      END
```

APPENDIX E

RECORDS WITH EDIT CHECKS "ON"

This appendix is divided into two sections:

1. The first section contains those districts with edit checks turned on because of exceptional submission of data or those which have gross errors which are too numerous to delineate.
2. The second section contains those records for which the errors have been delineated.

The user should be aware that this appendix does not address the errors in Florida, Texas, and Los Angeles Unifed School District, which are discussed in detail in Section III - Data Anomalies.

Section I

The districts listed in this section have edit checks "on" because of exceptional submission of data or gross errors too numerous to delinate. The districts are listed in order of district OE code. For each district, the following data are displayed:

1. district OE code
2. district name
3. state abbreviation
4. type of district: 101-district received OS/CR Form 101 only
   101/102-district received both OS/CR Form 101 and OS/CR Form 102
5. code describing type(s) of errors, where:

Code	Description of error
1	Gross errors in most records/items.
2	Gross errors or omissions in item 22 of the school records.
3	Gross errors in the district record, data on school records insufficient to enter on file.
4	Records lack sex breakout of enrollment data; enrollment data entered on data line "female."
5	Records lack sex breakout of enrollment data; enrollment data entered on data line "male."
6	The district record lacks sex breakout of vocational education enrollment data. This data entered on data line "female."
7	No data for item 8b2 of the OS/CR Form 101.
8	No racial/ethnic breakout for data in item 8c of the OS/CR Form 101.
9	The total special education enrollment is given for each record with no data in the eleven categories of special education on the school records. No data for the requested number of special education teachers on the school records. Special education data was supplied by the SEA, but other data on the same records were supplied by the LEAs, hence, consistency may be lacking.

OE CODE	DISTRICT NAME	STATE	TYPE OF DISTRICT	ERROR TYPE

C. Exception Submissions

1. Florida

The original data submission from Florida school districts was in computerized format on a tape supplied by the Florida Department of Education. Included on that data file were entries for schools not generally included in the elementary and secondary school survey, e.g. "adult" schools. These were purged from the file upon incorporation into the OCR file.

Given the centralization of the Florida submission through the SEA and its delivery as a complete file, error resolution was not pursued via the LEAs. Corrections were available only in instances where programming or data reduction activity by Florida had led to errors in the data.

The district records may contain errors or omissions that were not resolved due to the above consideration. Most omissions result from the data item involved not having been collected by the Florida SEA.

Finally, the submitted data did not give enrollment (item 8a on OS/CR Form 101 and item 12 on OS/CR Form 102) by sex. Florida indicated, however, that the enrollment in school districts was approximately 52% female

and 48% male. Hence, for each district in Florida, enrollment by sex was calculated by applying these percentages to the total enrollment figures given.

2. Texas

All records for Texas will be essentially "raw" data. The submission of data for Texas districts was through the Texas SEA and no contact was made with Texas LEAs.

Problems involving logistics, resources, and timing precluded the performance of full error resolution through the SEA; therefore, per OCR instructions, corrections to data items in error at original submission were not secured. There is a resulting range of errors of various types in the records for Texas school districts.

3. Los Angeles

Los Angeles submitted data on both tape and in hard copy format. They did not provide OS/CR Form 101 and 102 data but rather indicated that the requested data could be computed by using school teacher level data. This was done and results entered into the 1976 survey file. The majority of errors in the Los Angeles data are errors of omission. The following data elements are omitted:

Item	Form	Description
8d 15	101 102	Pupils whose primary or home language is other than English
13	102	Pupils who dropped out or discontinued school during school year 1975-76
17c	102	Pupils suspended once and only once for 1-3 days, 4-10 days, 11 or more days
17e	102	For the pupils suspended more than once, how many of their suspensions were for 1-3 days, 4-10 days, or 11 or more days

Item	Form	Description
17g	102	Pupils receiving corporal punishment
17h	102	Pupils referred to juvenile authorities
17j	102	Pupils referred to alternative education programs

In addition to these omissions, the following situations occurred:

1. Los Angeles has no special education programs for the gifted or talented and, hence, item 8f2 on the OS/CR Form 101 and item 19e on OS/CR Form 102 are always zero.
2. Los Angeles could not provide an unduplicated count of pupils enrolled in vocational education programs (item 8b1 on OS/CR Form 101), hence, the user should be aware that the figures are inflated.
3. The data supplied by Los Angeles indicated that all pupils in special education programs operated by elementary schools were enrolled in such programs full-time. In secondary schools, however, it was not possible to determine the amount of time pupils spent in special education programs. Hence, in item 19 on the OS/CR 102 Forms columns 9-11, pupils by amount of time spent in special education programs, all pupils in special education were entered in column 11 (full-time) for elementary schools while columns 9-11 all contain zeros for secondary schools.

