FOREWORD

This is the 7th edition of the statistical report entitled ***Major Crops Statistics of the Philippines***. It presents the 2007 to 2011 annual data on volume of production, area planted/harvested and number of trees/hills of 21 major crops under the following commodity groupings: Cereals, Fruit Crops, Non-Food and Industrial Crops and Vegetables and Root Crops. The data are disaggregated down to the provincial level. The 21 major crops are those highlighted in the Report on the Performance of Agriculture which is released quarterly by the Bureau of Agricultural Statistics (BAS).

In response to the needs of our data users, the report presents statistics on banana, mango, coffee and tobacco by variety.

This report was prepared by the Crops Statistics Division (CSD) of the BAS. It is intended to serve as ready reference for our various clients and stakeholders in the agriculture sector.

The BAS would appreciate comments and suggestions from our data users and readers for further improvement of this report.

ROMEO S. RECIDE

EXPLANATORY NOTES

I. Crops Covered

This statistical report covers the following major crops:

COMMON NAME	SCIENTIFIC NAME	ENGLISH NAME
Palay	*Oryza Sativa Linn*	Palay/Paddy
Mais	*Zea mays L.*	Corn/Maize
Niyog	*Cocos nucifera L.*	Coconut
Tubo	*Saccharun officinarum L.*	Sugarcane
Saging	*Musa sapientum var.*	Banana
Pinya	*Ananas comosus L.*	Pineapple
Kape	*Coffea sp.*	Coffee
Mangga	*Mangifer indica L.*	Mango
Tabako	*Nicotiana tabacum*	Tobacco
Abaka	*Musa textiles Nee*	Abaca
Mani	*Archis hypogea Linn.*	Peanut
Mongo	*Vigna radiata L.*	Mungbean
Kamoteng kahoy	*Manihot esculenta Crantz.*	Cassava
Kamoteng kahoy	*Ipomoea batatas Lam*	Sweet Potato
Kamatis	*Lycopersicon esculentum Mill.*	Tomato
Bawang	*Allium sativum Linn.*	Garlic
Sibuyas	*Allium cepa Linn.*	Onion bulb
Repolyo	*Brassica oleracea L. (Capitata grp)*	Cabbage
Talong	*Solanum melongena Linn.*	Eggplant
Kalamnsi	*Citrus madurensis Lour.*	Calamansi
Raber	*Hevea brasilliensis Mull. Ara*	Rubber

II. Sampling Methodology

A. CEREALS

The sampling design of the Palay and Corn Production Survey (PCPS) uses the results of the 1991 Census of Agriculture and Fisheries (CAF) as sampling frame. The survey domain is the province. It employs a replicated two-stage stratified sampling design. The barangay as the primary sampling unit (psu) is selected using a probability proportional to size (*pps*) scheme. The farming household which serves as the secondary sampling unit (ssu) is selected systematically.

1. First Stage (Primary) Sampling Unit Selection

a. For Major Palay/Corn Provinces

The primary sampling units are divided into strata of approximately equal sizes relative to the total farm area devoted to palay/corn. The largest barangays in each municipality are lumped into one stratum (generally, the 10^{th} stratum). The remaining barangays are then divided into 9 strata such that the aggregate palay/corn farm area of all the barangays constituting any one stratum is approximately the same as that of the other strata.

Using the area devoted to palay/corn as a measure of size of the barangay, a pps sample of four (4) independent barangays is selected from each stratum. Each sample barangay represents a replicate sample for that stratum.

b. For Other Provinces

The primary sampling units are divided into 5 strata with the largest barangays constituting the 5th stratum. A pps sample of two (2) independent barangays is selected from each stratum.

2. Second Stage (Secondary) Sampling Unit Selection

Households in each sample barangay are classified into farming and non-farming. For the PCPS, the selection of sample households is limited only to the group categorized as farming households. From the list of farming households and using a random start and a sampling interval, the sample households are drawn systematically.

B. OTHER CROPS

For crops other than palay and corn, basic production statistics are generated thru the Crops Production survey which is based on non-probability sampling. That is, there is no frame where samples are selected. The domain of the survey is the province. The primary data sources are stratified into *small farms* and *large farms/plantations*. For large farms/plantations, a maximum of five (5) plantations are randomly chosen to represent the whole province. The cut-off size of large farms/plantations in hectares varies by crop and by major island grouping, Luzon, Visayas and Mindanao. For *small farms*, crops statistics generation employs two-stage sampling design. That is, for each crop the top

five (5) producing municipalities in a province serve as the primary sampling units (psu). Five producing farmers from each municipality are chosen as the ultimate sampling units (usu). Under this approach, it is possible that a farmer may be drawn as a sample for more than one crop which he plants and harvests.

B1. Data on Other Crops with Specialized Commodity Agencies

Area and production data for sugarcane and abaca include estimates generated from the BAS surveys and reports from specialized commodity agencies. For sugarcane, BAS covers cane that are used for chewing and production of panocha/muscovado and vinegar, while the Sugar Regulatory Administration (SRA) is the source of data in cane that are milled for centrifugal sugar. Abaca fiber that passes through baling stations is reported by the Fiber Industry Development Authority (FIDA), while the BAS collects data on unbaled fiber. Data on area and production of coconut are the results of the Quarterly Coconut Production Survey (QCPS), a joint undertaking between the BAS and Philippine Coconut Authority (PCA).

The SRA releases monthly preliminary data, while FIDA releases data on a quarterly basis. These data are finalized only in the succeeding year. The BAS, on the other hand, allows revision of the quarterly data it collects in the succeeding quarter. As a result of this difference in the time lag in releasing the final estimates for crops with specialized commodity agencies, the latest annual data, e.g. 2005, are considered preliminary.

III. Definition of Terms

The actual physical area planted to a particular crop. In crop statistics, this generally applies to area reported for permanent crops.

Area Harvested	*The actual area from which harvests are realized. This excludes crop are which were totally damaged. It may be smaller than area planted. In crop statistics, this applies to temporary crops.*
Area Planted	*The actual physical area planted. This generally applies to area reported for permanent crops and multi-harvest temporary crops.*
Bearing Trees/Bearing Hills/ Bearing Vines	*The number of trees/hills/vines where harvesting has been made in the past but*

	may or may not have borne fruits or productive during the reference period due to cyclical production pattern of the crop. Hills applies to banana. Vines applies to pepper and grapes.
Crop Production	*Is the quantity produced and actually harvested for a particular crop during the reference period. It includes those harvested but damaged, stolen, given away, consumed, given as harvester's share, reserved etc. Excluded are those produced but not harvested due to low price, lack of demand and force majeure or fortuitous events, etc.*
Major Crops	*Refer to the top 19 crops in the Philippines, other than palay and corn which collectively account for more than 60 percent of the total crop production. These include coconut, sugarcane, banana, pineapple, coffee, mango, tobacco, abaca, peanut, mongo, cassava, sweet potato, tomato, garlic, onion, cabbage, eggplant, calamansi and rubber.*
Permanent/Perennial Crops	*Are crops which occupy the land for a long period of time and do not need to be replaced after each harvest such as fruit trees, shrubs, nuts, etc. These crops may be productive or fruit-bearing crops. Examples are: avocado, coffee, coconut and other fruit trees.*
Temporary Crops	*Crops which are grown seasonally and which growing cycle less than one year and which must be sown and planted again for production after each harvest.*

Note: A blank space in the data tables means that no harvest was made for the crop in the province.

