Tanaman Pisang merupakan tanaman yang berbuah sepanjang tahun dan tidak mengenal musim. Hal ini dapat dilihat dari pola banyaknya tanaman yang menghasilkan untuk masing-masing triwulan yang relatif konstan dan paling sedikit terjadi pada triwulan III (Juli-September).

The plants giving the biggest contribution of fruit production is banana. Production of banana in 2007 was 5.45 millions tons which most of them were in Jawa island with contribution of 56.52 percent or 3.08 millions tons. Distribution by province shows that Jawa Barat produced about 1.45 millions tons banana, followed by Jawa Timur about 793 thousands tons and Jawa Tengah about 647 thousands tons. Compared to 2006, production of Banana in 2007 increased about 8.27 percent.

Banana is one of the annual plants which can be harvested in the whole year and it do not depend on the season. It is shown that the number of harvested plant are relatively constant for every quarter and it is smallest in the third quarter (July-September).

Tangerine is the second largest contribution for production plants which produced about 2.55 millions tons in 2007. Distribution by island shows that the most tangerine production is in Sumatera island which contributed about 1.23 millions tons (48.05 percent). Sumatera Utara is the biggest tangerine producer which production reached 962 thousands tons, than followed by Jawa Timur with production about 579 millions tons and Kalimantan Barat as the third province which produced about 171 thousands tons. The production of Tangerine in 2007 increased about 2.89 percent compared to production in 2006.

Similar to banana, tangerine is annual plants which can be harvested in the whole year. The number of harvested plant is relatively constant for every quarter with the biggest of harvested plant in the second quarter (April-June).