D. Incomplete OS/CR 102 Forms

The following districts were sent OS/CR Form 102, but do not have school data on file:

District OE Code	State	District Name
1600510	CT	Bristol
1602490	CT	Middletown
1604230	CT	Southington
1604440	CT	Stratford
1604680	CT	Vernon
3112450	MA	West Brookfield
5313410	TX	Centerville ISD
5325470	TX	Kennard ISD
5333840	TX	Ord City ISD

OE CODE	DISTRICT NAME	STATE

5600270	Arlington County	VA	101/102	1
				2

Section II

This section contains those records for which the errors or inconsistencies have been delineated. The records are listed in district O.E. code order with a new page beginning with each state. The following information is displayed for each record:

1. district O.E. code
2. district name
3. error description - indication of which records (101 for district and followed by school O.E. code for school) in the district have edit checks "on" and description of error
4. type of district - 101: received only OS/CR Form 101
   101/102: received both OS/CR and OS/CR 102 Forms
5. error type - V: valid inconsistency
   E: error.

Note: When a group of records have errors of the same type, the type code is displayed at the end of the group.

ALABAMA

OE Code	District Name--Error Description		Type of District	Error Type
1000300	BARBOUR COUNTY		101/102	
	Sch 72003	Item 22, line 17. Special education class is grades 3-6 while the school regularly offers grades K-5.		V
1001710	HALE COUNTY		101/102	
	Sch 2227	No racial breakdown on 17g.		E
1001910	JEFFERSON COUNTY		101/102	
	Sch 76002	This school is all female in enrollment.		V
1002370	MOBILE		101/102	
	Sch 72002 Sch 72006 Sch 72014	Item 191 reports gifted pupils enrolled who actually are itinerant in a gifted program held at an area school, hence no teacher reported for these three schools.		
	Sch 72016	Item 17b reports one White female suspended last year who is not in school the current year.		V

ALASKA

OE Code	District Name--Error Description		Type of District	Error Type
1100180	ANCHORAGE		101/102	
	Sch 268	Item 17b reports more Black males suspended last year than are currently enrolled.		
	Sch 76012	All the students are enrolled in other schools, they attend the Career Center on a part-time basis.		
	Sch 76018	The enrollment is all female.		V
1100485	LAKE AND PENNINSULA		101	
	101	Items 8c, and 8e have no data.		E

	Sch 1472	Non residents taking classes at this school account for discrepancies with membership data.		V
5707710	SEATTLE		101/102	
		The inclusion of "Other" racial grouping in the total column for some schools causes arithmetic errors as Seattle is not able to identify this "other" group using the prescribed racial categories. This condition is particularly apparent in items dealing with dropouts and pupils suspended on the campus reports.		
	101	8c contains some duplicated data because of the manner in which the information was collected.		
		On many schools - 13 and 14 contain the inclusion of "other" in the total but not broken-down into the proper racial grouping.		
		On most schools - 17d-h data not available since it was not part of the record maintenance in the past.		
		On certain schools - Grade levels in 22 are missing and some classes show no pupils. This is due to the computer selection of classroom to be reported. The only data available is that initially reported.		E

WYOMING

OE Code	District Name--Error Description		Type of District	Error Type
6001030	CARBON COUNTY 1		101/102	
	Sch 76005	Item 19k reports for American Indian students brought from other schools for special education here.		V
6001460	BIG HORN COUNTY 2		101/102	
	Sch 76002	Items 20g and 20j report no teachers. The students are "mainstreamed".		V
6002070	CODY		101/102	
	Sch 392	Item 12, female is zero. Only males are enrolled.		V
6003990	LINCOLN COUNTY 1		101/102	
	Sch 76001	Item 22, line 11 reports for students in grades 9-10 brought from other schools for classes here.		V
6004510	NATRONA COUNTY 1		101/102	
	101	No racial breakdown on 8b1.		
	Sch 72001	No sex breakdown on 19a.		
	Sch 72004	No data for 22d.		
	Sch 72006	17e in error.		
	Sch 72007	17e in error.		
	Sch 72008	No racial breakdown on 22d; 20d, f, g, and i lack teachers.		
	Sch 72016	22d10 and 22d11 missing grade spans.		
	Sch 72018	No data on 22d lines 1, 8, and 17.		
	Sch 72028	Indian female on 22d9, but no Indian females reported on 12.		
	Sch 76001	No data for 17b-e and 17g.		E

APPENDIX F

EDIT CHECK DIRECTORIES

The following directory specifies the edit checks made on each district or school record. For each edit check, the following information is given:

1. Edit Check Number - unique number, assigned to each edit check, which corresponds to the associated error flag position in the bit array.
2. Item Number - item number(s) from OS/CR Form 101 or OS/CR Form 102 involved in the edit check.
3. Slots Involved - slot numbers of data elements involved in edit check.
4. Description - definition of edit check. (Stated in positive form, i.e., if stated conditions are met, then there is no error).

The following terms are used in describing edit checks:

- Horizontal Check - this is a consistency check used on a row of data, which contains a total and detailed breakdown by ethnicity. The sum of the data by ethnicity must equal the total for the row.