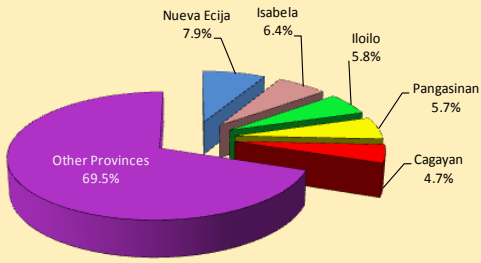
HIGHLIGHTS (CEREALS)

PALAY

Production of palay in the country grew from 16.24 million mt in 2007 to 16.68 million mt in 2011. It posted an average annual growth of 0.68 percent over the last five (5) years. The 2011 production was 5.8 percent higher than the previous year's output of 15.77 million mt. Area harvested expanded from 4.35 million hectares in 2010 to 4.54 million hectares in 2011 or by 4.2 percent.

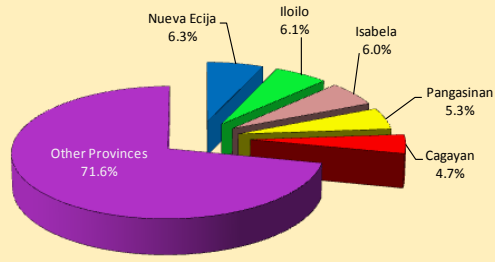
The country's top five (5) palay producing provinces were Nueva Ecija, Isabela, Iloilo, Pangasinan, and Cagayan with a combined output of 5.08 million mt accounting for 30.5 percent of the national total palay output in 2011 (Figure 1). The total area harvested from these provinces was 1.29 million hectares, or 28.4 percent of the national total (Figure 2).

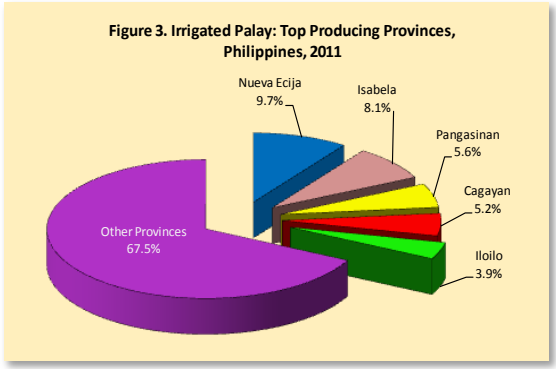
Figure 1. Palay: Top Producing Provinces, Philippines, 2011



Production from irrigated palay farms was 12.36 million mt. The top producers were Nueva Ecija, Isabela, Pangasinan, Cagayan, and Iloilo with a combined output of 4.01 million mt, equivalent to 32.5 percent of the country's irrigated palay production (Figure 3).

Figure 2. Palay: Area Harvested by Province, Philippines, 2011





In rainfed areas, total palay production was 4.33 million mt. Iloilo posted the biggest contribution at 475.02 thousand mt or 11.0 percent. The provinces of Pangasinan, Capiz, Maguindanao, and Leyte posted production share of 3.6 percent to 6.2 percent (Figure 4).

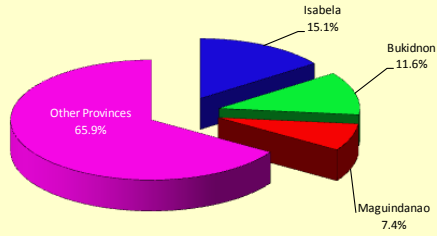
CORN

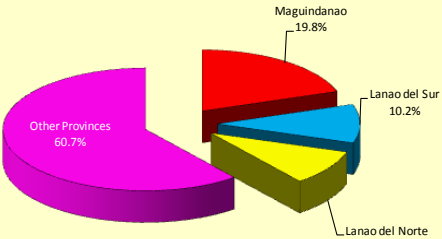
From 6.74 million mt in 2007, corn production increased to 6.97 million mt in 2011. Average annual growth was 0.86 percent. The 2011 production was 9.32 percent more than the 2010 output of 6.38 million mt. The increase was attributed to the 1.8 percent expansion in area harvested. The country's top corn producer was Isabela which shared 15.1 percent of the national corn output (Figure 5). This was followed by Bukidnon and Maguindanao with 11.6 percent and 7.4 percent shares, respectively.

Figure 5. Corn: Top Producing Provinces, Philippines, 2011

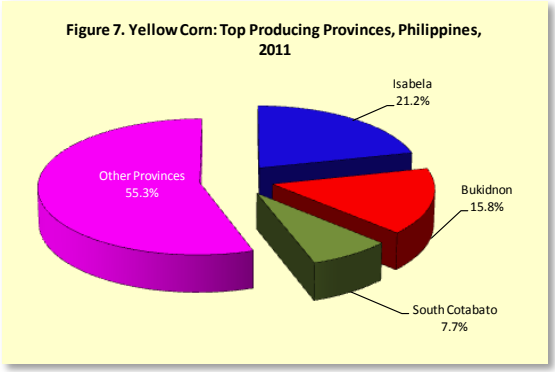


White corn production was highest in Maguindanao. It had 426 thousand mt of output and contributed 19.8 percent to the national output in 2011. Lanao del Sur and Lanao del Norte followed with 10.2 percent and 9.3 percent shares, respectively (Figure 6). Area harvested in Maguindanao was 148.8 thousand hectares, the largest among all the provinces in the Philippines (Table 21).

Figure 6. White Corn: Top Producing Provinces, Philippines, 2011



Isabela was the country's top producing province for yellow corn at 1.02 million mt or 21.2 percent of the nation's total output. Bukidnon and South Cotabato were



next with 15.8 percent and 7.7 percent shares, respectively (Figure 7). Area harvested from these provinces accounted for 42.1 percent of the national total of 1.26 million hectares.

