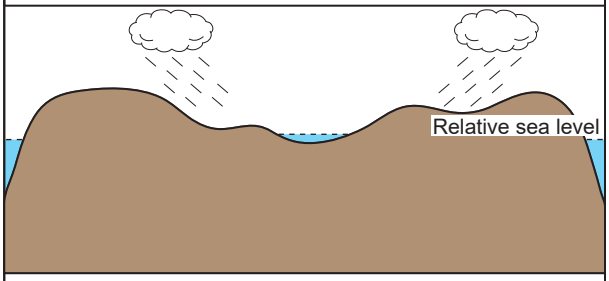
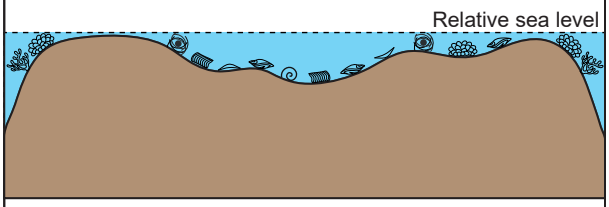
Subaerial Exposure



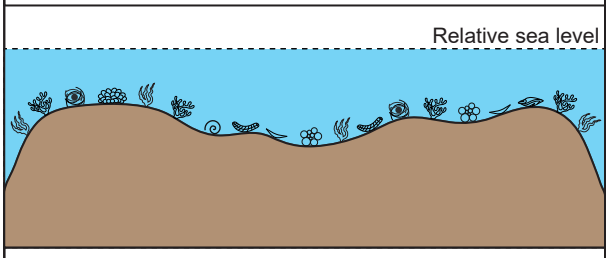
Processes: Subaerial exposure, erosion, karstification.

Restricted Bank to Lagoon



Biota: Fragmented coral (domal, large-diameter branching), large benthic foraminifera, rhodolith, red algae, mollusc.
Textures: Rudstone, grainstone, packstone.

Open Bank



Biota: Corals in growth position (small-diameter branching, platy), green algae, rhodolith, red algae, mollusc, small benthic foraminifera, large benthic foraminifera.
Textures: Floatstone, wackestone, packstone.

Domal coral
Branching coral
Platy coral
Green algae
Rhodolith
Red algae
Large benthic foraminifera
Small benthic foraminifera
Bivalve
Gastropod