- Blown Field - is a numeric field which contains non-numeric data. If this occurs, the non-numeric data is replaced with a numeric zero.
- Blank Field - a numeric field which was not entered. If this occurs, the blank data is replaced by a numeric zero.
- Any Column - this term follows a series of checks which require the enrollment in a program to be less than the enrollment in a larger program containing the first. For example, Asian males in special education must not exceed Asian males enrolled in the district. This check is done on each column in a given line of data. In addition, the final check labelled "ANY COLUMN" is turned "on" if any one or more of the individual column checks are "on."

APPENDIX G

THE 1976 ELEMENTARY AND SECONDARY SAMPLE SELECTION

INTRODUCTION

Under subcontract (prime Contract No. HEW-100-76-0059) to Opportunity Systems, Inc., DBS Corporation refined and extended the technique for automatic optimization of sample selection for any survey. DBS developed some primitive techniques earlier that were applied to the selection of the 1974 E&S Survey but the refinement and automation of the technique were completed during the above contract. The resulting technique was applied to the selection of the 1976 Elementary and Secondary School Civil Rights Survey in November, 1976.

There have been many questions raised regarding the outcome of this selection process; the "reasons" for selection of specific districts; and the mechanisms available to change the sample for subsequent survey projects. In this paper, we will attempt to describe the general process by which the survey was selected as well as provide some analysis of the results. The techniques have been mathematically described in earlier DBS documents and we refer the reader to them:

1. January 1976, Refinement of the Sampling Methodology Developed in Conjunction with the 1974 Elementary and Secondary School Survey - Final Report
2. March 1975, Sampling Methodology for the Fall 1974 Elementary and Secondary School Civil Rights Survey (memo from George H. Walker to Yvonne Marrow)
3. October 1974, Sampling Methodology for Fall 1974 Elementary and Secondary School Civil Rights Survey (memo from George H. Walker to Yvonne Marrow)
4. July 1974, Sampling Methodology for 1974 Survey (memo from George H. Walker to Yvonne Marrow)

1976 SURVEY DESIGN

For a variety of reasons that have been documented adequately elsewhere, the 1976 Survey is quite different from previous OCR E&S Surveys. There are two distinct survey instruments:

1. OS 101 - District Level Data
2. OS 102 - School Level Data

All districts (approximately 16,000) that are contained on the most recent OE Universe received 101 questionnaires. In addition, a sample of these 16,000 districts was selected to receive 102 forms for all schools within selected districts. Thus, the sampled districts represent a subset of the overall survey project that is equivalent - in format - to the previous OCR surveys. The decision to have districts receiving 101 forms only represents a radical departure from previous methodologies.

The purpose of the full convass has been described elsewhere but was, quite simply, to develop a baseline universe for the new OCR areas of responsibility. It is highly useful - almost critical - for OCR to develop and maintain a valid universe to permit Title IX, section 504, etc. activities to proceed.

In this paper, we will direct our attention to the selection process for the sampled districts that were required to fill out school level 102 forms as well as 101 district summary instruments. In other words, how were the 3000+ districts that fill out both 101 and 102 forms chosen.

SAMPLED DISTRICTS

The reasons to sample include reduced overall respondent burden and reduced government cost. The basic objective for the choice of the sampled districts is to allow simultaneously several different OCR needs to be satisfied within a modest number of sampled districts:

1. monitor high interest districts
2. develop state and national projections of key data elements
3. support field investigations
4. support ESAA reviews
5. support litigation
6. support policy analysis and formulation.

The sampling procedure has two different classes of inputs from OCR, viz.:

1. List of "Forced" Districts
2. List of Selection Factors

1. Forced Districts

There are many districts which must necessarily be surveyed to support OCR activities, e.g. ESAA applicants, districts undergoing review, districts that are in litigation, etc. For 1976, OCR developed a list of school districts that is input to the computer selection system as forced or must be included. The statistical programs will automatically include these districts and adjust the selection weights on the other districts to take fullest possible advantage of the surveyed districts. In particular, the list of forced districts included all districts in the nation that are:

1. court ordered
2. voluntary plan
3. litigation
4. ESAA applicants
5. other OCR explicit activity, e.g. under review.

This list was generated and supplied by OCR and input to the computerized system.

2. Selection Factors

In addition to the explicitly forced districts, a set of characteris-

tics was specified to allow enriched sampling. This resulted in high coverage of districts having concentrations of parameters of interest to OCR. This set of factors was developed by reviewing the availability of data and the present and anticipated OCR responsibilities.

It is clear that selection can only be enriched to include districts for which data already exists. Thus, the selection of districts in 1976 was somewhat weighted towards districts surveyed previously by OCR; however, previous surveys have focused on districts of high likelihood or concentration of OCR relevant factors. The 1976 Survey of all districts (the 16,000) will generate a data source from which future OCR surveys can be drawn.