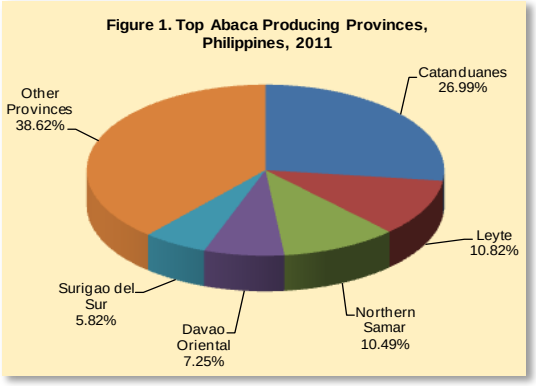
HIGHLIGHTS (NON-FOOD & INDUSTRIAL CROPS)

ABACA

Over the five (5) year period 2007-2011, area and production of abaca fluctuated. Increases were noted from 2007 to 2008 but decreased in 2009 (Table 26 & 27). In 2011, production reached 68.61 thousand mt which was 3.16 percent more than the 2010 level of 66.51 thousand mt. Favorable weather conditions enhanced harvesting and stripping of abaca fibers in Catanduanes. The availability of spindle machines extended by private companies in Zamboanga Sibugay and the high demand and satisfactory price of abaca fibers induced harvesting of abaca. The expansion program of Fiber Industry Development Authority (FIDA) and Local Government Units (LGUs) for abaca in Aklan also contributed to the increase in production. The program included provision of planting materials and techno-guide training on the extraction and weaving of abaca fibers.



Catanduanes remained as the top producer with output of 18.52 thousand mt or a share of 27 percent in total abaca production in 2011. This was followed by Leyte with 7.43 thousand mt or 10.82 percent; Northern Samar, 7.20 thousand mt or 10.49 percent; Davao Oriental, 4.98 thousand mt or 7.25 percent; and Surigao del Sur, 4.00 thousand mt or 5.82 percent (Figure 1).

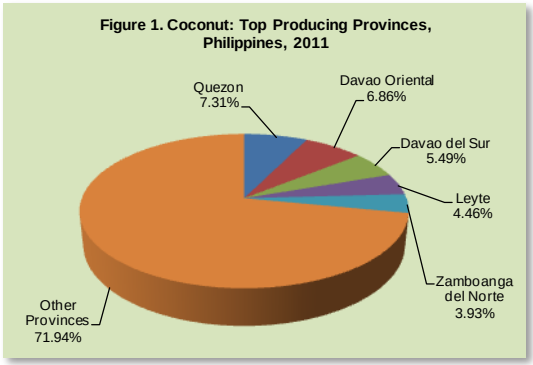
COCONUT

During the period 2007-2011, coconut production went up by an annual average of 0.65 percent (Table 30). Area planted and number of bearing trees increased annually by 1.47 and 0.10 percent, respectively (Table 31 & 32).

In 2011, production at 15.24 million mt was 1.71 percent lower than the 2010 record of 15.51 million mt. Decreases in output were attributed to the effects of dry spell in 2009 that affected the major coconut producing provinces. The incidence of pests such as scale insects or *aspidiotus destructor* in the municipalities of Calaca and Lemery in Batangas and brontispa longissima in some parts of Curuan District in Zamboanga City also contributed to the decline in production.



The major coconut producers and their shares in the country's coconut output in 2011 were as follows: Quezon, 1.11 million mt or 7.31 percent; Davao Oriental, 1.05 million mt or 6.86 percent; Davao del Sur, 0.84 million mt or 5.49 percent; Leyte, 0.68 million mt or 4.46 percent; and Zamboanga del Norte, 0.60 million mt or 3.93 percent (Figure 1).

COFFEE

For the period 2007-2011, area planted and number of bearing trees of coffee continued to decrease annually by 0.88 percent and 0.90 percent, respectively (Table 36 & 37). In 2011, production of coffee of all varieties dropped to 88.53 thousand mt from 94.54 thousand mt in 2010 (Table 35). The decrease in output was due to reluctance of some farmers in Cavite to invest in fertilization, cultivation and weeding due to low price of coffee in the past years. Crop shifting in some areas in Maragusan, Compostela Valley to señorita banana and land use conversion in Batangas and in the municipalities of Tugbok and Toril in Davao City contributed to the drop in coffee production. Frequent rains adversely affected coffee production in Sultan Kudarat.

Arabica coffee. In 2011, production of Arabica coffee was 19 thousand mt (Table 40). This was 21.47 percent of the national coffee production of 88.53 thousand mt. (Figure 1). Area planted to Arabica coffee at 19.37 thousand hectares was 16.19 percent of the total area planted to coffee (Figure 2). Sultan Kudarat was the top producer with 10.15 thousand mt or 53.41 percent share in total Arabica production (Figure 3). The province had the largest area planted at 6.70 thousand hectares (Table 44).

Figure 1. Coffee: Percent Distribution of Production, by Variety, Philippines, 2011

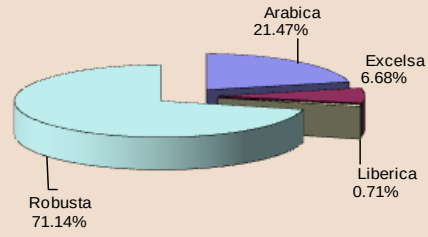

Figure 2. Coffee: Percent Distribution of Area Planted, By Variety, Philippines, 2011

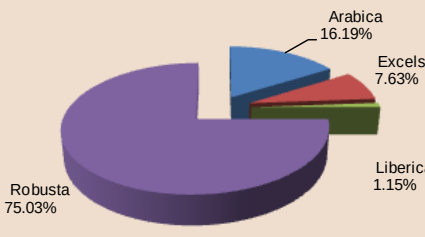

Figure 3. Arabica Coffee: Top Producing Provinces, Philippines, 2011

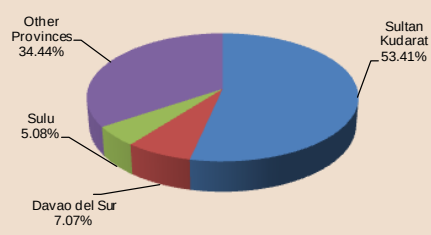
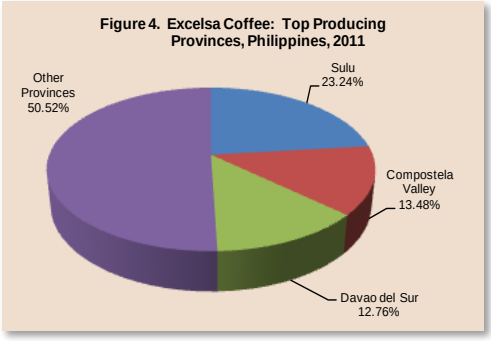
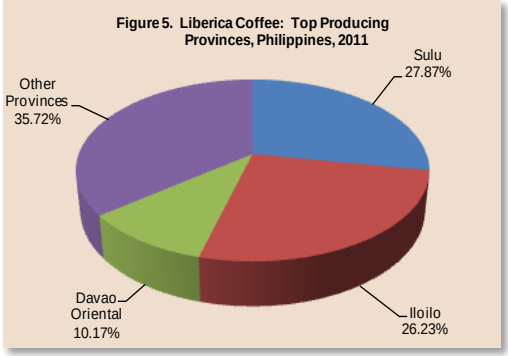


Excelsa coffee. Production of Excelsa coffee was recorded at 5.92 thousand mt in 2011 (Table 45). The major producers were Sulu, Compostela Valley and Davao del Sur, which accounted for 49.48 percent of the total Excelsa coffee production in 2011 (Figure 4). Batangas posted the largest area planted to Excelsa coffee at 1.44 thousand hectares (Table 49).