The set of selection factors that was used is as follows:

1. American Indian pupils
2. Black pupils
3. Asian American pupils
4. Spanish-Surnamed American pupils
5. Total enrollment
6. Desegregation Index segregated pupils
7. Excess of Spanish-Surnamed American pupils over pupils in bilingual education
8. Graduation requirements different by sex
9. Excess minority pupil suspension
10. Excess minority pupils in special education
11. State representative projection (based on enrollment)

We will discuss the data sources later, but an explanatory note is appropriate here. The data source on which to exercise the selection factors differs depending on the factor. There are several different data files, each with information on <u>some</u> of the selection factors. It was only by use of all sources together that the complex set of selection factors could be satisfied.

SAMPLING OVERVIEW

The process by which the sampled districts were chosen is multistage, but basically straightforward - in the overall sense. The three stages are:

1. Collection of input data, forced districts, selection factors, cost function
2. Development of sampling probabilities
3. Selection of districts based on weights developed in 2 above.

The primary concept of a sample is the probability of selection. If we can associate a probability of selection with every district in our universe, then the selection process is simple. A random number generator is used to "throw the dice" and determine which districts are "sampled" and which are not.

Let us consider an example. Suppose we have a universe of 10 districts, each with a probability of 0.20. For each district, we draw a random number between 0.0 and 1.0; if the random number is less than or equal to 0.20, we have selected the district. If the random number is greater than 0.20, then we have not selected the district. In the table below, we simulate the process:

EXAMPLE 1

	District	Selection Probability	Random Number
	1	.20	.40
*	2	.20	.10
	3	.20	.94
*	4	.20	.17
	5	.20	.99
	6	.20	.73
	7	.20	.40

EXAMPLE 1 (continued)

District	Selection Probability	Random Number
8	.20	.72
9	.20	.82
10	.20	.26

In Example 1, we have - by statistical chance, selected District 2 and District 4. In this example, two out of ten was the expected number (i.e. .2 X 10 = 2) but it was not necessarily the case that two would be chosen. In Example 2 below, we have used another set of random numbers with quite different results.

EXAMPLE 2

District	Selection Probability	Random Number
1	.20	.39
2	.20	.96
3	.20	.33
4	.20	.60
* 5	.20	.10
* 6	.20	.18
7	.20	.82
* 8	.20	.19
9	.20	.53
10	.20	.44

In Example 2, we have selected three different districts by "chance" (District 5, 6, and 8).

In order to project the universe totals, we simply take the inverse of the selection probability, i.e. 1 + selection probability, to get the statistical weight. In our two examples above, the weight is 1 + .2 or 5. This makes

sense. Each district had a probability of .20 or 1 out of 5 to be drawn. Hence, any selected district represents 5 districts. To obtain the projected universe total, we multiply the weight times the quantity of interest.

Let us augment example 1 with enrollment figures.

EXAMPLE 1A

District	Selection Probability	Random Number	Enrollment
1	.20	.40	350
* 2	.20	.10	450
3	.20	.94	150
* 4	.20	.17	200
5	.20	.99	1000
6	.20	.73	300
7	.20	.40	50
8	.20	.72	400
9	.20	.82	275
10	.20	.26	350

Now, we know this example drew the expected number of districts but there was statistical good luck. The actual total enrollment is 3525. The projected total enrollment is

$$5 \times 450 + 5 \times 200 = 2250 + 1000 = \underline{3250}$$

Thus, our sample survey predicted 3250 pupils based on two points. For this example, we want conceptual clarity not statistical accuracy.

There is a refinement. The selection probabilities do not have to be all the same value. In fact, there are many circumstances in which you want them to tend higher for districts of interest, and lower for districts of less interest. Furthermore, these selection probabilities can even be general

functions of the characteristics of the districts, in such a way that every district has a different probability. All of the theory goes forward the same as the simple cases above. The weights are still 1 + probability, and the projection is still the sum of the weights times the projected quantity.

Let us construct another example, with probability related to enrollment:

Enrollment	Probability
0 - 200	0.10
201 - 400	0.20
401 -	0.40

EXAMPLE 3

	District	Selection Probability	Random Number	Enrollment
	1	0.20	.40	350
*	2	0.40	.10	450
	3	0.10	.94	150
*	4	0.20	.17	225
	5	0.40	.99	1000
	6	0.20	.73	300
	7	0.10	.40	50
	8	0.20	.72	400
	9	0.20	.82	275
	10	0.20	.26	350

In this case, the projected enrollment is

$$(1 + .40) \times 450 + (1 + .20) \times 225$$

$$= 2.5 \times 450 + 5 \times 225$$

$$= 1125 + 1125$$

$$= \underline{2250}$$

PROBABILITY DEVELOPMENT

In the preceeding section, we saw that the sampling probability could be determined by the enrollment in a district. The question arises: can we so choose the probabilities that we get the best possible survey with only a relatively few districts? A second question immediately arises: what are the evaluation measures to determine "best" or even a direction of improvement? The mechanism which has been used to answer these questions is the following. Use overall survey cost as an objective to minimize with coverages of interest groups as constraints. In other words, the best survey is that survey which satisfies all of the coverage requirements while minimizing total cost.[1/]

When dealing with sampling and probabilities, one cannot directly constrain or restrict the outcome of any single sample. Statistics only provide control over the average results of a large number of samples. The average value of a parameter that would be obtained if a large number of samples were drawn is known as the expected value. In the case of our examples above with 10 districts, each with probability 0.20, the expected number drawn is 2.0 although any number from 0 to 10 might actually be selected. Statistics provides some measure of likelihood of deviations in an arbitrary draw from the expected number and this represents statistical control. In other words, a sample can be predicted and controlled only statistically and through likelihoods not certainty of individual outcomes.