Liberica coffee. In 2011, production of Liberica coffee was 630 mt or 0.71 percent of the total coffee production of all varieties (Figure 1). Sulu and Iloilo were the major producers with combined share of 54.11 percent of the total Liberica production (Figure 5). Sulu recorded the largest area planted at 600 hectares or 43.53 percent of the total area planted to Liberica coffee (Table 54).

Robusta coffee. Production of Robusta coffee in 2011 at 62.98 thousand mt declined by 7.29 percent from 2010 production of 67.93 thousand mt. This variety was 71.14 percent of the total coffee production of 88.53 thousand mt in 2011 (Figure 1). The major producers were Sultan Kudarat, Compostela Valley and Bukidnon. Their combined output accounted for 40.11 percent of the country's total robusta coffee production (Figure 6). Area planted to Robusta coffee was 89.77 thousand hectares or 75.03 percent of the total area planted to coffee at 119.66 thousand hectares (Figure 2).

RUBBER

From 2007 to 2011, area planted to rubber grew annually by 9.85 percent (Table 61) and the number of mature trees, by 4.68 percent (Table 62). In 2011, rubber cup lump production reached 425.71 thousand mt which was 7.71 percent more than the 2010 output of 395.24 thousand mt. The higher production was due to the increased number of mature trees.

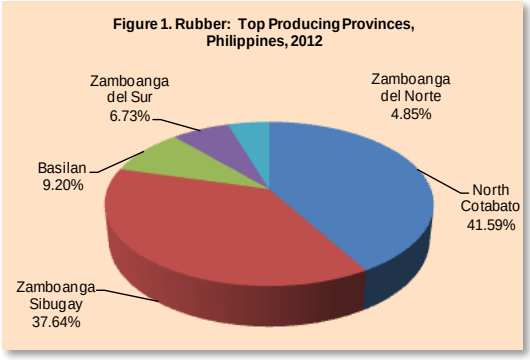

Figure 1. Rubber: Top Producing Provinces, Philippines, 2012

The top rubber producers in 2011 were North Cotabato with 158.18 thousand mt and Zamboanga Sibugay with 143.14 thousand mt. Their combined output was 70.78 percent of the national total rubber production (Figure 1). These two (2) provinces contributed 59.85 percent to the country's total area planted to rubber and 64.54 percent to the total number of mature trees.

SUGARCANE

Sugarcane production registered an average annual growth rate of 6.29 percent from 2007 to 2011. In 2011, production was 28.38 million mt which was higher by 58.27 percent compared to the 2010 output of 17.93 million mt (Table 65). The decrease was traced to the effects of dry spell during the planting stage in 2009 which affected 2010 harvests. Negros Occidental, the top producer shared 13.50 million mt or 47.57 percent of the country's sugarcane production (Figure 1). The province also reported the largest area harvested at 183 thousand hectares (Table 68).

The other major producers and their shares to the national production were: Bukidnon: 4.87 million mt or 17.16 percent; Batangas, 2.01 million mt or 7.38 percent; Negros Oriental, 1.99 million mt or 7.02 percent; and Iloilo, 1.26 million mt or 4.43 percent. The combined output of these provinces accounted for 36 percent of the total sugarcane production in 2011.

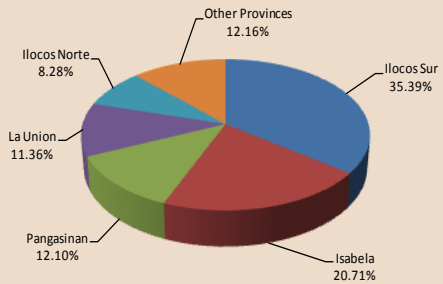
TOBACCO

Tobacco production from 2007 to 2011 increased annually by an average of 7.00 percent and area planted by 7.81 percent. In 2011, production was 44.94 thousand mt which was 10.89 percent higher than the 40.53 thousand mt of output in 2010 (Table 69). The increase was the result of crop shifting from corn, garlic, mongo and tomato due to market demand in the top producing provinces of Ilocos Norte and Ilocos Sur. The availability of technical and financial assistance from the National Tobacco Administration (NTA) and the Isabela Leaf in Isabela and Cagayan contributed to the higher output.

Ilocos Sur remained as the top tobacco producer with 15.91 mt sharing 35.39 percent in the national tobacco production in 2011. The other major producers and their shares were: Isabela, 9.31 thousand mt or 20.71 percent; Pangasinan, 5.44 mt or 12.10 percent; La Union, 5.11 mt or 11.36 percent; and Ilocos Norte by 3.72 mt or 8.28 percent (Figure 1).

In 2011, production of native tobacco was 11.55 thousand mt which was 7.25 percent more than the 2010 output of 10.77 thousand mt (Table 73). Native tobacco comprised 25.69 percent of all tobacco varieties in 2011 (Figure 2). Area planted also increased to 7.97 thousand hectares in 2011 from 7.14 thousand hectares in 2010 (Table 74). Isabela, Cagayan, La Union and Ilocos Sur were the major producers with combined share of 83.86 percent in the country's native tobacco production in 2011.

Figure 1. Tobacco: Top Producing Provinces, Philippines, 2011



Virginia tobacco production was estimated at 21.45 thousand mt or 13.84 percent above the 18.84 thousand mt output

in 2010. This accounted for 47.72 percent of the total tobacco production in 2011 (Figure 2). Ilocos Sur was the number one producer with 14.23 thousand mt or 66.33 percent share in the total Virginia tobacco production (Table 79) and 12.40 thousand hectares or 66.21 percent share in total area planted (Table 80).

In 2011, production of Other varieties of tobacco which was mostly Burley was recorded at 11.95 thousand mt. It was higher by 9.39 percent compared to the 10.93 thousand mt output in 2010. Other tobacco varieties contributed 26.59 percent to the country's total tobacco production in 2011 (Figure 2).

HIGHLIGHTS (FRUIT CROPS)

BANANA

The annual average growth of the country's banana production from 2007 to 2011 was 5.38 percent. From 7.48 thousand mt in 2007, production went up to 9.17 thousand mt in 2011 (Table 81). During the same period, area planted grew by an average of 0.76 percent annually (Table 82) and the number of bearing hills increased by 2.79 percent (Table 83).

The top three (3) banana producing provinces were Davao del Norte, Compostela Valley and Bukidnon (Figure 1). Their combined production was 44 percent of the country's total banana production of all varieties. Among these provinces, production increment in 2011 was posted only in Davao del Norte at 2.24 percent or 1.6 thousand mt higher than the previous year's record. Increased number of bearing hills was noted in the province.