The system used to develop the 1976 Survey recognizes this characteristic and focuses its optimization techniques upon the selection probabilities not the districts actually drawn. Thus, the questions formulated above are restated - in statistical terms - as close a set of probabilities (one for each district) such that the expected cost is a minimum and the expected coverage of the selection factors meets certain constraint levels. To control the deviation

---

[1/] For a discussion of the process by which survey costs can be analytically formulated, see the Final Report from Phase I, Task II prepared under Contract Number HEW-100-76-0059, January, 1976.

of actual outcomes from expected values for the system also constrains the standard deviations. The standard deviation measures likelihood of any single actual outcome from being largely different than expected values.

In more technical terms, the above discussion becomes:

The objective is to choose the draw probabilities (for each district) in such a manner as to minimize the expected cost of the sample, while at the same time, ensuring that constraints on the minimum (acceptable) expected coverage and maximum (acceptable) expected projection variance for the attributes of interest are maintained.

For convenience, the constraints are expressed in percentage form, i.e.,

(1) the coverage constraint express the minimum acceptable percent of the universe total for the corresponding attribute in expected value

(2) the projection variance constraints express the maximum acceptable expected standard deviation of a universe projection of an attribute as a percent of the universe total.

For example, the constraint or restriction on state-by-state projectability becomes a requirement that the expected standard deviation not exceed 10% of the universe enrollment in the state. In Alabama, a universe of 800,000 pupils therefore implies a constraint (10%) on the standard deviation of 80,000 pupils. (It is important to remember how these constraints are represented in order to interpret the tables shown later.)

There is one last constraint: we imposed a minimum draw probability of 0.025 on every district. This provided some chance that any arbitrary district would be sampled.

TABLE 1

PERCENT CONSTRAINTS FOR SELECTION FACTORS

	SELECTION FACTOR	UNIVERSE TOTAL	PERCENT CONSTRAINT
1.	American Indian Coverage	189109	75% (141832)

*PSD = Percent Standard Deviation

OUTPUT FROM PROBABILITY SELECTION

The optimal sample selection program was run and developed a set of probabilities with an expected number of samples drawn of 2,894 districts. The particular set of coverage and standard deviation constraints that were used in this process are shown in Table 1.

The probability selection program was run - using data sources described below - and the constraints of Table 1, to develop a set of probabilities. In Table 2, we show the results of that draw. The expected number of districts drawn from this particular set of probabilities is 2894. The actual number drawn is - of course - subject to chance fluctuation.

In order to read Table 2, it is necessary to understand the column headed "LAMBDA". This column shows the marginal cost of adding one more unit of the corresponding selection factor. A high LAMBDA represents a selection factor which has been relatively difficult to cover in the survey. A zero LAMBDA represents a slack variable, i.e., the other requirements of the selection factors were sufficient to bring the minimum required coverage - in the expected value sense. The column headed "PERCENT" shows the percent of the universe total the expected coverage represents. If the constraints were all met, then (1) all coverage PERCENT should be at least as large as the TARGET %, and (2) all percent standard deivations (PSD) should be no larger than the TARGET %.

Looking at Table 2, we see a universe total of 189,109 American Indians. The E 06 represents the computer's way of counting decimal places, i.e. 0.189109E06 = 189109. The expected coverage of American Indians for this set of probabilities is 141,832 which represents 75% of the universe total. Therefore, we have hit the constraint directly. The LAMBDA or marginal cost is 201.15 which is relatively very high. In fact, only Asian American coverage and Spanish-Surnamed American coverage had higher marginal costs. This high marginal cost means that a lower constraint target percent on American Indians would have reduced the expected number of districts to be sampled. It is important to realize, however, that this marginal cost is not constant over all constraints and will vary as the constraints vary. For example, a target % of 50% for American Indians may have dropped the marginal cost to 125.00.

The expected standard deviation for American Indians is 5538.56 which represents 2.93% of the actual universe total of 189109 American Indian students. Since this is slightly less than the target of 3%, we anticipate - and find - a low marginal cost of .333725.