By province, the largest area planted to banana was recorded in Davao del Norte at 35,933 hectares. This was eight (8) percent of the country's total area planted to banana. Compostela Valley, was next with five (5) percent share. With four (4) percent share records were Bukidnon, Oriental Mindoro and Maguindanao (Figure 2).

Figure 1. Banana: Top producing provinces, Philippines, 2011

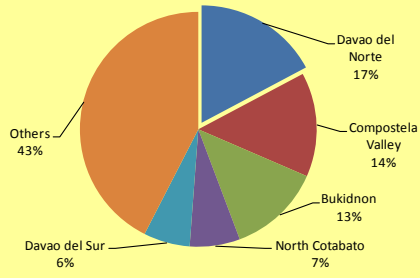

Figure 2. Banana: Top producing provinces based on area, Philippines, 2011

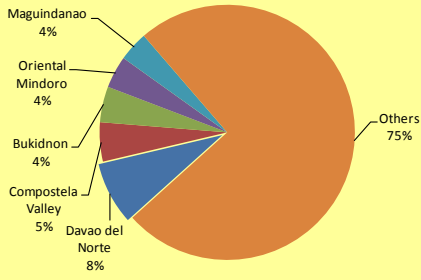
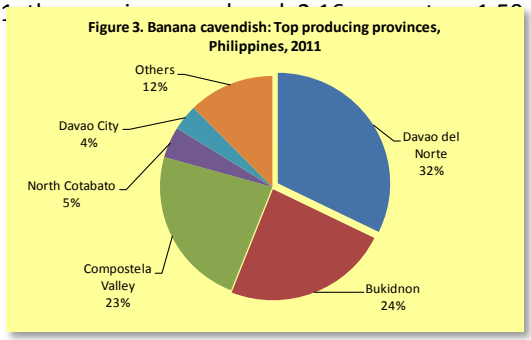
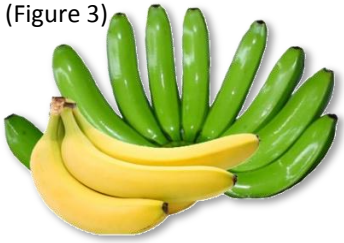


Cavendish variety. From 2007 to 2011, cavendish banana production posted an annual average growth of 10 percent. Area planted to cavendish banana during the same reference years, was increasing by 2.04 percent and the number of bearing hills by 5.38 percent annually. Cavendish banana

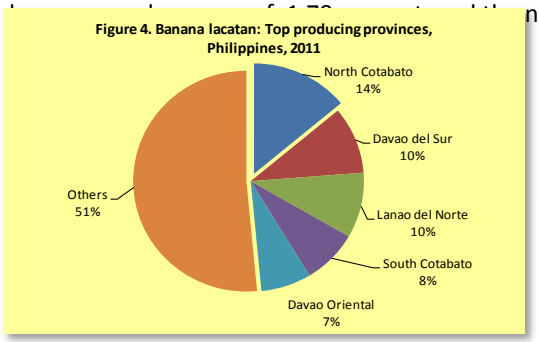
accounted for 51 percent of total banana production, all varieties in 2011. It was 1.86 percent higher or 4.69 thousand mt from last year's production of 4.6 thousand mt. This was attributed to the increased area harvested and bigger fruits in Davao del Norte. In 201[illegible] thousand mt over its 2010 level of 1.48 thousand mt. The top three (3) cavendish banana producing provinces were Davao del Norte, Bukidnon and Compostela Valley. They had a combined contribution of 79 percent to the national cavendish banana production (Figure 3)





The largest area planted to cavendish banana in 2011 was 29,136 hectares or 36 percent of the total area planted to cavendish banana in Davao del Norte. Bukidnon accounts for 16,490 hectares or 21 percent of the country's area planted to cavendish banana.

Lacatan variety. From 2007 to 2011, lacatan banana production increased by an average of 1.44 percent annually. For the same period, area planted expanded [illegible]

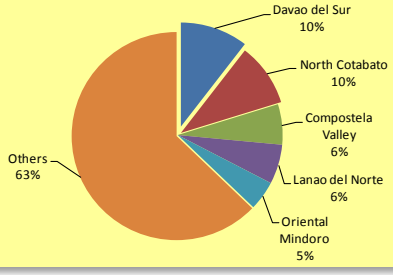


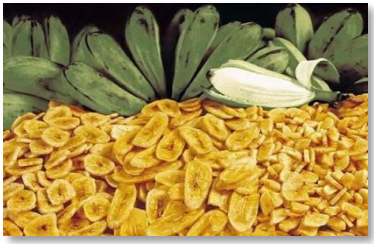
percent. Lacatan banana production in 2011 at 926.7 thousand mt increased by 0.56 percent from last year's level of 921.6 thousand mt. The top lacatan banana producing province was North Cotabato with 129.3 thousand mt of output or 14 percent of the country's total production (Figure 4). This was attributed to the bigger fruits developed due to sufficient rains and recovery from the drought in the previous year. The second top producer with a production of 90.96 thousand mt was Davao del Sur which shared 10 percent in the total lacatan banana production. The province produced 0.81 percent more than its 2010 level.

The largest area planted to lacatan banana was 4,150 hectares in Davao Oriental. This was 7.28 percent of the country's total area planted to lacatan banana. The other provinces with large areas planted to lacatan banana were Oriental Mindoro, North Cotabato, Davao del Sur and Maguindanao. All these five (5) provinces accounted for 33 percent of the country's area planted to lacatan banana.

Saba variety. From 2007 to 2011, saba banana production grew by an annual average of 2.38 percent while area planted inched up by an annual average of 0.45 percent.

Figure 5. Banana saba: Top producing provinces, Philippines, 2011





In 2011, saba banana production at 2.62 thousand mt was 29 percent of the national banana production. The 2011 production was 0.60 percent lower than the previous year's record. Davao del Sur and North Cotabato, the top two (2) producing provinces had a combined contribution of about 20 percent to the total saba banana production (Figure 4). The positive growth was due to increase in area harvested in Davao del Sur. Bigger fruits developed due to sufficient rains and recovery from the drought in the previous year bought the production increment in North Cotabato.

In terms of area planted to saba banana, the top five (5) provinces were Oriental Mindoro, Maguindanao, Isabela, Iloilo and Davao del Sur. These provinces contributed 21.05 percent in the 2011 production in the country.

CALAMANSI

The country's calamansi production from 2007 to 2011 dropped by an annual average rate of 2.45 percent while its area planted increased by an annual average rate of 0.72 percent.