Expected Black coverage is completely slack in that Black students are highly correlated with other selection factors and the constraint was over met due to other factors. The expected Black PSD is 138,902 students which represents 2.06% of the universe total of 6,752,930 Black students. Even though the variable Black Enrollment is completely slack, there is still a statistical uncertainty to the outcome of a draw. In this case, it corresponds to a PSD of 2.06%. The LAMBDA or marginal cost of Black coverage and Black PSD is zero which means there was no cost to the sample in meeting these constraints.

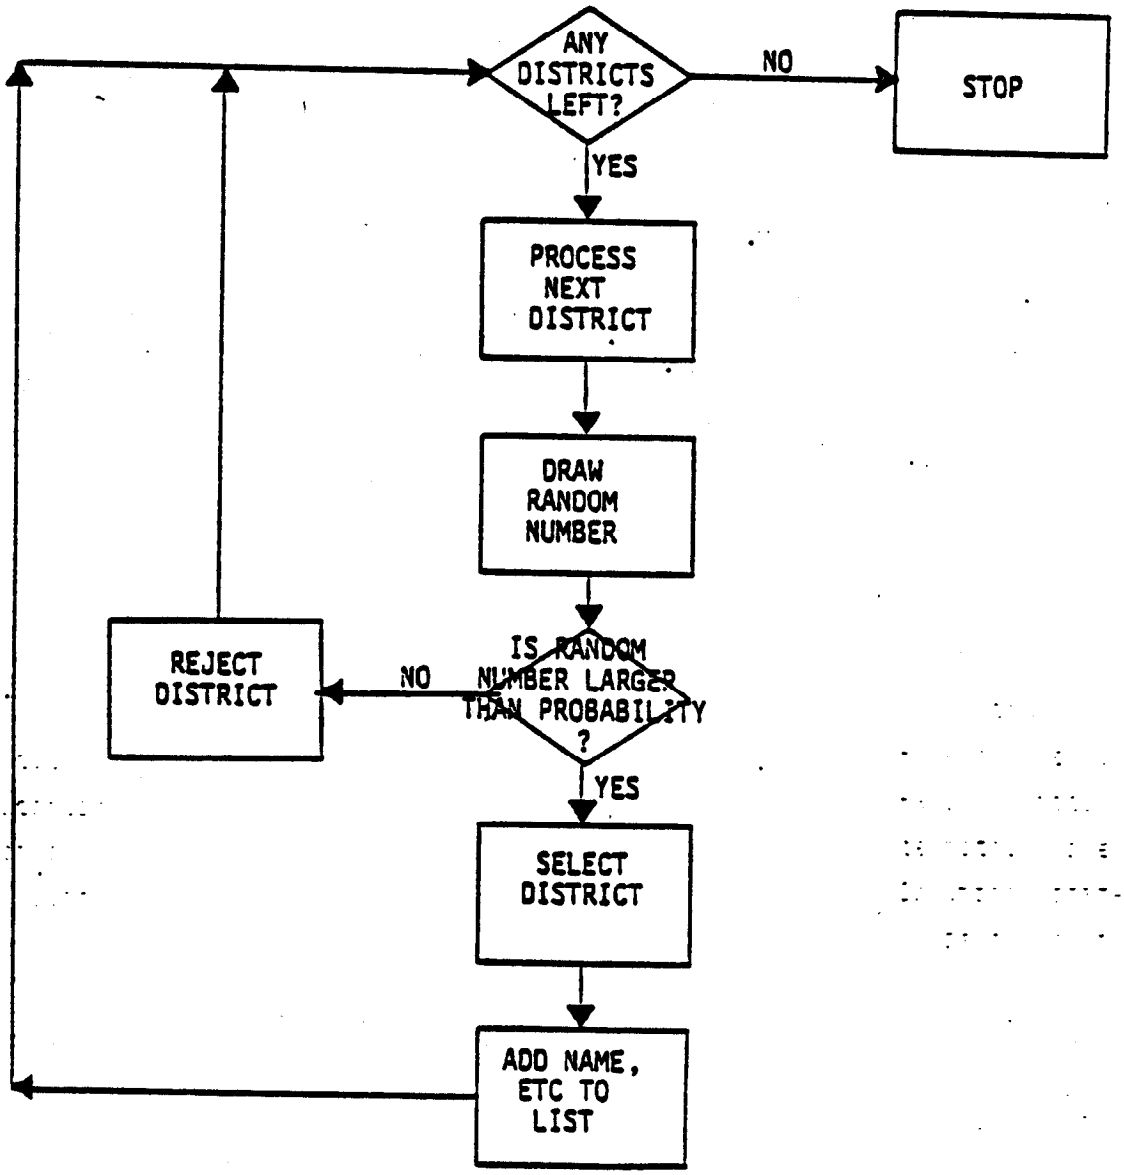
What really happens is the following. There are other constraints which - in order to be satisfied - caused a large (expected) Black enrollment to be sampled. There is a considerable interdependence of these many constraints and it is difficult to state simply which constraint may be relaxed with what gain. The easiest way to address such questions is by rerunning the program and looking at the results.

There are other subtleties to the probability development. The manner in which the data was collected to draw the survey will be explained elsewhere. However, let us point out here that there was no ethnic data for one state, Hawaii (state 12). Furthermore, Hawaii was a forced district and no standard deviation is expected because there is only one district. The District of Columbia (state 9) has only one district, so its expected standard deviation is zero and it was slack.

OUTPUT FROM SAMPLE SELECTION

In the preceeding section, we described the process by which the optimal

set of probabilities was selected. The next step in the overall flow of activities was the selection of a particular set of actually sampled districts. The process is the same as that shown in the examples, i.e. a random number is selected and compared to the probability of selection for a district. If the random number exceeds the probability, then the district is rejected. We show the process schematically below. It is quite simple and results in a list of selected districts.



In addition to the list of selected districts, the program produces the actual sample totals, the projected totals, and the projected percent standard deviation. Here, the projected totals are based on the "old" data from earlier surveys. The 1976 projections clearly await the results of the 1976 data.

The particular run that was done resulted in the selected of 3007 districts to be surveyed. Remember the expected number was 2894. Therefore, the actual total of 3007 is 113 larger or 3.90%. That is how statistical fluctuations cause actuals to differ from expected values. Furthermore, although the expected value is the average outcome, it itself is not very likely as an outcome in comparison to all other values taken together.

In Table 3, we show the outcome of the sample draw of 3007 districts. The number of American Indian students enrolled in the selected districts in the data base used for the sample (OCR 1974) was 141,580. This represents 74.87% of the 189,109 American Indians in the full set of districts in the data base. Using the assigned probabilities to project the American Indian total based on past data, we find 185,602. This represents 98.15% of actuals; it also represents a percent standard deviation of 2.38%. Thus, in the case of this parameter (American Indian students) the outcome seems quite close to the constraint requirements of 75% and 3%.

It is interesting to note that state 9 (District of Columbia) which had zero projected standard deviation, had 100% coverage with zero projected standard deviation.

The projected percent standard deviation (PSD from above) for states was constrained to an expected value of 10%. The actuals cluster around that value but are both above and below. There were 29 over 10.0% and 22 below 10.0%. In fact, state 29, Nevada, ended up with a projected enrollment standard deviation of 25.86%, quite a wide variation from expected. As it develops, Nevada has very few districts and the "small number" effect made such an outcome not unlikely. State 34, North Carolina, varied the other way and ended

TABLE 3
OUTCOME OF SAMPLE SELECTION

up with a standard deviation of 4.53%. It is important to realize that such statistical outcomes that are quite different from expected values are not problems, but natural consequences of sampling. If we had constrained to smaller expected standard deviations, then the distribution of outcomes would have probably been closer to expected but not definitely.

DATA SOURCES

In order to use the sample selection program described above, it is clearly necessary to have as much universe data - in advance - as is possible. However, it is also clear that complete advance knowledge isn't possible - or else there would be no need for the survey. The compromise is to use whatever data is available, perhaps from several different sources.

There were several serious problems that the selection of the 1976 survey faced, many of which will be solved by the outcome of the 1976 survey. There is no data source that has racial/ethnic data for all (or even most) school districts in the country. Furthermore, there is no data source that permits most of the selection factors to be evaluated. The primary source of racial/ethnic data - both enrollment and program participation - is the previous OCR surveys. The primary source of a complete enumeration of school districts - by state and enrollment - is the OE universe.

What was done was the following: Take the OE universe as the starting point to build a file of approximately 16,000 school districts. Then merge selected racial/ethnic data directed towards the selection factors from the 1974, 1973, and 1972 OCR files. The merge rule was use the 7 digit OE identification code as primary key, and take the latest data available. This means for a district surveyed by OCR in 1972, 1973, and 1974, the 1974 data will be merged for racial/ethnic enrollment. If a district was surveyed in 1972 only, then take the 1972 data.

There are further refinements. Some of the data elements were not collected in all three years of the OCR survey; hence, the set of districts containing

the full collection of data needed is considerably less than the full universe. For those data fields or data records without any data for a given selection factor, the value zero is entered. In other words, a district not surveyed is viewed as a district without the target population.

It is now clear why it was so important for OCR to develop a full and accurate universe of relevant data. Future sample surveys can be drawn from the 1976 OCR universe with great statistical confidence and validity. The fortunate circumstance for 1976 was the following. The minority student population has been well surveyed and identified by the previous OCR surveys; hence, despite missing the data for most districts, a sensible sample could be developed.

We can now understand the columns in Tables 2 and 3 labelled "TOTAL" and "UNIVERSE TOTAL". They represent the total surveyed in whatever survey the corresponding data was collected. Thus, the Black universe total of 6.75 million is really the Black total in the complex of districts surveyed in 1972, 1973, and 1974. Although close to 8,000 districts were not covered, we know they contained fewer than 10% of the nation's Black enrollment.