Calamansi production in 2011 was 182.6 thousand mt or 3.07 percent lower than the 2010 level of 188.3 thousand mt. Oriental Mindoro remained the top calamansi producer.It produced 104.4 thousand mt in 2011 and shared 57 percent in the country's calamansi production (Figure 1). Production in the province at 104.4 thousand mt decreased by 3.90 percent from the 2010 level. This was due to the frequent rains during the flowering stage. The province has also the largest area planted to calamansi at 7,325 hectares or 35 percent of the country's total area planted to calamansi in 2011 (Figure 2). This was higher than the area planted of 7,323 hectares in 2010. Quezon, Nueva Ecija, North Cotabato and Davao del Norte, were the other major calamansi producing provinces in 2011. These five (5) provinces contributed 71 percent to the country's total calamansi production.

Figure 1. Calamansi: Top producing provinces , Philippines, 2011

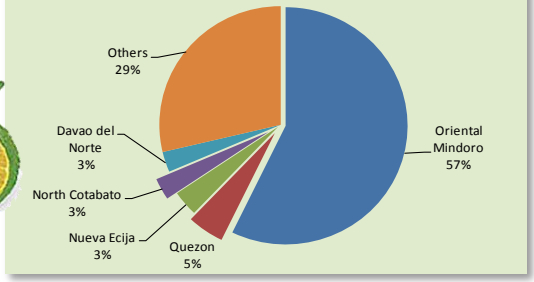

Figure 2. Calamansi: Top producing provinces based on area, 2011

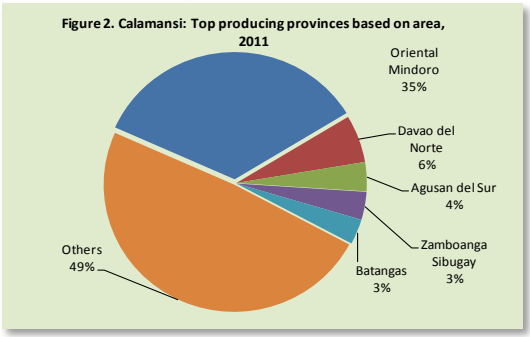

In terms of area planted, the leading other provinces were Davao del Norte Agusan del Sur, Zamboanga Sibugay and Batangas. The combined contribution of the five (5) provinces was 51 percent to the total area planted to calamansi in the country.

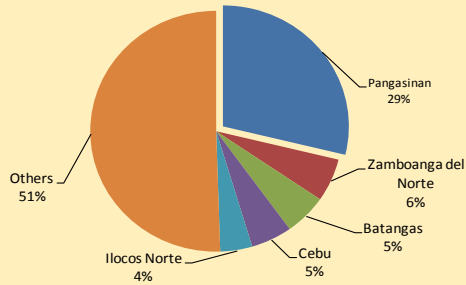
MANGO

During the period 2007 to 2011, the country's mango production went down by an annual average of 5.98 percent. Area planted moved up annually at an average of 0.40 percent. The number of bearing trees grew by an average of 1.48 percent.

In 2011, mango production was 788.1 thousand mt, 4.55 percent lower than the 2010 level. This was attributed to the less flower induction in Pangasinan, the top mango producing province. In Pangasinan, production at 226.8 thousand mt in 2011 posted a decreased of 7.27 percent from the 2010 record. The province shared 29 percent in the country's total mango production (Figure 1). It had also the largest area planted to mango at 13,739 hectares or 7.34 percent of the national level.

Other mango producing provinces were Zamboanga del Norte, Batangas, Cebu and Ilocos Norte. The total share of the five (5) provinces in the national production was 49 percent. Apart from Pangasinan, the provinces with largest areas planted to mango were Davao del Sur, Batangas, Zamboanga del Norte and Nueva Ecija. These top five provinces had a combined share of 33 percent in the country's total area planted to mango.

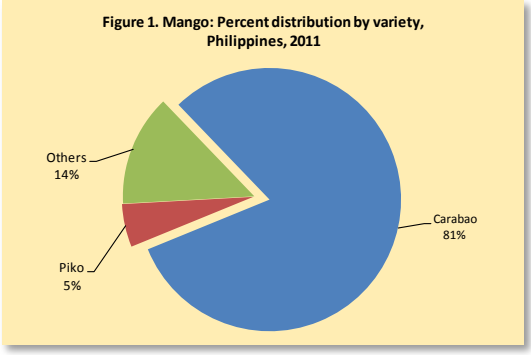
Figure 1. Mango: Top producing provinces, Philippines, 2011



Carabao variety. The drop in carabao mango production during the reference year, 2007-2011, averaged 5.90 percent. The area planted during the same period expanded by an annual average of 0.69 percent and the number of bearing trees increased by 2.05 percent.

In 2011, carabao mango production was 639 thousand mt. This was down by 4.57 percent from the 2010 level. This variety comprised 81 percent of the total mango production in 2011. The output of

Pangasinan at 203.6 thousand mt or 32 percent of the country's production. With the production from the provinces of Cebu, Zamboanga del Norte, Batangas and Iloilo, their combined share was 53 percent of the total carabao mango production (Figure 2).



Davao del Sur, Pangasinan, Batangas, Zamboanga del Norte and Maguindanao were the leading provinces in terms of area planted to carabao mango. They collectively shared 35 percent in the total area planted to carabao mango of the country. Davao del Sur, has an area of 12,305 hectares.

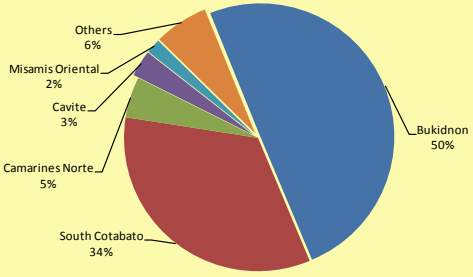
PINEAPPLE

The annual average increment of pineapple production from 2007 to 2011 was 2.83 percent and that of area planted was 2.07 percent.

Pineapple production in 2011 was 2,246.8 thousand mt or 3.58 percent higher than 2010. Bukidnon was the top producing province with an output 1,119 thousand mt in 2011 (Figure 1). Its production was 8.86 percent higher than in 2010. This was attributed to the increase in area harvested from the commercial farms of Del Monte, Lapanday Agricultural and Development Corporation, Mount Kitanglad Agricultural Development Corporation, Davao Ventures Corporation and Dole Philippines. Bukidnon contributed 50 percent to the country's pineapple production. South Cotabato followed with a production of 759.1 thousand mt or 34 percent of the total pineapple production.

Figure 1. Pineapple: Top producing provinces, Philippines, 2011



In terms of area planted to pineapple, South Cotabato was the leading province with 21,710 hectares or 37 percent of the total area planted to pineapple. Bukidnon followed with 20,500 hectares or 35 percent of the country's area planted to pineapple.

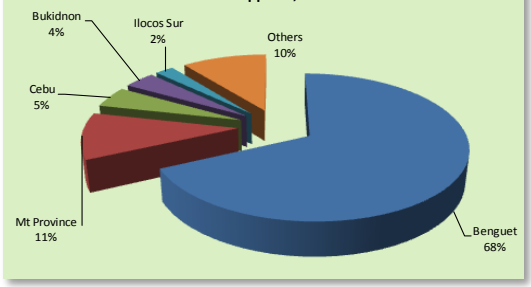
HIGHLIGHTS (VEGETABLES)

CABBAGE

Both area harvested and production moved irregularly from 2007 to 2011. While increases were noted in 2008 and 2010, decreases occurred in 2009 and 2011. In 2011, cabbage production at 125.,31 thousand mt was 2.83 percent lower than the 2010 output of 128.96 thousand mt. This was attributed to the effects of typhoons Mina, Pedring and Quiel in Benguet, the top cabbage producing province. Benguet production in 2011 was 85.21 thousand mt which comprised 68 percent of the country's cabbage production. Mountain Province, ranked second, produced 13.23 thousand mt and shared 11 percent in the total cabbage production. The combined contribution of these two provinces was 79 percent to the national cabbage production (Figure 1a).

Figure 1a. Cabbage: Top producing provinces, Philippines, 2011



In 2011, area harvested was 8,550 hectares. It contracted by 13 percent from the 2010 record of 8,561 hectares. In Benguet, area harvested was 4,440 hectares which accounted for the 52 percent of the total area harvested to cabbage. Mountain Province with harvest area of 969 hectares shared 11 percent in the country's area harvested to cabbage (Figure 1b).

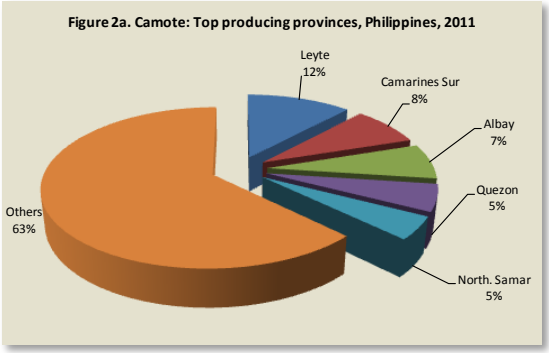
CAMOTE

Camote production was on the downtrend from 2007-2011, the annual average rate of reduction on camote production was 2.59 percent or from the 2007 output of 573.73 thousand mt to its 2011 level of 516.34 thousand mt. Area harvested was on a downward trend at an annual average rate of 3.08 percent in the same reference years In 2011, the production of camote was a 4.61 percent drop from its 2010 production output of 541.27 thousand mt.



The top five camote producers were Leyte, Camarines Sur, Albay, Quezon and Northern Samar (Figure 2a). These provinces produced 192.13 thousand mt with a combined contribution of 37 percent of the national camote production. The camote production in Leyte, the top camote producer, reduced by 0.75 percent as this was affected with weevil due to the continuous rainfall in its production areas.

Area harvested to camote production, likewise, shrunk from 109,438 hectares in 2010 to 103,704 hectares in 2011. The top five provinces with the largest area harvested to camote were Camarines Sur, Northern Samar, Southern Leyte, Bohol and Albay (Figure 2b). These provinces had a total of 34,248 hectares or 33 percent of the country's area harvested to camote.

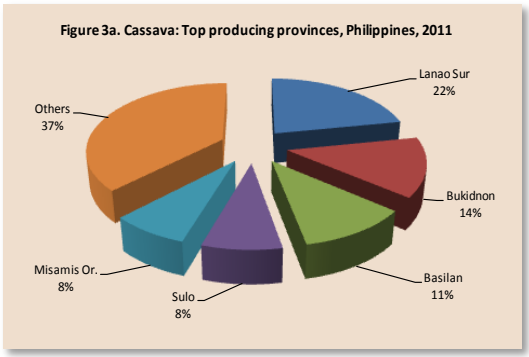
CASSAVA

Area harvested and production were increasing during the period 2007-2011. The annual average growth rate of cassava production was 4.25 percent while that of area harvested was 1.36 percent. Cassava production in 2011 was 2,209.7 thousand mt or 5.15 percent higher than the 2010 production of 2,101.4 thousand mt. Lanao del Sur was the top cassava producer with 485.7 thousand mt of output in 2011. It shared 22 percent in the country's cassava production (Figure 3a). The other major producing provinces were Bukidnon, Basilan, Sulu and Misamis Oriental. Their total cassava production was 1,382.61 thousand mt and contributed 63 percent to the national cassava production.

Figure 3a. Cassava: Top producing provinces, Philippines, 2011



Area harvested was 221,235 hectares in 2011. Lanao del Sur accounted for 29,220 hectares or 13 percent of the country's area harvested (Figure 3b). The other provinces with the biggest areas harvested to cassava, were Sulu, Tawi-tawi, Basilan, and Camarines Sur. These top five (5) provinces had a combined share of 110,169 hectares or 50 percent to the national area harvested to cassava.

EGGPLANT

Production of eggplant during the reference years, 2007-2011 fluctuated an annual average rate of 0.21 percent. Area contracted by an annual average rate of 0.27 percent. In 2011, eggplant production was 207.99 thousand mt about 0.12 percent lower than the 2010 record. The top eggplant producer in 2011 was Pangasinan with total production of 64.1 thousand mt or 31 percent of the country's eggplant production. Quezon, Iloilo, Isabela and Cagayan were the other top producing provinces to complete the top five (5) eggplant producing provinces (Figure 4a). The total eggplant production in these provinces was 118.67 thousand mt or 57 percent of the total eggplant production.

In 2011, area harvested was 21,377 hectares. In terms of area, the top five (5) provinces were Pangasinan, Nueva Ecija, Isabela, Cebu and Iloilo (Figure 4b). These provinces had 8,097 hectares and comprised 38 percent of the country's area harvested to eggplant.

GARLIC

Production from 2007 to 2011 was continuously dropping and the annual average rate of decrease was 5.29 percent. Area harvested to garlic was also on a downward trend at an annual average rate of 7.35 percent. In 2011, garlic production was 9.06 thousand mt, 5.30 percent lower than the 2010 production of 9.56 thousand mt. Ilocos Norte contributed the bulk of the 2011 output at 5.76 thousand mt with area harvested of 1,935 hectares (Figure 5a). The province contributed 64 percent to the country's garlic production and 68 percent of the total area harvested to garlic. Mindoro Occidental was the second top garlic producer with 2.1 thousand mt of production from its 442 hectares (Figure 5b). The total area harvested to garlic across the country in 2011 was 2,830 hectares.

MONGO

Production of mongo from 2007 to 2011 fluctuated with an upward trend and an average rate of 3.73 percent annually. Area harvested registered the same trend with 3.96 percent per year. In 2011, mongo production was 32.96 thousand mt or 21.83 percent higher than the 2010 output of 27.06 thousand mt. Some 9.51 thousand mt or 29 percent of the national mongo production were harvested in Isabela, the top mongo producer (Figure 6a). Its 2011 output was 172 percent higher than its 2010 produce of 3.49 thousand mt. This was attributed to the increase in area harvested due to the support of LGU. Other major contributors to mongo production were Pangasinan, Ilocos Norte, Maguindanao and Tarlac. Their total mongo production was 24.6 thousand mt with a combined share of 75 percent to mongo production of the country.