In summary, the data was taken from four different sources and merged together to generate a data base for selection. It is anticipated that the 1976 OCR survey will provide a highly valuable basis from which subsequent surveys can be drawn. It is through such mechanisms that OCR intends to fulfill their responsibilities and legislative mandate.

POST SCRIPT

After the 3007 districts were selected, a new set of districts had to be surveyed and identified. This effectively represented an addition to the list of forced districts. They were added to the selected districts - with appropriate reweighting and renormalization - and the survey project proceeded.

Appendix H

The following is the derivation of the variance expression for weighted sampling.

DERIVATION OF VARIANCE EXPRESSION FOR WEIGHTED SAMPLING

Let P_i be the probability that the ith element of the universe is included in the sample. Let X_i be an attribute of the ith element for which a universe projection is desired. Thus we wish to estimate ΣX_i on the basis of our sample.

Consider the Random Variable Y_i defined as:

Y_i = 0 if ith element not included in Sample
X_i/P_i if ith element <u>is</u> included

(Thus Y_i is non-zero only on the selected sample, and has there the familiar form of the observation value times a correcting weight -- which is the inverse of the draw probability.)

Note that all of the random variables Y_i are <u>independent</u>, since in this procedure the decision to include any element is independently made with probability P_i.

As a preliminary step, we first calculate the expected value of Y_i and Y_i^2 directly from the definition:

$$\langle Y_i \rangle = P_i \cdot \left(\frac{X_i}{P_i}\right) + (1 - P_i) \cdot 0 = X_i$$

$$\langle Y_i^2 \rangle = P_i \cdot \left(\frac{X_i}{P_i}\right)^2 + (1 - P_i) \cdot 0 = X_i^2/P_i$$

Let us now turn to our universe projection estimator, $\Sigma_i Y_i$. Its expected value is:

$$\left\langle \Sigma_i Y_i \right\rangle = \Sigma_i \langle Y_i \rangle = \Sigma_i X_i$$

And we see that its expected value is equal to the sum of X_i, the quantity we wish to estimate, so that it is an <u>unbiased</u> estimator.

We now calculate its variance, directly from the definition.

$$\sigma^2 = \langle(\Sigma Y_i)^2\rangle - \langle \Sigma Y_i \rangle 2$$

$$= \langle \Sigma_{ij} Y_i Y_j \rangle - (\Sigma \langle Y_i \rangle)^2$$

$$= \langle \Sigma'_{ij} Y_i Y_j + \Sigma_i Y_i^2 \rangle - \Sigma_{ij} \langle Y_i \rangle \langle Y_j \rangle$$

where Σ' stands for all combinations of i, j such that $i \neq j$.

Continuing:

$$\sigma^2 = \Sigma'_{ij} \langle Y_i Y_j \rangle + \Sigma_j \langle Y_i^2 \rangle - \Sigma_{ij} \langle Y_i \rangle \langle Y_j \rangle$$

But $\langle Y_i Y_j \rangle = \langle Y_i \rangle \langle Y_j \rangle$ for $i \neq j$ (independence), so

$$\sigma^2 = \Sigma'_{ij} \langle Y_i \rangle \langle Y_j \rangle + \Sigma_i \langle Y_i^2 \rangle - \Sigma_{ij} \langle Y_i \rangle \langle Y_j \rangle$$

substituting the previously computed values for $\langle Y_i \rangle$ and $\langle Y_i^2 \rangle$ gives:

$$\sigma^2 = \Sigma'_{ij} X_i X_j + \Sigma_i \frac{X_i^2}{p_i} - \Sigma_{ij} X_i X_j$$

Rearranging the last term:

$$\sigma^2 = \Sigma'_{ij} X_i X_j + \Sigma_i \frac{X_i^2}{p_i} - \Sigma'_{ij} X_i X_j - \Sigma_i X_i^2$$

$$= \Sigma_i \frac{X_i^2}{p_i} - \Sigma_i X_i^2$$

$$\sigma^2 = \Sigma_i X_i^2 \left(\frac{1}{p_i} - 1\right)$$

and the variance calculation is completed.

To estimate the variance on the basis of the sample only, note that we wish an estimate of the universe total $\Sigma X_i^2(\frac{1}{p_i}-1)$. As usual, an unbiased estimate of this quantity is obtained by summing this quantity multiplied by $1/P_i$ over the sample, hence:

$$\sigma^2_{\text{estimate}} = \sum_s \frac{1}{p_i}\left[(X_i^2\left(\frac{1}{p_i}-1\right)\right], \text{ where s is all sampled districts}$$

but $\frac{1}{p_i} = w_i$ (sampling weight),

hence $\sigma^2 = \sum_s X_i^2 w_i(w_i-1)$.