Figure 6a. Mongo: Top producing provinces, Philippines, 2011

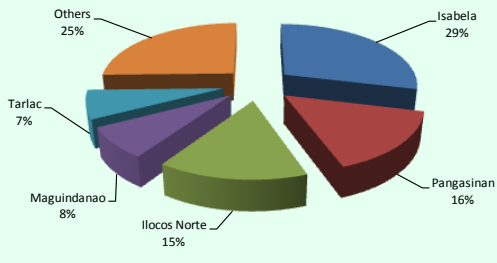

Figure 6b. Mongo: Top producing provinces based on area, Philippines, 2011

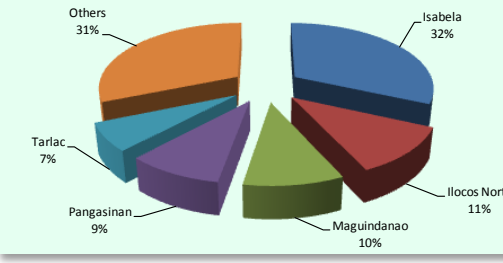

In 2011, mongo was harvested in 45,283 hectares. About 32 percent or 14,362 hectares were harvested in Isabela (Figure 6b). In terms of area harvested, the other provinces with large areas were Ilocos Norte, Maguindanao, Pangasinan and Tarlac. These five (5) provinces comprised 69 percent of the area harvested of mongo in the country.

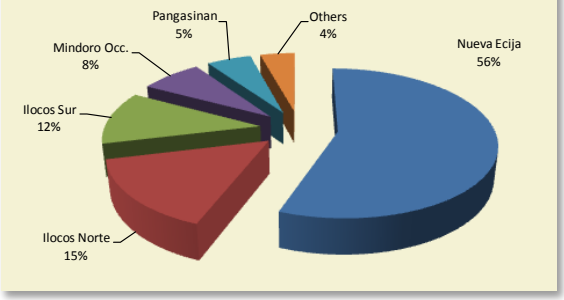
ONION

From 2007 to 2011, onion production showed a fluctuating downward trend and the annual average decrease was 2.96 percent. Area harvested, likewise, dropped by an annual average rate of 1.90 percent. Onion production in 2011 was 128.39 thousand mt and posted a 5.16 percent decrease from the 2010 output of 135.38 thousand mt. Onion production in Nueva Ecija , the top producer, was 73.5 thousand mt. This was 57 percent of the country's onion production (Figure 7a). The other major producing provinces were Ilocos Norte, Ilocos Sur, Mindoro Occidental and Pangasinan. These provinces had a total production of 123.0 thousand mt and a combined contribution of 96 percent to the national onion production.

Figure 7a. Onion: Top producing provinces, Philippines, 2011



In 2011, the total area harvested of onion was 14,641 hectares. About 56 percent or 8,170 hectares were in Nueva Ecija (Figure 7b). The total area harvested in the major onion producing provinces was 96 percent in the country's total area harvested of 14,020 hectares.

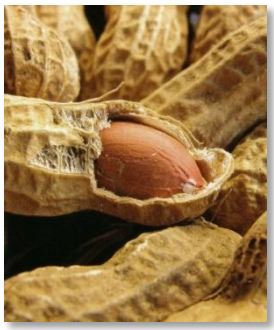
PEANUT



During the reference years 2007 -2011, production of peanut dropped by an annual average rate of 1.16 percent. Area harvested of peanut on was likewise on a downward trend at an annual average rate of 1.25 percent. The country's peanut production in 2011 was 29.7 thousand mt harvested from an area of 26,902 hectares. In 2011, Pangasinan was the top peanut producer with 5.66 thousand mt or 19 percent of the national peanut production (Figure 8a). The other major producing provinces were La Union, Lanao del Norte, Isabela and Cagayan. These top five provinces had a combined contribution of 50 percent of the national total peanut production nationwide.

Figure 8a. Peanut: Top producing provinces, Philippines, 2011

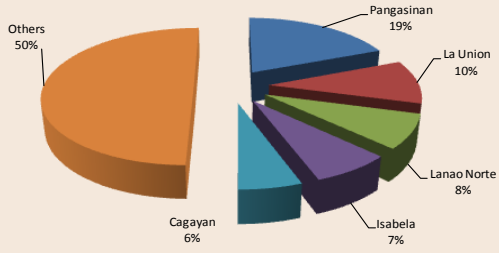


Figure 8b. Peanut: Top producing provinces based on area, Philippines, 2011

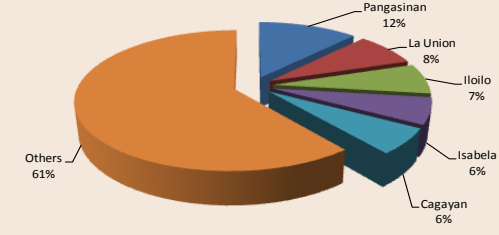

In Pangasinan, area harvested at 3,265 hectares was the largest among all producing provinces. It shared 12 percent of the total area harvested of peanut (Figure 8b). The other provinces with the largest area harvested of peanut were La Union, Iloilo, Isabela and Cagayan. Their total area harvested was 10,521 hectares which comprised 39 percent of the country's area harvested to peanut.

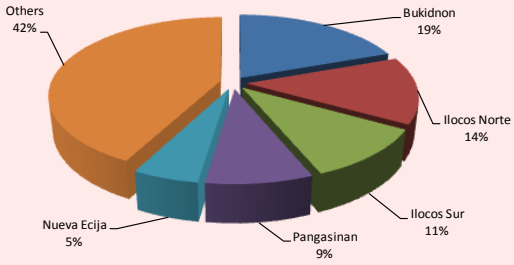
TOMATO

Tomato production was going up by an annual average rate of 1.92 percent from 2007-2011. During the same period, area harvested was increasing by an annual average rate of 0.01 percent. About 203.58 thousand mt of tomato was produced in 2011. Some 19 percent or 39.53 thousand mt came from Bukidnon (Figure 9a). Ilocos Norte, Ilocos Sur, Pangasinan and Nueva Ecija were the other major tomato producers. These provinces produced a total of 117.2 thousand mt with a combined share of 58 percent to the country's tomato production.

Figure 9a. Tomato: Top producing provinces, Philippines, 2011



2011, area harvested was 17,548 hectares. Of this, 11 percent or 2,000 hectares were in Bukidnon (Figure 9b). Tarlac, Nueva Ecija, Ilocos Norte and Ilocos Sur had a combined total area harvested of 7,413 hectares. This comprised 42 percent of the country's area harvested to tomato.
